1	Introduction	1
1.1	Foreword	1
1.2	Thesis Structure	5
1.3	Publications	7
	References	8
2	Background	9
2.1	Basic Definitions	9
2.2	Convex Sets	10
2.2.1	Set Operators	10
2.2.2	Commonly Referred Sets	11
2.3	Functions and Norms	12
2.4	Convex Optimisation	16
2.4.1	Conic Programming	16
2.4.2	Duality	17
2.4.3	Optimality Conditions	18
2.4.4	Degeneracy and Multiple Optima	19
2.4.5	Exact Penalty Functions	20
2.5	Constrained Control Systems in Discrete-Time Domain	21
2.5.1	Stability Definitions	22
2.5.2	Set-Theoretic Control	25
2.6	Model Predictive Control	27
2.6.1	Standard MPC Formulation	27
2.6.2	Considered Set-up	29
2.6.3	Recursive Feasibility and Invariance	29
2.6.4	Sufficient Conditions for Asymptotic Stability	30
2.6.5	Terminal Ingredients	31
2.6.6	Domain of Attraction	35
2.6.7	Sufficient Conditions for Intrinsic Robustness	36

2.6.8	Explicit Solution of Linear Quadratic MPC	37
2.6.9	Robust MPC and Soft Constraints	40
2.6.10	MPC for Tracking	40
	References	42
3	Principles of LASSO MPC	47
3.1	LASSO Regression and ℓ_1 -Regularised Least Squares	47
3.1.1	Considered Regularised Regressors	48
3.1.2	Solution Characteristics	49
3.1.3	Control-Related Applications.	50
3.2	Formulation of ℓ_{asso} -MPC	51
3.2.1	Version 1: “Regularised LQR”	52
3.2.2	Version 2: General Form	53
3.3	Initial Comparison with Quadratic, ℓ_1 and ℓ_∞ MPC	53
3.3.1	Example 1: Sparsity in the Actuator Space	53
3.3.2	Example 2: Uncertainty and Sparsity in Time	55
3.3.3	Geometric Interpretation of the Solution Behaviour	59
3.4	Conclusions	62
	References	63
4	Version 1: ℓ_1-Input Regularised Quadratic MPC.	65
4.1	Introduction	65
4.2	Regularised Input Behaviour	66
4.2.1	Unconstrained Solution and Input Dead-Zone	67
4.3	Implementation for LTI Models.	69
4.3.1	Using Slack Variables	69
4.3.2	Splitting Actuators for Strict Convexity	70
4.4	Explicit Solution for LTI Models.	71
4.4.1	Example 1: Soft Thresholding and Dead-Zone.	73
4.4.2	Example 2: Solution Path for All States	74
4.5	Closed-Loop Stability Analysis	75
4.5.1	General Regularisation Penalty and Ultimate Boundedness	76
4.5.2	Partial Regularisation and Asymptotic Stability	81
4.5.3	Computational Aspects for LTI and Nonlinear Systems	82
4.6	Conclusions	82
	References	83
5	Version 2: LASSO MPC with Stabilising Terminal Cost	85
5.1	Chapter Outline	85
5.2	Terminal Cost Using LMIs and Norm Inequalities	86
5.2.1	ℓ_1 -Terminal Cost	86
5.2.2	Mixed ℓ_1/ℓ_2^2 -Terminal Cost.	87
5.2.3	Computational Issues	88

5.3	Terminal Cost Using Minkowski Functions	89
5.3.1	Minkowski Functions	90
5.3.2	Computation of the Terminal Cost	90
5.4	Terminal Set and Domain of Attraction	93
5.4.1	The Considered Method: Control at the Vertices	93
5.4.2	Alternative Methods	94
5.5	Input Sparsity and Dead-Zone	95
5.6	Example: Maximum DOA and Enhanced Optimality	97
5.6.1	The DOA/Optimality Tradeoff	97
5.6.2	Simulation Results	98
5.7	Terminal Ingredients for Nonlinear Systems	101
5.7.1	Mixed ℓ_1/ℓ_2^2 -Terminal Cost	102
5.7.2	Minkowski Function Terminal Cost	104
5.7.3	Terminal Set and Domain of Attraction	106
5.8	Conclusions	109
	References	109
6	Design of LASSO MPC for Prioritised and Auxiliary Actuators . . .	111
6.1	Introduction	111
6.2	Partial Regularisation	112
6.2.1	Existence of the Nominal Operation Zone	112
6.2.2	Formulation as a mpQP	113
6.2.3	Limitations Due to Constraints	115
6.2.4	Computation of the Regularisation Penalty	116
6.3	Full Regularisation	122
6.3.1	Existence of the Nominal Operations Zone	122
6.3.2	Formulation as a mpQP	123
6.3.3	Computation of the Regularisation Penalty	125
6.4	Example 1: Computation of the Exact Penalty	127
6.5	Example 2: Limits of the Technique	131
6.6	Example 3: Multi-source Distribution	132
6.7	Example 4: Aircraft Roll Control	136
6.7.1	Nominal Altitude and Airspeed	137
6.7.2	Different Altitude and Airspeed	138
6.7.3	Considerations	142
6.8	Conclusions	142
	References	144
7	Robust Tracking with Soft Constraints	145
7.1	Introduction	145
7.2	ℓ_{asso} -MPC for LTI Tracking	146
7.2.1	Nominal Asymptotic Stability	149
7.3	Computation of the Terminal Constraint	153
7.3.1	Using the Maximal Admissible Set	153
7.3.2	Using the Control at the Vertices	154

7.4	Computation of the Terminal Penalty	155
7.5	Enlarged Domain of Attraction and Local Optimality	157
7.6	Robustness Bound and Local ISS Gain.	157
7.6.1	Achievable Steady States and Constraint Violation.	163
7.7	Illustrative Example	164
7.8	Conclusions	169
