|          |   |    |
|----------|---|----|
| <b>1</b> | <b>Summary of Thermodynamic Potentials</b>                      | 1  |
| 1.1      | Entropy: Isolated Systems                                       | 1  |
| 1.2      | Helmholtz Free Energy: Closed Systems                           | 4  |
| 1.3      | Gibbs Free Energy: Isothermal–Isobaric Systems                  | 5  |
| 1.4      | Grand Potential: Open Systems                                   | 6  |
| 1.5      | Response Functions and Maxwell Relations                        | 6  |
|          | Exercises   | 11 |
|          | References  | 11 |
| <b>2</b> | <b>Summary of Equilibrium Statistical Ensembles</b>             | 13 |
| 2.1      | Phase Space   | 13 |
| 2.2      | Gibbs Entropy Functional  | 14 |
| 2.3      | Microcanonical Ensemble: Isolated Systems                       | 16 |
| 2.4      | Canonical Ensemble: Closed Systems                              | 18 |
| 2.5      | Grand Canonical Ensemble: Open Systems                          | 20 |
| 2.6      | Isothermal–Isobaric Ensemble: Isothermal–Isobaric Systems       | 23 |
| 2.7      | Ideal Gas   | 25 |
| 2.8      | Interacting Systems   | 27 |
| 2.9      | Generalization to Mixtures                                      | 29 |
|          | Exercises   | 30 |
|          | References  | 31 |
| <b>3</b> | <b>Density Expansion of the Equation of State</b>               | 33 |
| 3.1      | Pair Interaction Potential and Mayer Function                   | 33 |
| 3.2      | Virial Expansion  | 39 |
| 3.3      | Diagrammatic Method   | 42 |
| 3.4      | Grand Canonical Ensemble: Expansion in Powers of Fugacity       | 46 |
| 3.5      | Expansion of Pressure in Powers of Density: Virial Coefficients | 48 |
| 3.6      | Virial Coefficients for Mixtures                                | 50 |
| 3.7      | Second Virial Coefficient                                       | 54 |

|          |  |            |
|----------|--|------------|
| 3.8      | Higher-Order Virial Coefficients for Hard Spheres .....                                    | 58         |
| 3.8.1    | One-Component Systems .....  | 58         |
| 3.8.2    | Multicomponent Systems .....   | 63         |
| 3.9      | Simple Approximations for the Equation of State of Hard<br>Disks and Spheres .....         | 72         |
| 3.9.1    | Hard Disks ( $d = 2$ ) .....   | 73         |
| 3.9.2    | Hard Spheres ( $d = 3$ ) .....   | 75         |
| 3.9.3    | Extension to Mixtures: Effective One-Component<br>Fluid Approaches .....                   | 78         |
|          | Exercises .....  | 89         |
|          | References .....   | 92         |
| <b>4</b> | <b>Spatial Correlation Functions and Thermodynamic Routes .....</b>                        | <b>97</b>  |
| 4.1      | Reduced Distribution Functions .....   | 97         |
| 4.2      | Correlation Functions .....  | 100        |
| 4.3      | Radial Distribution Function .....   | 101        |
| 4.4      | Ornstein–Zernike Relation and the Direct Correlation Function .....                        | 104        |
| 4.5      | Thermodynamics from the Radial Distribution Function .....                                 | 106        |
| 4.5.1    | Compressibility Route .....  | 106        |
| 4.5.2    | Energy Route .....   | 107        |
| 4.5.3    | Virial Route .....   | 108        |
| 4.5.4    | Chemical-Potential Route .....   | 109        |
| 4.5.5    | A Master Route: The Free Energy .....  | 111        |
| 4.6      | Extension to Mixtures .....  | 115        |
| 4.6.1    | Thermodynamic Routes .....   | 118        |
| 4.6.2    | Hard Spheres .....   | 120        |
| 4.7      | The Thermodynamic Inconsistency Problem .....  | 122        |
|          | Exercises .....  | 123        |
|          | References .....   | 123        |
| <b>5</b> | <b>One-Dimensional Systems: Exact Solution<br/>for Nearest-Neighbor Interactions .....</b> | <b>125</b> |
| 5.1      | Nearest-Neighbor and Pair Correlation Functions .....                                      | 125        |
| 5.2      | Nearest-Neighbor Distribution: Isothermal–Isobaric Ensemble .....                          | 128        |
| 5.3      | Exact Radial Distribution Function and Thermodynamic<br>Quantities .....                   | 129        |
| 5.4      | Extension to Mixtures .....  | 131        |
| 5.4.1    | Binary Case .....  | 133        |
| 5.5      | Examples .....   | 135        |
| 5.5.1    | Square Well .....  | 135        |
| 5.5.2    | Square Shoulder .....  | 140        |
| 5.5.3    | Hard Rods and Sticky Hard Rods .....   | 141        |
| 5.5.4    | Mixtures of Nonadditive Hard Rods .....  | 146        |
|          | Exercises .....  | 153        |
|          | References .....   | 155        |

| <b>6 Density Expansion of the Radial Distribution Function and Approximate Integral Equations</b>                           | 157 |
| 6.1 Introduction  | 157 |
| 6.2 External Force: Functional Analysis   | 158 |
| 6.3 Root and Field Points   | 159 |
| 6.4 Expansion of the Pair Correlation Function in Powers of Fugacity  | 162 |
| 6.5 Expansion of the Radial Distribution Function in Powers of Density  | 164 |
| 6.5.1 Some Examples   | 165 |
| 6.6 Equation of State: Virial Coefficients  | 168 |
| 6.7 Classification of Open Star Diagrams  | 170 |
| 6.8 Approximate Closures  | 175 |
| 6.8.1 Hypernetted-Chain and Percus–Yevick Approximate Integral Equations  | 176 |
| 6.8.2 A Few Other Closures  | 181 |
| 6.8.3 Linearized Debye–Hückel and Mean Spherical Approximations   | 182 |
| 6.9 Some Thermodynamic Consistency Relations in Approximate Theories  | 184 |
| 6.9.1 Are the Virial-Route HNC and the Compressibility-Route Percus–Yevick Values of the Fourth Virial Coefficient Related? | 185 |
| 6.9.2 Energy and Virial Routes in the Linearized Debye–Hückel and Mean Spherical Approximations                             | 189 |
| 6.9.3 “Energy” Route in Hard-Sphere Liquids   | 194 |
| Exercises   | 197 |
| References  | 200 |
| <b>7 Exact Solution of the Percus–Yevick Approximation for Hard Spheres ... and Beyond</b>                                  | 203 |
| 7.1 Introduction  | 203 |
| 7.2 An Alternative Approach: The Rational-Function Approximation  | 204 |
| 7.2.1 Introduction of $\widehat{G}(s)$  | 205 |
| 7.2.2 Definition of $\widehat{F}(s)$  | 206 |
| 7.2.3 Exact Properties of $\widehat{F}(s)$ for Small $s$ and Large $s$  | 207 |
| 7.2.4 Construction of the Approximation: Percus–Yevick Solution   | 209 |
| 7.3 Percus–Yevick Approximation for Hard-Sphere and Sticky-Hard-Sphere Mixtures   | 217 |
| 7.3.1 Sticky-Hard-Sphere Mixtures   | 217 |
| 7.3.2 Additive Hard-Sphere Mixtures   | 222 |
| 7.3.3 One-Component Sticky Hard Spheres   | 225 |

|  |     |
|--|-----|
| 7.4 Beyond the Percus–Yevick Approximation .....   | 237 |
| 7.4.1 Hard Spheres .....                           | 238 |
| 7.4.2 Square-Well and Square-Shoulder Fluids ..... | 240 |
| Exercises .....                                    | 247 |
| References .....                                   | 251 |
| <b>Index</b> .....                                 | 255 |
| References .....                                   | 260 |

A Concise Course on the Theory of Classical Liquids

Basics and Selected Topics

Santos, A.

2016, XXX, 271 p. 124 illus., 94 illus. in color., Softcover

ISBN: 978-3-319-29666-1
