

Contents

1	Introduction	1
1.1	Structural Health Monitoring and Wire-Based Monitoring Systems	1
1.2	Structural Health Monitoring Using Wireless Sensor Networks	3
	References	6
2	Requirements, Challenges, and Summary of Hardware and Software Design for a WSN-Based SHM System	7
2.1	Requirements and Challenges	7
2.2	Hardware Design	8
2.3	Software Design	10
	References	11
3	Enabling Network-Wide and Event-Triggered Wakeup	13
3.1	Introduction	13
3.2	Related Works	14
3.3	Preliminaries	16
3.3.1	Two Wakeup Units and the Chain-Reaction Wakeup	16
3.3.2	Event, False Positive, and False Negative	17
3.3.3	Wakeup Graph and Wakeup Delay	19
3.4	Sentry Node Placement Problem (SNPP)	22
3.5	Solution	22
3.6	Simulation	24
3.6.1	Spanning Tree-Based Simulation	25
3.6.2	Simulation on a Bridge Model	26
3.7	Experiment	32
	References	34
4	Design of Distributed SHM Algorithms Within WSNs—A Cluster-Based Approach	37
4.1	Introduction	37
4.2	Preliminary: Modal Parameters and the ERA	39

4.3	Cluster-Based Modal Analysis and Its Energy Consumption	42
4.4	Determination of Global Mode Shapes Through Mode Shape Assembling.	45
4.5	Optimal Clustering.	47
4.5.1	Proposed Methods for Energy Efficient Clustering	48
4.6	Performance Evaluation	51
4.6.1	Simulation	51
4.6.2	Experiment.	52
	References	54
5	Design of Distributed SHM Algorithms Within WSNs-A Networked-Computing Approach	57
5.1	Design Objectives and the Organization of This Chapter.	57
5.2	Modification 1: Calculating the Markov Parameters in a Distributed Manner	58
5.3	Modification 2: Incremental SVD of the Hankel Matrix	59
5.4	Modification 3: Incremental SVD Updating in a WSN	62
5.4.1	Updating the SVD Along a Hamiltonian Path in the Network	63
5.4.2	Updating the SVD Along a Route in the Minimum-Connected Dominating Set (MCDS)	64
5.4.3	Modification 5: Updating the SVD Along the Shortest Path Tree	67
5.5	Summary of Communication and Computation Cost of the Proposed Methods	71
5.6	Performance Evaluation	72
5.6.1	Conclusion	77
	References	77
6	Realizing Fault-Tolerant SHM in WSNs	79
6.1	Introduction	79
6.2	Related Works.	81
6.3	FTED: The Fault-Tolerant Event Detection Scheme for WSN-Based SHM	82
6.3.1	Natural Frequency and Mode Shape	83
6.3.2	Cluster-Based Natural Frequency Identification	84
6.3.3	I-FUND	85
6.3.4	Identification of Mode Shape	91
6.4	Simulation	92
6.4.1	The Performance of I-FUND with ROD Through Simulation	92
6.5	Experiment on a Lab Structure	95
6.6	Conclusion	97
	References	97
7	Conclusions	99

Wireless Sensor Networks for Structural Health
Monitoring

Cao, J.; Liu, X.
