

Contents

1	Key Features and Operating Conditions of Tribocoupling	1
1.1	Friction, Wear, and Lubrication. Concepts Development	1
1.2	Performance Analysis of Oil Field Equipment in Terms of Mechanical–Chemical Defectiveness.	8
1.2.1	Assessment of the Level of Corrosive Mechanical Fracture in Equipment	9
1.2.2	Mathematical Modeling of Mechanical–Chemical Defectiveness and Calculations on Durability.	12
1.3	Performance Analysis of Oil Field Equipment in Terms of Non-stationary Loading.	13
	Literatures	21
2	Scientific Foundations of Stochastic Tribomodeling	23
2.1	Probability Analysis of Generalized Variables Based on Stochastic Nature of Parameters.	24
2.2	Varying Generalized Variable When Planning Experiments.	47
2.3	Application of Group Method of Data Handling with Respect to Tribotechnical Problems	49
2.3.1	Development of Mathematical Model with Initial Variables	51
2.3.2	Development of Mathematical Model with Generalized Variables	54
	Literatures	57
3	Synergetic Model of Fracture and Mechanics of Fatigue Cracks During Friction	59
3.1	Synergetic Analysis of Plastic Deformation and Fracture Using Bifurcation Doubling Model.	60
3.2	Application of Generalized Golden Ratios to Control Self-similarity and Stability Properties of Fractal Structure Distribution in Fatigue Cracks of Solids	78

3.3	Bifurcation Doubling Model (Feigenbaum Scheme) for Fatigue Crack Growth	89
3.3.1	Universality of the Feigenbaum Theory to Describe the Behavior of Nonlinear Systems.	90
3.3.2	Bifurcation Doubling Process Forecasting	106
3.3.3	Analysis of the Noise Impact on the Feigenbaum Behavior.	117
3.4	Synergetics of the Restructuring of Crystal Structures with Condensed State Under the Influence of External Forces	121
	Literatures	136
4	Fractal Kinetics of Fracture	141
4.1	The Concept of Fractal—Fractal Dimension	141
4.2	Fractals in Condensed Matter Physics.	143
4.3	Fractal Properties of Hierarchical Structures of Potential Relief.	147
4.4	Kinetics of Fracture from Positions of the Theory of Fractals . . .	153
4.5	Relationship Analysis of the Fractal Dimension of Pre-fracture Dissipative Structures with Mechanical Properties and Critical States of Deformation of Metals and Alloys	164
	Literatures	175
5	Multifractal Analysis of Fatigue Failure	179
5.1	Key Concepts of Multifractal Analysis—Generalized Fractal Dimensions.	179
5.2	Multifractal Nature of Micro-Cracks Merger	186
5.3	Multifractal Singularity Spectrum of Time Series	199
5.3.1	Standard Multifractal Formalism and Singularity Spectrum	201
5.3.2	Wavelet Transform Modulus Maxima Method	205
5.3.3	Multifractal Fluctuation Analysis	210
5.3.4	Simple Multifractal Time Series Models	216
	Literatures	219
6	Fractal Analysis of Fatigue Failure of Kinematic Pair (Oil–Gas Xmas Tree Valve)	223
6.1	Design Features and Operating Conditions of Flow Control Devices	224
6.2	Contact Interaction Between the Bolt and Nut. N.E. Zhukovsky Problem	229
6.3	Load Distribution on Screw of Kinematic Pair.	231
6.4	Study of Wear of the Valve Kinematic Pair in the Elastic–Plastic Deformation Zone	238

6.5	Assessment of Tribological Characteristics of Kinematic Pair . . .	247
6.6	Mechanics of Frictional Conical Surfaces of Xmas Tree Valves.	259
6.7	Fractal Dimension and Analysis of Fatigue Non-spreading Cracks of the Kinematic Pair of Valve	264
6.8	Improving Durability of the Kinematic Pair of Valve	273
6.9	Test Stand of the Kinematic Pair of Valve	274
6.10	Choosing a Lubricant for the Direct Flow Valve of Xmas Tree	280
	Literatures	286
7	Fractal Fatigue Analysis of Valve Units of Sucker Rod Pumps. . . .	289
7.1	Design and Analysis of Operating Conditions of Valve Units.	289
7.2	Analytical Dependencies for Assessing the Tightness of Valve Units.	290
7.3	Wear and Its Determination in Valve Units.	296
7.4	Fluid Leakage and Its Determination in Valve Units.	301
7.5	Recommendation for Improving the Wear Resistance of Valve Units.	304
7.6	Fractal Dimension Analysis of Cumulative Crack Area of Valve Fracture.	306
7.6.1	Measurement and Fractal Structure Analysis of the Rough Surfaces	307
7.6.2	Durability Modeling of Submersible Pumps Depending on Fractal Dimension of Surface Breakage and Cumulative Crack Area of Valve Fracture.	310
7.7	Kinetics of Damage at Contact Fatigue of Parts of Submersible Pump	313
7.8	Contact Interaction Diagnosis of Solids at Friction Using Fractal Analysis	316
7.8.1	Emergence of Fractal Structures Through the Evolution of Complex Systems.	318
7.8.2	Dependence of Contour Pressure on Roughness at Elastic and Plastic Contacts	320
7.8.3	Calculation of Fractal Dimension on Supporting Surface Curve at Threshold Values of Injection	324
7.8.4	Calculation of Power Spectrum of Roughness Profile and Contact Regime Diagnosis of Metal Bodies.	326
	Literatures	330

8	Flicker Noise Spectroscopy (FNS) of Dynamics Signals and Its Application in Wear of Oil-Field Compressor Units (OFCU)	333
8.1	Analysis of Technical Manufacturing Characteristics of Operating Oil-Field Compressor Units	333
8.2	Flicker Noise Spectroscopy—A New Approach to Solving the Problem of Extracting Information from Complex Dynamic Signals	335
8.3	Essence of Flicker Noise Spectroscopy	340
8.4	Flicker Noise and Self-similar Criticality	342
8.5	Conceptual Foundations of Flicker Noise Spectroscopy	346
8.6	Assessment of Irregularities-Bursts and Catastrophic Changes in the State of Oil-Field Compressor Units	350
8.6.1	Formulation of the Problem and Solution Method	350
8.6.2	Parameterization of Singular Component of Signal Power Spectrum	351
8.6.3	Precursor Calculation of System Catastrophic States	359
8.7	Parameterization of Signal Regular Component	361
8.8	Joining Asymptotic Representations of the Structure Function $\widetilde{\Phi}_R^{(2)}(\tau)$	371
	Literatures	379

Synergetics and Fractals in Tribology

Janahmadov, A.K.; Javadov, M.

2016, XII, 381 p. 98 illus., Hardcover

ISBN: 978-3-319-28187-2
