

Contents

1	Introduction	1
1.1	Human Activity as a Geomorphic Factor	3
1.1.1	Impact of Mining on the Landscape	5
1.1.2	Anthropogenic Denudation as a Research Problem	11
1.2	Research Methods and Data Sources	13
1.3	Environment of Study Area	17
	References	22
2	A Brief History of Mining in the Upper Silesian Coal Basin	31
2.1	Iron Ore Mining	31
2.2	Zinc and Lead Ore Mining	32
2.3	Hard Coal Mining	34
2.4	Rocks Resources Mining	43
	References	48
3	Anthropogenic Landforms in the Upper Silesian Coal Basin	51
3.1	Excavations	53
3.2	Spoil Tips	57
3.3	Subsidence Troughs	61
3.4	Sinkholes	69
3.5	Fissures and Thresholds	77
	References	79
4	Changes in Morphometric Parameters of Terrain Caused by Mining	83
4.1	Changes in Altitude	84
4.2	Changes in Relative Heights	86
4.3	Changes in Slope Inclinations	89
	References	93

5	Changes in the Circulation of Matter in Drainage Basins	95
5.1	Changes of Physicochemical Properties of the Transported Matter	100
5.2	Sediment Production Zone	105
5.3	Transfer Zone	111
5.4	Deposition Zone	122
	References	124
6	Changes in the Circulation of Matter in Landlocked Basins	129
	References	135
7	Anthropogenic Denudation Rate in the Upper Silesian Coal Basin	139
7.1	Anthropogenic Denudation Rates Calculated from Raw Materials Output	140
7.2	Anthropogenic Denudation Rates Calculated from Morphometric Analysis	149
7.3	Forecasts of Anthropogenic Denudation	153
	References	158
8	Anthropogenic Denudation Rate in Other Mining Areas	161
8.1	Mining Areas in Poland	162
8.2	The Ostrava-Karvina Coal Basin, Czech Republic	183
8.3	The Ruhr Coal Basin (the Ruhr District), Germany	190
	References	197
9	Conclusions	203
	Index	207

The Impact of Mining on the Landscape

A Study of the Upper Silesian Coal Basin in Poland

Dulias, R.

2016, VIII, 209 p. 56 illus., 2 illus. in color., Hardcover

ISBN: 978-3-319-29539-8
