

Contents

1	Introduction	1
1.1	Design of Industrial Products	1
1.2	Which Are the Motives for Design Automation?	3
1.3	Modelling and Simulation of the Design Process	4
1.4	Intelligent Computer Systems	6
1.4.1	Declarative Representation of Knowledge or Constraints	7
1.4.2	Representation of Implicit Knowledge by Computational Intelligence	8
1.4.3	Procedural Programming for Mathematical Modelling	8
1.4.4	The Causal Triangle	9
	References	9
2	Industrial Products and How They Are Developed	11
2.1	Man-Made Objects and the Laws of Nature	11
2.2	A Generic Process for Product Development	13
2.3	Design Tasks with Potential for Automation	18
2.3.1	Tasks Suitable for Automation	18
2.3.2	Design for Variety, DFV	21
2.4	Investing in New Products	23
	References	25
3	Computerised Methods to Design for Variety, DFV	27
3.1	What Are the Deliverables of the Design Process?	27
3.1.1	Definition of Product Geometry	29
3.1.2	Definition of Product Structure and Technical Specifications	33
3.2	Parametric Design	34
3.3	Configuration Design	39
3.3.1	Modularised Products	40
3.3.2	Product Structure for Variant Design	42
3.4	Generative and Hybrid Design	45
	References	47

4	Clarifying, Idealising and Modelling of Engineering Knowledge	49
4.1	What Is Knowledge?	49
4.2	Thinking Inside the Box.	50
4.3	Idealisation of Product Knowledge	51
4.4	Characterisation of Engineering Knowledge	53
4.5	Modeling of Knowledge for Computer Processing	55
4.5.1	The Computer and the Human Brain	55
4.5.2	Representation of Knowledge	58
	References	58
5	Problem Structure and Knowledge Processing	61
5.1	Well-Structured and Ill-Structured Design Tasks.	61
5.2	Fundamentals of Graph Theory and Dependency Structure Matrices	63
5.2.1	Definitions in Graph Theory.	64
5.2.2	Tree Structures	66
5.2.3	The Dependency Structure Matrix (DSM).	66
5.3	Problem Structure and Choice of Solution Principles	69
5.4	Problem Complexity.	70
	References	71
6	Representation and Processing of Explicit Knowledge	73
6.1	Procedural Solution Methods.	75
6.1.1	Design Problems Cast in a Mathematical Form.	76
6.1.2	Case of Application of Procedural Solution Method	77
6.2	Inference Based Systems	79
6.2.1	Separating Knowledge and Control	79
6.2.2	How Is Inference Based Programs Different from Procedural Programs?	82
6.2.3	Frames for Object Oriented Knowledge Base	83
6.2.4	Knowledge Objects	84
6.3	Exhaustive Search by G&T	86
6.3.1	Problems with Discrete Variables and Cyclic Flow Graphs	86
6.3.2	Generate and Test, G&T.	88
6.4	Constraint Processing.	91
6.4.1	The Method of Elimination	92
6.4.2	Constraint Processing in Practice.	93
	References	95
7	Representation and Processing of Implicit Knowledge	97
7.1	Case Based Reasoning, CBR, and Case Based Design, CBD	98
7.1.1	Establishing a Case Base	99
7.1.2	Case Retrieval by Search and Match	100

- 7.2 Interpolation Methods 102
 - 7.2.1 Curve Fitting and Response Surfaces. 103
 - 7.2.2 Neural Networks. 104
- 7.3 Optimisation. 106
 - 7.3.1 Hill Climbing Methods. 107
 - 7.3.2 Genetic Method 109

- 8 Planning a Design Automation System 111**
 - 8.1 Seven Steps for Systematic Planning of a Design Automation Project 112
 - 8.1.1 Get Acceptance and Involvement. 113
 - 8.1.2 Define and Delimit Problem. 113
 - 8.1.3 Evaluate Cost/Benefit. 113
 - 8.1.4 Acquire Design Knowledge 114
 - 8.1.5 Clarify and Map Design Process 115
 - 8.1.6 Classify Problem and Select Solution Strategy 115
 - 8.1.7 Select Software Tools and Plan for Implementation, Maintenance and Expansion. 116
 - 8.2 Criteria for Evaluation 117
 - 8.3 Knowledge Acquisition and Process Mapping. 118
 - 8.3.1 Compiling Design Knowledge by Reverse Engineering 118
 - 8.3.2 Mapping of Design Process 120
 - 8.4 Planning Architecture and Working Principles 122
 - 8.4.1 Review of Options 123
 - 8.4.2 Where Should the Knowledge Be Stored and Processed? 124
 - 8.4.3 Matching Design Process to DA Methods 126
 - 8.5 Documentation 128
 - 8.5.1 Why Documentation Is Important 128
 - 8.5.2 Formal Methods for Documentation 129
 - 8.6 Aspects on Security 130
 - 8.7 Knowledge Quality. 131
