

Contents

1	Introduction	1
1.1	Link Prediction Problem	1
1.2	Literature Review	2
1.3	Background	5
1.3.1	Link Prediction Similarity Measures	5
1.3.2	Outline of Link Prediction Algorithm	8
1.3.3	Power Law Degree Distribution	8
1.3.4	Kullback–Leibler (KL) Divergence	9
1.3.5	Clustering Coefficient	9
1.4	Datasets Used in Experiments	10
	References	11
2	Link Prediction Using Thresholding Nodes Based on Their Degree	15
2.1	Introduction	15
2.2	Markov Inequality for Determining Threshold	16
2.3	Markov Inequality-Based Degree Thresholding Similarity Measure (MIDT)	19
2.4	Experimental Setup	20
2.5	Results	21
2.6	Clique-Based Approach to Link Prediction	22
2.7	Summary	24
	References	25
3	Locally Adaptive Link Prediction	27
3.1	Introduction	27
3.2	Generalization of Link Prediction Similarity Measures	29
3.3	Locally Adaptive (LA) Similarity Measure	30
3.3.1	Properties of the LA Similarity Measure	31
3.4	Locally Adaptive Algorithm	34

3.5	Power Law Coefficient Estimation	35
3.5.1	Maximum Likelihood Estimate of α	35
3.5.2	Bayesian Estimate of α	37
3.6	Experimental Setup	42
3.7	Results	42
3.8	Summary	43
	References	44
4	Two-Phase Framework for Link Prediction.	45
4.1	Introduction	45
4.2	Motivation	46
4.2.1	Theoretical Existence of G_{r^*}	46
4.3	Two-Phase Framework	49
4.4	Experimental Setup	49
4.5	Results	51
4.5.1	Variation of Performance with lp-Factor	52
4.6	Summary	54
	References	55
5	Applications of Link Prediction	57
5.1	Recommender Systems	57
5.2	Spam Mail Detection	58
5.3	Privacy Control in Social Networks	58
5.4	Identifying Missing References in a Publication	58
5.5	Expert Detection	59
5.6	Influence Detection	59
5.7	Routing in Networks	59
5.8	Disease Prediction	60
	References	60
6	Conclusion.	63
	Glossary	65
	Index	67

Link Prediction in Social Networks

Role of Power Law Distribution

Srinivas, V.; Mitra, P.

2016, IX, 67 p. 5 illus. in color., Softcover

ISBN: 978-3-319-28921-2
