

Contents

1	Impulsive Dynamics and Measure Differential Equations	1
1.1	Impulsive Forces	1
1.2	Measure Differential Equations (MDEs)	7
1.2.1	A First Class of MDEs	8
1.2.2	A Second Class of MDEs: ODEs Driven by Measure Inputs	11
1.2.3	Further Reading	15
1.2.4	A Third Class of MDEs: ODEs with State Jump Mappings	16
1.2.5	Further Reading	18
1.3	Systems Subject to Unilateral Constraints	19
1.3.1	General Considerations	19
1.3.2	Flows with Collisions (Vibro-Impact Systems)	26
1.3.3	Unilaterally Constrained Systems: A Geometric Approach.	34
1.3.4	Bilaterally Constrained Mechanical Systems and Impulsive Dynamics	38
1.4	Changes of Coordinates in MDEs.	39
1.4.1	From Measure to Carathéodory Systems	39
1.4.2	Decoupling of the Impulsive Effects (Commutativity Conditions)	42
1.4.3	From Unilaterally Constrained Mechanical Systems to Filippov's Differential Inclusions: the Zhuravlev–Ivanov Method	44
2	Viscoelastic Contact/Impact Rheological Models.	51
2.1	Simple Examples	52
2.1.1	From Elastic to Hard Impact	52
2.1.2	From Damped to Plastic Impact	55
2.1.3	The General Case	56

2.2	Viscoelastic Contact Models and Restitution Coefficients.	66
2.2.1	Linear Spring-Dashpot	66
2.2.2	Nonlinear Elasticity and Viscous Friction: Simon-Hunt-Crossley and Kuwabara-Kono Dissipations	68
2.2.3	Conclusions	77
2.3	Viscoelastic Models with Dry Friction Elements: Viscoelasto-Plastic Models.	78
2.3.1	Conclusions and Further Reading	82
2.4	Penalizing Functions in Mathematical Analysis	83
2.4.1	The Elastic Rebound Case	83
2.4.2	The Case with Dissipation (Linear Viscous Friction).	84
2.4.3	Uniqueness of Solutions	89
2.4.4	Further Existence and Uniqueness Results	92
2.5	Some Comments on Compliant Models.	93
3	Variational Principles	95
3.1	Virtual Displacements, Velocities, and Accelerations Principles	95
3.1.1	The “Classical” Presentation	95
3.1.2	Using Variational and Quasi-Variational Inequalities Formalisms	98
3.2	A Coordinate Invariance Principle	102
3.2.1	Perfect Constraints	103
3.3	Gauss’ Principle	104
3.3.1	Further Reading	105
3.4	Lagrange Dynamics	107
3.4.1	External Impulsive Forces	107
3.4.2	Example: Flexible Joint Manipulators	108
3.5	Hamilton’s Principle and Unilateral Constraints	110
3.5.1	Hamilton’s Principle Without Impacts	110
3.5.2	Hamilton’s Principle With Impacts	111
3.5.3	Modified Set of Curves	115
3.5.4	Modified Lagrangian Function	119
3.5.5	Additional Comments and Studies	122
4	Two Rigid Bodies Colliding.	127
4.1	Dynamical Equations of Two Rigid Bodies Colliding	127
4.1.1	General Considerations	127
4.1.2	The Local Kinematics	129
4.1.3	The Gap Function.	132
4.1.4	The Two-Body System Dynamics.	135
4.1.5	Dynamical Equations and Energy Loss at Collision Times	137
4.1.6	The Percussion Center.	142

4.2	Restitution Laws	143
4.2.1	Elastoplastic Impacts and Restitution Coefficients	147
4.2.2	Adhesive Effects.	158
4.2.3	Beyond Hertz: Conformal Contact Models.	162
4.2.4	Conditions for Quasistatic Impacts	164
4.2.5	Incorporating Friction Effects	168
4.2.6	Conclusions	171
4.2.7	Material Parameters: Some Values	172
4.3	Impacts with Friction	173
4.3.1	Simple Examples	173
4.3.2	Kinematic CoR: Brach's Method	188
4.3.3	Additional Comments and Studies	193
4.3.4	Kinematic CoR: Frémond's approach	198
4.3.5	First Order Impact Dynamics: Darboux-Keller's Shock Equations.	200
4.3.6	The Energetic Coefficient of Restitution.	217
4.3.7	Examples.	222
4.3.8	Other Energetical Coefficients	225
4.3.9	Additional Comments and Studies	225
4.3.10	Multiple Microcollisions Phenomenon: Toward a Global Coefficient	227
4.3.11	Conclusion	231
4.3.12	The Thomson-and-Tait Formula	232
4.3.13	Graphical Analysis of the Shock Dynamics	233
4.4	Impacts in Flexible Structures	236
4.4.1	Multimodal Modeling Approach.	236
4.4.2	Infinite Dimensional System Approach	238
4.4.3	Further Reading	239
4.5	General Comments	239
5	Nonsmooth Lagrangian Systems	241
5.1	Lagrange Dynamics with Multiple Constraints	241
5.1.1	Frictionless Bilateral Constraints: The Contact Problem	244
5.1.2	Frictionless Unilateral Constraints: The Contact Problem	247
5.1.3	Mixed Bilateral/Unilateral Frictionless Constraints: The Contact Problem	251
5.1.4	Singular Mass Matrix: From Singular Lagrange's to Singular Hamilton's Dynamics	254
5.2	Moreau's Sweeping Process.	256
5.2.1	First-Order Sweeping Process.	256
5.2.2	Second-Order Sweeping Process: Frictionless Mechanical Systems	258

5.2.3	Well-Posedness Results	277
5.2.4	Continuous Dependence on Initial Data	284
5.3	Coulomb's Friction	285
5.3.1	Coulomb's Friction Model	286
5.3.2	Coulomb–Moreau's Disk	288
5.3.3	De Saxcé's Associated Formulation	290
5.3.4	Coulomb's Friction at the Acceleration Level	292
5.3.5	Further Comments on Friction Models	293
5.3.6	Sweeping Process with Friction	294
5.3.7	Additional Comments and Studies	297
5.4	Complementarity Formulations	297
5.4.1	Two Bodies: Signorini's Conditions	298
5.4.2	Linear Complementarity Problem (LCP)	299
5.4.3	Relationships with Quadratic Problems	302
5.4.4	Linear Complementarity Systems (LCS)	304
5.4.5	Controllability of LCS	324
5.4.6	Observability and Observers for LCS	327
5.4.7	Complementarity Systems and Hybrid Dynamical Systems	327
5.5	The Contact Problem with Coulomb's Friction	329
5.5.1	Introduction	329
5.5.2	Dissipativity of the Constrained Lagrange Dynamics	330
5.5.3	Extension of the Results of Sects. 5.1.1, 5.1.2, 5.1.3?	331
5.5.4	The Contact Problem for a Planar Particle	332
5.5.5	A Second Simple Mechanism with Friction	335
5.5.6	Non-Uniqueness of the Contact Force	339
5.5.7	Comments	341
5.6	Painlevé's Paradoxes: Sliding Rod Example	342
5.6.1	The Dynamics of Painlevé's Example	342
5.6.2	The Contact LCP	344
5.6.3	Analysis of the Dynamical Singularities	347
5.6.4	Further Reading	352
5.6.5	Conclusions	355
5.7	Numerical Simulation	356
5.7.1	Event-Driven Algorithms	356
5.7.2	Compliant Contact/Impact Models	357
5.7.3	Time-Stepping (Event-Capturing) Numerical Algorithms	358
6	Generalized Impact Laws and Multiple Impacts	371
6.1	Particular Features of Multiple Impacts	371
6.1.1	Some Specific Features of Multiple Impacts	372
6.1.2	Han-Gilmore's and Binary Collisions Models	379
6.1.3	Penalization at Contacts (Compliance)	383
6.1.4	Multiplicity of Multiple Impacts	385

6.2	Kinematic Multiple-Impact Law (Generalized Newton)	386
6.2.1	The Quasi-Lagrange Equations	386
6.2.2	The Kinetic Energy	390
6.2.3	The Contact Forces Power	392
6.2.4	Restitution Law for Frictionless Systems	394
6.2.5	Restitution Law with Tangential Effects	398
6.2.6	Tangential Restitution	402
6.2.7	Comments	402
6.3	Energetic-CoR Multiple-Impact Law	403
6.3.1	Presentation of the LZB Impact Dynamics	404
6.3.2	Applications and Validations	407
6.3.3	Comparison of Different Multiple Impact Mappings	412
6.4	Further Reading	413
6.4.1	Kinetic Restitution (Poisson)	413
6.4.2	Kinematic Restitution (Newton and Moreau)	414
6.4.3	Other Approaches	414
7	Stability of Nonsmooth Dynamical Systems	417
7.1	Stability of Measure Differential Equations	417
7.1.1	Stability of Impulsive ODEs	417
7.1.2	Stability of Measure Driven ODEs (MDEs)	419
7.1.3	Additional Comments and Studies	420
7.2	Stability of the Discrete Dynamic Equations	421
7.2.1	The Bouncing-Ball with Fixed Obstacle	422
7.2.2	Lyapunov Stability of Discrete-Time Systems	425
7.3	Impact Oscillators	426
7.3.1	Existence of Periodic Trajectories	426
7.3.2	Further Reading	430
7.3.3	Comments on the Poincaré Impact Map Stability Analysis	432
7.3.4	Other Studies on Stability	436
7.3.5	Bouncing-Ball with Moving Base	437
7.3.6	Additional Comments and Studies	438
7.4	Grazing or C-Bifurcations	440
7.4.1	The Stroboscopic Poincaré Map Discontinuities	442
7.4.2	The Stroboscopic Poincaré Map Around Grazing-Motions	445
7.4.3	Further Comments and Studies	447
7.5	Complementarity Lagrangian Systems: Stability of Fixed Points	448
7.5.1	The Dynamical System	449
7.5.2	The Stability Analysis	451
7.5.3	Dissipativity Properties	454
7.5.4	Further Reading and Comments	457

7.5.5	Global Finite-Time Stability <i>via</i> the Zhuravlev-Ivanov Transformation.	460
7.6	Stabilization of Impacting Systems: From Compliant to Rigid Models	462
7.6.1	System's Dynamics.	462
7.6.2	Lyapunov Stability Analysis	464
7.6.3	Analysis of Quadratic Stability Conditions for Large Stiffness Values	465
7.6.4	A Stiffness-Independent Convergence Analysis.	469
7.7	Stability of Linear Complementarity Systems	473
7.8	Further Reading	475
8	Trajectory Tracking Feedback Control	477
8.1	Trajectory Tracking: Rigid-Joint Rigid-Body Systems	477
8.1.1	Basic Concepts.	479
8.1.2	Controller Design	485
8.1.3	Tracking Control Framework	487
8.1.4	Design of the Desired Contact Force During Constraint Phases	490
8.1.5	Strategy for Takeoff at the End of Constraint Phases Ω_k'	492
8.1.6	Closed-Loop Stability Analysis	494
8.1.7	Illustrative Examples.	495
8.1.8	Proof of Lemma 8.1	499
8.1.9	Proof of Theorem 8.1	503
8.2	Short Bibliography	506
8.3	Trajectory Tracking: Flexible-Joint Rigid-Link Systems.	508
8.3.1	Basic Concepts.	509
8.3.2	Tracking Control Framework	512
8.3.3	Desired Contact Force During Constraint Phases	515
8.3.4	Strategy for Takeoff at the End of Constraint Phases $\Omega_{2k+1}^{B_k}$	517
8.3.5	Closed-Loop Stability Analysis	518
8.3.6	Illustrative Example	519
8.3.7	Proof of Proposition 8.7	523
8.3.8	Proof of Lemma 8.2	524
8.3.9	Proof of Lemma 8.3	524
8.3.10	Proof of Theorem 8.2	526
8.4	A Unified Point of View	529
8.5	Further Results.	529
8.5.1	Experimental Control of the Transition Phase.	529
8.5.2	Juggling Robots Analysis and Control.	531
8.5.3	Mechanisms with Joint Clearance	532
8.5.4	Observability and State Observers.	533

Erratum to: Nonsmooth Mechanics	E1
Appendix A: Distributions, Measures, Functions of Bounded Variations	535
Appendix B: Elements of Convex Analysis	547
