

Contents

1	Illustration of Key Concepts in Dimension $d = 1$	1
1.1	Periodic Hamiltonian and Its Topological Invariant	1
1.2	Edge States and Bulk-Boundary Correspondence	4
1.3	Why Use K -Theory?	5
1.4	Why Use Non-commutative Geometry?	10
1.5	Disordered Hamiltonian	11
1.6	Why Use Operator Algebras?	13
1.7	Why Use Non-commutative Analysis Tools?	15
1.8	Why Prove an Index Theorem?	17
1.9	Can the Invariants be Measured?	18
2	Topological Solid State Systems: Conjectures, Experiments and Models	19
2.1	The Classification Table	19
2.2	The Unitary Class	22
2.2.1	General Characterization.	22
2.2.2	Experimental Achievements	28
2.2.3	Conventions on Clifford Representations	29
2.2.4	Bulk-Boundary Correspondence in a Periodic Unitary Model	31
2.3	The Chiral Unitary Class	37
2.3.1	General Characterization.	38
2.3.2	Experimental Achievements	41
2.3.3	Bulk-Boundary Correspondence in a Periodic Chiral Model	43
2.4	Main Hypotheses on the Hamiltonians	46
2.4.1	The Probability Space of Disorder Configurations	46
2.4.2	The Bulk Hamiltonians	47
2.4.3	The Half-space and Boundary Hamiltonians	51

3	Observables Algebras for Solid State Systems	55
3.1	The Algebra of Bulk Observables	55
3.1.1	The Disordered Non-commutative Torus	55
3.1.2	Covariant Representations in the Landau Gauge	59
3.1.3	Covariant Representations in the Symmetric Gauge	61
3.1.4	The Algebra Elements Representing the Hamiltonians	62
3.2	The Algebras of Half-Space and Boundary Observables	63
3.2.1	Definition of the Algebras and Basic Properties.	63
3.2.2	The Exact Sequence Connecting Bulk and Boundary	65
3.2.3	The Toeplitz Extension of Pimsner and Voiculescu	65
3.2.4	Half-Space Representations.	67
3.2.5	Algebra Elements Representing Half-Space Hamiltonians	69
3.3	The Non-commutative Analysis Tools	69
3.3.1	The Fourier Calculus	69
3.3.2	Non-commutative Derivations and Integrals	71
3.3.3	The Smooth Sub-algebras and the Sobolev Spaces.	74
3.3.4	Derivatives with Respect to the Magnetic Field.	81
3.4	The Exact Sequence of Periodically Driven Systems	82
4	K-Theory for Topological Solid State Systems	85
4.1	Review of Key Elements of K -Theory	85
4.1.1	Definition and Characterization of K_0 Group.	86
4.1.2	Definition and Characterization of K_1 Group.	89
4.1.3	The Six-Term Exact Sequence	90
4.1.4	Suspension and Bott Periodicity	93
4.1.5	The Inverse of the Suspension Map.	95
4.2	The K -Groups of the Algebras of Physical Observables	97
4.2.1	The Pimsner-Voiculescu Sequence and Its Implications	97
4.2.2	The Inverse of the Index Map.	100
4.2.3	The Generators of the K -Groups	101
4.3	The Connecting Maps for Solid State Systems	105
4.3.1	The Exponential Map for the Bulk-Boundary Correspondence.	105
4.3.2	The Index Map for the Bulk-Boundary Correspondence.	106
4.3.3	The Bott Map of the Fermi Projection	109
4.3.4	The K -Theory of Periodically Driven Systems	110
5	The Topological Invariants and Their Interrelations	113
5.1	Notions of Cyclic Cohomology	113
5.2	Bulk Topological Invariants Defined	116
5.3	Boundary Topological Invariants Defined	118
5.4	Suspensions and the Volovik-Essin-Gurarie Invariants	122
5.5	Duality of Pairings and Bulk-Boundary Correspondence.	128

5.6	Generalized Streda Formulas	134
5.7	The Range of the Pairings and Higher Gap Labelling.	140
6	Index Theorems for Solid State Systems	145
6.1	Pairing K -Theory with Fredholm Modules	145
6.2	Fredholm Modules for Solid State Systems.	147
6.3	Equality Between Connes-Chern and Chern Cocycles.	155
6.4	Key Geometric Identities	161
6.5	Stability of Strong Bulk Invariants Under Strong Disorder	165
6.6	Delocalization of the Boundary States	169
7	Invariants as Measurable Quantities	173
7.1	Transport Coefficients of Homogeneous Solid State Systems.	173
7.2	Topological Insulators from Class A in $d = 2, 3$ and 4.	176
7.3	Topological Insulators from Class AIII in $d = 1, 2$ and 3	179
7.4	Surface IQHE for Exact and Approximately Chiral Systems	183
7.5	Virtual Topological Insulators	185
7.6	Quantized Electric Polarization	187
7.7	Boundary Phenomena for Periodically Driven Systems.	190
7.8	The Magneto-Electric Response in $d = 3$	191
	References	193
	Index	203

Bulk and Boundary Invariants for Complex Topological
Insulators

From K-Theory to Physics

Prodan, E.; Schulz-Baldes, H.

2016, XXII, 204 p. 1 illus., Hardcover

ISBN: 978-3-319-29350-9
