

Contents

1	Introduction.	1
1.1	From Quantum Theory to Quantum Mechanics	1
1.2	What We Do in This Book	5
	References	6
Part I Born–Jordan Quantization: Physical Motivation		
2	On the Quantization Problem.	9
2.1	Introduction.	9
2.2	The Ordering Problem	11
2.3	What Is Quantization?	14
2.4	Motivation for Born–Jordan Quantization	17
	References	20
3	Quantization of Monomials.	23
3.1	Polynomial Algebras.	23
3.1.1	General Considerations and Notation	23
3.1.2	Commutation Relations.	25
3.2	Some Common Orderings	25
3.2.1	Weyl Ordering.	26
3.2.2	Born–Jordan Ordering.	28
3.2.3	The Relation Between $\text{Op}_W(x^r p^s)$ and $\text{Op}_{\text{BJ}}(x^r p^s)$.	29
3.2.4	Shubin’s τ -Ordering	30
3.3	General Quantization Axioms for Monomials.	31
3.3.1	The Domingo–Galapon Formula	31
	References	34
4	Basic Hamiltonian Mechanics	37
4.1	Hamiltonian Dynamics	37
4.2	Free Canonical Transformations	39
4.2.1	Free Symplectic Matrices	39
4.2.2	Hamilton’s Two-Point Characteristic Function	40

4.3	The Action of a Dynamical System	43
4.3.1	The Poincaré–Cartan Invariant	43
4.3.2	The Action Functional	43
4.4	Short-Time Action	46
4.4.1	On “Mid-Point Rules”	46
4.4.2	A Correct Short-Time Approximation	47
4.4.3	The Averaged Hamiltonian \overline{H}	49
4.4.4	Short-Time Approximations: The General Case	50
	References	55
5	Wave Mechanics and the Schrödinger Equation	57
5.1	Matter Waves	57
5.1.1	The Free Particle	57
5.1.2	The Free Propagator	60
5.2	The General Case.	61
5.2.1	The Abstract Schrödinger Equation.	61
5.2.2	The Approximate Wavefunction.	62
5.2.3	Back to Schrödinger’s Equation	65
	References	69
 Part II Mathematical Aspects of Born–Jordan Quantization		
6	The Weyl Correspondence	73
6.1	Definitions and Basics	73
6.1.1	Notation and Terminology	73
6.1.2	Traditional Definition of Weyl Operators (in Physics)	74
6.1.3	Traditional Definition of Weyl Operators (in Mathematics)	75
6.2	Heisenberg and Grossmann–Royer Operators.	76
6.2.1	Definition and Discussion	76
6.2.2	Symplectic Fourier Transform	78
6.2.3	Dynamical Interpretation of the Heisenberg Operator	80
6.3	Weyl Operators: Harmonic Analysis.	81
6.3.1	Definition of a Weyl Operator	82
6.3.2	Harmonic Analysis	83
6.3.3	The Kernel of a Weyl Operator	84
6.4	Two Examples.	86
6.4.1	The Weyl Quantization of Monomials.	86
6.4.2	Physical Hamiltonians.	86
6.5	L^2 -Boundedness of Weyl Operators	88
6.6	Adjoins and Products.	90

6.6.1	The (Formal) Adjoint of a Weyl Operator	91
6.6.2	Composition Formulas	91
	References	93
7	The Cohen Class	95
7.1	The Wigner and Ambiguity Transforms	95
7.1.1	The Cross-Wigner Transform	95
7.1.2	The Cross-Ambiguity Function	98
7.1.3	A Reconstruction Formula	101
7.1.4	Relation with the Weyl Correspondence	102
7.2	The Cohen Class	104
7.2.1	Definition and General Properties	104
7.2.2	The Marginal Conditions	106
7.2.3	Generalization of Moyal's Identity	108
7.2.4	A Representation Result	109
	References	111
8	Born–Jordan Quantization	113
8.1	The Born–Jordan Kernel θ_{BJ}	113
8.1.1	Definition and First Properties	113
8.1.2	The Moyal Identity Is Not Satisfied	116
8.1.3	Some Properties of the sinc Function	117
8.2	Born–Jordan Operators	118
8.2.1	Definition and First Properties	118
8.2.2	The Relation Between Born–Jordan and Weyl Operators	121
8.3	On the Invertibility of Born–Jordan Quantization	122
8.3.1	A Non-injectivity Result	122
8.3.2	The Case of Monomials	123
8.3.3	The General Case	125
	References	127
9	Shubin's Pseudo-Differential Calculus	129
9.1	Definition and First Properties	129
9.1.1	The Kernel of a τ -Operator	129
9.1.2	The Case of Monomials	131
9.2	The τ -Wigner and Ambiguity Transforms	132
9.2.1	The Operators $\widehat{T}_\tau(z_0)$ and $\widehat{T}_{\text{GR},\tau}(z_0)$	132
9.2.2	The Associated Transforms	135
9.2.3	Definition of Wig_τ and Amb_τ	135
9.2.4	Properties of Wig_τ and Amb_τ	138
9.3	Back to Shubin's Operators	141
9.3.1	Harmonic Decomposition of τ -Operators	141
9.3.2	Products, Transposes, Adjoints	143
	References	145

10	Born–Jordan Pseudo-Differential Operators	147
10.1	Born–Jordan Pseudo-Differential Operators	147
10.1.1	Definition and Justification	147
10.1.2	Born–Jordan and Weyl Operators	149
10.2	The Born–Jordan Transform Revisited	151
10.2.1	Born–Jordan Versus Weyl	152
10.3	Tensor Products of Observables	154
10.3.1	Weyl Operators	154
10.3.2	The Born–Jordan Case	156
10.3.3	Illustration: The “Angular Momentum Dilemma”	157
	References	159
11	Weak Values and the Reconstruction Problem	161
11.1	The Notion of Weak Value	161
11.1.1	Motivation and Definition	161
11.1.2	Weak Values and the Cohen Class: The Phase Space Approach	163
11.2	A Complex Probability Density	164
11.2.1	A General Result Using the Cohen Class	164
11.2.2	The Born–Jordan Case	166
11.3	The Reconstruction Problem	167
11.3.1	A General Reconstruction Formula	168
11.3.2	The Born–Jordan Case: An Unsolved Problem	169
	References	170

Part III Some Advanced Topics

12	Metaplectic Operators	173
12.1	The Symplectic Group $\text{Sp}(n)$	173
12.1.1	The Metaplectic Representation of $\text{Sp}(n)$	176
12.2	The Weyl Representation of Metaplectic Operators	177
12.2.1	The Symplectic Cayley Transform	177
12.2.2	A Factorization Result	178
12.2.3	Metaplectic Operators as Weyl Operators	179
12.3	The τ -Metaplectic Group $\text{Mp}_\tau(n)$	180
12.3.1	The Operators R_τ	180
12.3.2	Definition of $\text{Mp}_\tau(n)$	183
	References	184
13	Symplectic Covariance Properties	185
13.1	Symplectic Covariance of Weyl Operators	185
13.1.1	The Heisenberg and Grossmann–Royer Operators Revisited	185
13.1.2	Weyl Operators	187
13.1.3	Affine Covariance Properties	189

13.2	The Case of τ -Operators	190
13.2.1	A Covariance Result.	190
13.2.2	Application to the τ -Wigner Function	191
13.3	The Case of Born–Jordan Operators	193
13.3.1	The Born–Jordan Metaplectic Group.	193
13.3.2	The Born–Jordan Wigner Transform Revisited.	196
	References	196
14	Symbol Classes and Function Spaces.	199
14.1	Shubin’s Symbol Classes	199
14.1.1	The Shubin Symbol Classes Γ_ρ^m and $\Pi_\rho^{m,m'}$	200
14.1.2	Asymptotic Expansions of Symbols	202
14.1.3	A Reduction Result	203
14.1.4	First Continuity Results.	206
14.2	Modulation Spaces	207
14.2.1	The Modulation Spaces M_s^q	207
14.2.2	The Generalized Sjöstrand Classes	209
14.3	Applications to Born–Jordan Operators	212
14.3.1	A Fundamental Result.	212
14.3.2	Application: Some Boundedness Results	214
	References	215
	References	217
