2	Introduction to Jython	27
2.1	Code Structure and Jython Objects	27
2.1.1	Numbers as Objects	30
2.1.2	Formatted Output	32
2.1.3	Mathematical Functions	32
2.2	Complex Numbers	33
2.3	Strings as Objects	35
2.4	Import Statements	36
2.4.1	Executing Native Applications	37
2.5	Comparison Tests and Loops	38
2.5.1	The “if-else” Statement	38
2.5.2	Loops. The “for” Statement	39
2.5.3	The “continue” and “break” Statements	39
2.5.4	Loops. The “while” Statement	40
2.6	Collections	41
2.6.1	Lists	41
2.6.2	Tuples	46
2.6.3	Dictionaries	46
2.6.4	Functional Programming	48
2.7	Java Collections in Jython	50
2.7.1	List. An Ordered Collection	50
2.7.2	Set. A Collection Without Duplicate Elements	53
2.7.3	SortedSet. Sorted Unique Elements	54
2.7.4	Map. Mapping Keys to Values	55
2.7.5	Java Map with Sorted Elements	55
2.7.6	Real-Life Example: Sorting and Removing Duplicates	56
2.8	Random Numbers	57
2.9	Time Module	58
2.9.1	Benchmarking	59
2.10	Python Functions and Modules	60
2.11	Python Classes	63
2.11.1	Initializing a Class	65
2.11.2	Classes Inherited from Other Classes	65
2.11.3	Java Classes in Jython	66
2.11.4	Not Covered Topics	66
2.12	Parallel Computing and Threads	67
2.13	Arrays in Jython	68
2.13.1	Array Conversion and Transformations	69
2.13.2	Performance Issues	69
2.13.3	Used Memory	70
2.14	Exceptions in Python	71

2.15	Input and Output	72
2.15.1	User Interaction	72
2.15.2	Reading and Writing Files	72
2.15.3	Input and Output for Arrays	74
2.15.4	Working with CSV Python Module.	74
2.15.5	Saving Objects in a Serialized File	76
2.15.6	Storing Multiple Objects	77
2.15.7	Using Java for I/O	78
2.15.8	Reading Data from the Network	79
2.16	Real-Life Example. Collecting Data Files	80
2.17	Using Java for GUI Programming.	82
2.18	Concluding Remarks.	84
	References	84
3	Mathematical Functions	85
3.1	Python Functions	85
3.2	Functions in DMelt.	87
