1	Introduction	1
1.1	A Long-Standing Challenge: Gaining Insight into Glass	
	Fundamentals	1
1.1.1	Glass Structure	2
1.1.2	Glassy Dynamics	4
1.2	A New Method for Studying Dynamics: aXPCS	5
1.2.1	Methods for Studying Diffusion	5
1.2.2	The Development of aXPCS	7
	References	10
2	Theory	13
2.1	Achieving Coherent Scattering	13
2.1.1	Scattering Intensity and Speckle Patterns	13
2.1.2	Optimal Scattering Thickness	16
2.1.3	Coherence Properties	18
2.2	Deducing Real-Space Time-Correlations from Intensity	
	Pattern Series	22
2.2.1	Van Hove Pair Correlation Function	23
2.2.2	Autocorrelation Functions	23
2.2.3	Link Between Autocorrelation Functions of Measured	
	Intensities and Those of Real-Space Information	25
2.3	Unravelling Atomic Dynamics	26
2.3.1	Continuous Diffusion	27
2.3.2	Jump Diffusion: Chudley–Elliott Model	28
2.3.3	Extensions of the Chudley–Elliott Model	31
2.4	Applying aXPCS to Diffusion in Glasses	32
2.4.1	Influence of Different Scattering Species	32
2.4.2	Kohlrausch Exponent	33
2.4.3	Short-Range Order Correction	34
	References	35

3	Experimental	37
3.1	Preparing Glass Samples for Coherent Experiments	37
3.1.1	Glass Melting	37
3.1.2	Creating Thin But Stable Samples: Dimpling Grinder	39
3.2	Creating a Stable Sample Environment for Atomic-Resolution Measurements	42
3.2.1	Vacuum Sample Cell	42
3.2.2	Helium Cryostat	46
3.3	Obtaining Scattering Data for Atomic-Diffusion Studies	47
3.3.1	Generating Coherent X-Rays	47
3.3.2	Conducting Synchrotron Experiments	50
3.3.3	Gaining Complementary X-Ray Scattering Information	53
	References	54
4	Data Analysis	55
4.1	Converting Scattered X-Rays to Intensity Data	55
4.1.1	Detecting Single Photons	56
4.1.2	Disposing of the Dark Current	57
4.2	Obtaining Correlation Times from Intensity Data	58
4.2.1	Histogram	58
4.2.2	Droplet Algorithm	59
4.2.3	Autocorrelation	61
4.2.4	Two-Time Correlation	62
4.3	Extracting Dynamics from Correlation Times	63
4.4	Evaluating in Real-Time During Experiments	64
	References	64
5	Proof of Concept: Direct Observation of Atomic Diffusion in Glasses	67
5.1	Previous Studies of Lead Silicate Glasses	67
5.1.1	Structure	67
5.1.2	Dynamics	70
5.2	New Insight into Lead Silicate Glasses	71
5.2.1	Scattering Intensities	71
5.2.2	Glass Temperatures	72
5.2.3	Atomic Dynamics	73
	References	79
6	Practical Application: Tailoring Fast Ionic Diffusion	81
6.1	Previous Studies on Amorphous Fast Ionic Conductors	82
6.1.1	Structure of Alkali Borate Glasses	82
6.1.2	Atomic Dynamics	83
6.2	Tailoring Atomic Diffusion in Glasses	85
6.2.1	Fluorescence: Caesium Borate Glasses	85
6.2.2	Influence of Thermal History: Rubidium Borate Glasses	87

6.2.3	Path to Light Alkali: Potassium Borate Glasses	92
6.2.4	First Measurement of Light-Alkali Diffusion: Sodium Borate Glasses	94
	References	96
7	Conclusion.	99
