

Contents

Part I Control

Is Active Impedance the Key to a Breakthrough for Legged Robots?	3
Claudio Semini, Victor Barasuol, Thiago Boaventura, Marco Frigerio and Jonas Buchli	
Optimal Control of Nonlinear Systems with Temporal Logic Specifications	21
Eric M. Wolff and Richard M. Murray	
Extended LQR: Locally-Optimal Feedback Control for Systems with Non-Linear Dynamics and Non-Quadratic Cost	39
Jur van den Berg	
Adaptive Communication in Multi-robot Systems Using Directionality of Signal Strength	57
Stephanie Gil, Swarun Kumar, Dina Katabi and Daniela Rus	
Multi-vehicle Dynamic Pursuit Using Underwater Acoustics	79
Brooks Reed, Josh Leighton, Milica Stojanovic and Franz Hover	
Aggressive Maneuver Regulation of a Quadrotor UAV	95
Sara Spedicato, Giuseppe Notarstefano, Heinrich H. Bühlhoff and Antonio Franchi	
Towards Modeling Real-Time Trust in Asymmetric Human-Robot Collaborations	113
Anqi Xu and Gregory Dudek	
Optimal Control for Viscoelastic Robots and Its Generalization in Real-Time	131
Sami Haddadin, Roman Weitschat, Felix Huber, Mehmet Can Özparpucu, Nico Mansfeld and Alin Albu-Schäffer	

K-Redundant Trees for Safe and Efficient Multi-robot Recovery in Complex Environments	149
Golnaz Habibi, Lauren Schmidt, Mathew Jellins and James McLurkin	
Adaptive Inter-Robot Trust for Robust Multi-Robot Sensor Coverage	167
Alyssa Pierson and Mac Schwager	
 Part II Design	
AIST Humanoid Robotics Challenge	187
Kazuhito Yokoi	
A Scripted Printable Quadrotor: Rapid Design and Fabrication of a Folded MAV	203
Ankur M. Mehta, Daniela Rus, Kartik Mohta, Yash Mulgaonkar, Matthew Piccoli and Vijay Kumar	
The Solving by Building Approach Based on Thermoplastic Adhesives	221
Fumiya Iida, Liyu Wang, Luzius Brodbeck, Derek Leach, Surya Nurzaman and Utku Culha	
Slip Detection in a Novel Tactile Force Sensor	237
Raul Fernandez, Ismael Payo, Andres S. Vazquez and Jonathan Becedas	
Concentric Tube Robots: The State of the Art and Future Directions	253
Hunter B. Gilbert, D. Caleb Rucker and Robert J. Webster III	
A Framework for Real-Time Multi-Contact Multi-Body Dynamic Simulation	271
François Conti and Oussama Khatib	
 Part III Intelligence and Learning	
Constructive Developmental Science: A Trans-Disciplinary Approach Toward the Fundamentals of Human Cognitive Development and Its Disorders, Centered Around Fetus Simulation	291
Yasuo Kuniyoshi	
Personalizing Intelligent Systems and Robots with Human Motion Data	305
Gentiane Venture, Ritta Baddoura, Yuta Kawashima, Noritaka Kawashima and Takumi Yabuki	

Beyond Geometric Path Planning: Learning Context-Driven Trajectory Preferences via Sub-optimal Feedback.	319
Ashesh Jain, Shikhar Sharma and Ashutosh Saxena	
Learning from Demonstrations Through the Use of Non-rigid Registration	339
John Schulman, Jonathan Ho, Cameron Lee and Pieter Abbeel	
Part IV Manipulation	
Robust Contact Generation for Robot Simulation with Unstructured Meshes.	357
Kris Hauser	
Manifold Representations for State Estimation in Contact Manipulation	375
Michael C. Koval, Nancy S. Pollard and Siddhartha S. Srinivasa	
Exploitation of Environmental Constraints in Human and Robotic Grasping	393
Raphael Deimel, Clemens Eppner, José Álvarez-Ruiz, Marianne Maertens and Oliver Brock	
Restraining Objects with Curved Effectors and Its Application to Whole-Arm Grasping	411
Jungwon Seo, Mark Yim and Vijay Kumar	
Part V Perception	
Data Association for Semantic World Modeling from Partial Views	431
Lawson L.S. Wong, Leslie Pack Kaelbling and Tomás Lozano-Pérez	
Driven Learning for Driving: How Introspection Improves Semantic Mapping	449
Rudolph Triebel, Hugo Grimmer, Rohan Paul and Ingmar Posner	
RatSLAM: Using Models of Rodent Hippocampus for Robot Navigation and Beyond	467
Michael Milford, Adam Jacobson, Zetao Chen and Gordon Wyeth	
Into Darkness: Visual Navigation Based on a Lidar-Intensity-Image Pipeline	487
Timothy D. Barfoot, Colin McManus, Sean Anderson, Hang Dong, Erik Beerepoot, Chi Hay Tong, Paul Furgale, Jonathan D. Gammell and John Enright	

Automatic Differentiation on Differentiable Manifolds as a Tool for Robotics	505
Hannes Sommer, Cédric Pradalier and Paul Furgale	
Minimal Solutions for Pose Estimation of a Multi-Camera System . . .	521
Gim Hee Lee, Bo Li, Marc Pollefeys and Friedrich Fraundorfer	
Recursive Inference for Prediction of Objects in Urban Environments	539
Cesar Cadena and Jana Košecká	
A New Approach to Model-Free Tracking with 2D Lidar	557
Dominic Zeng Wang, Ingmar Posner and Paul Newman	
Part VI Planning	
Task-Oriented Grasp Planning Based on Disturbance Distribution . . .	577
Yun Lin and Yu Sun	
Towards Planning in Generalized Belief Space	593
Vadim Indelman, Luca Carlone and Frank Dellaert	
An Online POMDP Solver for Uncertainty Planning in Dynamic Environment.	611
Hanna Kurniawati and Vinay Yadav	
An Enzyme-Inspired Approach to Stochastic Allocation of Robotic Swarms Around Boundaries	631
Theodore P. Pavlic, Sean Wilson, Ganesh P. Kumar and Spring Berman	
Polynomial Trajectory Planning for Aggressive Quadrotor Flight in Dense Indoor Environments.	649
Charles Richter, Adam Bry and Nicholas Roy	
Fast Marching Trees: A Fast Marching Sampling-Based Method for Optimal Motion Planning in Many Dimensions	667
Lucas Janson and Marco Pavone	
Safe Motion Planning for Imprecise Robotic Manipulators by Minimizing Probability of Collision.	685
Wen Sun, Luis G. Torres, Jur van den Berg and Ron Alterovitz	

Robotics Research

The 16th International Symposium ISRR

Inaba, M.; Corke, P. (Eds.)

2016, XIV, 701 p. 298 illus., 33 illus. in color., Hardcover
