

Contents

1	Introduction	1
	References	4
2	Two-Degree-of-Freedom PID Controllers Structures	7
2.1	Proportional Integral Derivative Control Algorithm	8
2.2	Two-Degree-of-Freedom (2DoF) PID Control Algorithms	9
2.3	PID Control Algorithms Conversion Relations	12
2.4	PID Controller with Two Input Filters	16
	References	18
3	Control System Evaluation Metrics	21
3.1	Closed-Loop Control System	22
3.2	Control System Performance Evaluation	22
3.3	Control Effort Use Evaluation	23
3.4	Control System Robustness Evaluation	23
3.5	Controller Fragility Evaluation	24
3.6	Evaluation Metrics Summary	27
	References	28
4	Model-Reference Robust Tuning Design Methodology	29
4.1	Introduction	30
4.2	Optimization Cost Functionals	31
4.3	Closed-Loop Reference Models	33
	References	34
5	Normalized Controlled Process Models and Controllers	35
5.1	Timescaling and Consistent Controller Design	35
5.2	Controlled Process Normalized Parameters Models	36
5.3	Normalized Controllers Parameters	38
	References	40

6	MoReRT Control of Overdamped Processes	41
6.1	Introduction	41
6.2	Proportional Integral Control	42
6.2.1	Control System Framework	42
6.2.2	PI Tuning for Overdamped Closed-Loop Response Target	43
6.2.3	PI Tuning for Under-Damped Closed-Loop Response Target	52
6.3	Proportional Integral Derivative Control	55
6.3.1	2DoF Ideal PID with Filter	55
6.3.2	2DoF Ideal Parallel PID with Two Input Filters	58
6.3.3	Evaluation of MoReRT Controllers	61
	References	64
7	MoReRT Control of Inverse Response Processes	65
7.1	Introduction	65
7.2	Proportional Integral Control	66
7.3	Proportional Integral Derivative Control	70
7.3.1	2DoF Ideal PID with Filter	70
7.3.2	2DoF Ideal PID with Two Input Filters	75
	References	77
8	MoReRT Control of Integrating Processes	79
8.1	Introduction	79
8.2	Integrating Second-Order Plus Dead-Time Models	80
8.2.1	2DoF Proportional Integral Control	80
8.2.2	2DoF PI Controller with Two Input Filters	83
8.3	Integrating Plus Dead-Time Models	84
8.3.1	Proportional Integral Control	84
8.3.2	2DoF PID Controllers with Two Input Filters	86
8.4	Analysis of MoReRT Controllers	87
8.4.1	PID_{2IF} Comparison for Integrating First-Order Process	87
8.4.2	Control of an Integrating Third-Order Process	88
	References	91
9	MoReRT Control of Unstable Processes	93
9.1	Introduction	93
9.2	2DoF Proportional Integral Control	93
9.3	2DoF PID Controller with Filter	95
9.4	2DoF PID Controllers with Two Input Filters	98
9.5	Analysis of MoReRT Controllers	100
9.5.1	PI_2 Controller	100
9.5.2	PID_{2IF} Controller	100
	References	103

10	MoReRT Design Methodology Extensions	105
10.1	MoReRT Design with Control Effort Specifications	106
10.2	Use of a Different Load Disturbance Path	112
10.3	Robust Tuning of Two-Degree-of-Freedom Dead-Time Compensating Controllers	119
	References	126
11	MoReRT Practical Application	129
11.1	Commercial Two-Degree-of-Freedom PID Controllers	130
11.1.1	ABB Control Technologies	130
11.1.2	Emerson Process Management	132
11.1.3	Mitsubishi Electric	133
11.1.4	National Instruments	135
11.1.5	OMRON	136
11.1.6	REX Controls	137
11.1.7	Siemens AG	137
11.1.8	Toshiba Corporation	138
11.1.9	Main Characteristics and Limitations	140
11.2	MoReRT Controllers Design Implementation	140
11.2.1	MoReRT Tuning Rules	141
11.2.2	MoReRT Controllers Design Procedure Outline	145
11.3	Case Study	149
11.3.1	Control of a Continuous Stirred-Tank Heater	149
11.4	Chapter Remarks	165
	References	166
	Appendix A: MoReRT Controllers Design Demo Software	169
	Index	191

Model-Reference Robust Tuning of PID Controllers

Alfaro, V.M.; Vilanova, R.

2016, XIX, 192 p. 80 illus. With online files/update.,

Hardcover

ISBN: 978-3-319-28211-4
