

Contents

1	Basics	1
1.1	Definition and Examples	1
1.2	The Diagram	4
1.3	Order-Preserving Mappings/Isomorphism	8
1.4	Fixed Points	12
1.5	Ordered Subsets/The Reconstruction Problem.....	15
	Remarks and Open Problems	20
2	Chains, Antichains, and Fences	23
2.1	Chains and the Rank of an Element	23
2.2	A Remark on Duality	28
2.3	Antichains and Dilworth's Chain Decomposition Theorem.....	30
2.4	Dedekind Numbers	34
2.5	Fences and Crowns	37
2.6	Connectivity	39
2.7	Maximal Elements in Infinite Sets: Zorn's Lemma.....	42
2.8	Well-Ordered Sets	45
	Remarks and Open Problems	48
3	Upper and Lower Bounds	53
3.1	Extremal Elements	53
3.2	Covers.....	61
3.3	Lowest Upper and Greatest Lower Bounds	64
3.4	Chain-Completeness and the Abian–Brown Theorem	70
3.5	The Abian–Brown Theorem in Analysis	73
	Remarks and Open Problems	75

4	Retractions	77
4.1	Definition and Examples	77
4.2	Fixed Point Theorems	82
4.2.1	Removing Points	83
4.2.2	The Comparable Point Property	85
4.3	Dismantlability	87
4.3.1	(Connectedly) Collapsible Ordered Sets	90
4.4	The Fixed Point Property for Ordered Sets of Width 2 or Height 1	94
4.4.1	Width 2	94
4.4.2	Height 1	95
4.4.3	Minimal Automorphic Ordered Sets	97
4.5	Isotone Relations	100
4.6	Li and Milner's Structure Theorem	103
	Remarks and Open Problems	109
5	Constraint Satisfaction Problems	113
5.1	Algorithms	114
5.2	Polynomial Efficiency	117
5.3	NP Problems and Constraint Satisfaction Problems	119
5.4	Search Algorithms	124
5.5	Expanded Constraint Networks and Local Consistency	130
5.6	Retractions and $FPF(P)^{\text{exp}}$	137
5.7	Essentially Controlled Networks	141
5.8	Retractable Points and Constraint Propagation for $FPF(P)$	145
	Remarks and Open Problems	150
6	Graphs and Homomorphisms	155
6.1	A Fixed Edge Theorem for Simplicial Homomorphisms	155
6.2	The Fixed Clique Property for Simplicial Endomorphisms	158
6.3	(Graph) Homomorphisms	161
6.4	The Fixed Vertex Property for Graph Endomorphisms	164
6.5	Embedding the Fixed Point Property into the Fixed Vertex Property	167
	Remarks and Open Problems	171
7	Lexicographic Sums	173
7.1	Definition and Examples	173
7.2	The Canonical Decomposition	177
7.3	Comparability Invariance	180
7.4	Lexicographic Sums and Reconstruction	186
7.5	An Almost Lexicographic Construction	190
7.6	NP-Completeness of $FPF(P)$	192
	Remarks and Open Problems	195

8	Lattices	199
8.1	Definition and Examples	199
8.2	Fixed Point Results/The Tarski–Davis Theorem	203
8.2.1	Preorders/The Bernstein–Cantor–Schröder Theorem	204
8.2.2	Other Results on the Structure of Fixed Point Sets	206
8.3	Embeddings/The Dedekind–MacNeille Completion	209
8.4	Irreducible Points in Lattices	213
8.5	Finite Ordered Sets vs. Distributive Lattices	217
8.6	More on Distributive Lattices	220
	Remarks and Open Problems	225
9	Truncated Lattices	227
9.1	Definition and Examples	227
9.2	Recognizability and More	229
9.3	Simplicial Complexes	231
9.4	The Fixed Point Property for Truncated Lattices	234
9.5	Triangulations of S^n	239
9.6	Reduction Theorems from Algebraic Topology	243
9.7	Truncated Noncomplemented Lattices	248
	Remarks and Open Problems	250
10	Dimension	255
10.1	(Linear) Extensions of Orders	255
10.2	Balancing Pairs	258
10.3	Defining the Dimension	263
10.3.1	A Characterization of Realizers	267
10.4	Bounds on the Dimension	270
10.5	Ordered Sets of Dimension 2	273
	Remarks and Open Problems	276
11	Interval Orders	279
11.1	Definition and Examples	279
11.2	The Fixed Point Property for Interval Orders	284
11.3	Dedekind’s Problem for Interval Orders and Reconstruction	286
11.4	Interval Dimension	289
11.5	Algorithms for Interval Orders	291
	Remarks and Open Problems	293
12	Sets $P^Q = \text{Hom}(Q, P)$ and Products	297
12.1	Sets $P^Q = \text{Hom}(Q, P)$	297
12.2	Finite Products	300
12.2.1	Finite Products and the Fixed Point Property	303
12.3	Infinite Products	309
12.4	Hashimoto’s Theorem and Automorphisms of Products	313
12.4.1	Fixed Points of Automorphisms of Products	321
12.5	Arithmetic of Ordered Sets	324
	Remarks and Open Problems	328

13	Enumeration of Ordered Sets	333
13.1	Graded Ordered Sets	333
13.2	The Number of Graded Ordered Sets	336
13.3	The Asymptotic Number of Graded Ordered Sets	340
13.4	The Number of Nonisomorphic Ordered Sets	350
	Remarks and Open Problems	354
A	Some Algebraic Topology	357
A.1	Chain Complexes	358
A.2	The Lefschetz Number	361
A.3	(Integer) Homology	362
A.4	A Homological Reduction Theorem	365
	Remarks and Open Problems	372
B	Some Discrete Morse Theory	375
B.1	Discrete Morse Functions	375
B.2	Collapsing Schemes	379
B.3	Straightening Formulas	384
B.4	Hits and Fixed Simplices	388
	Remarks and Open Problems	391
	References	393
	Index	407

Ordered Sets

An Introduction with Connections from Combinatorics to
Topology

Schröder, B.

2016, XVI, 420 p. 53 illus., 10 illus. in color., Hardcover

ISBN: 978-3-319-29786-6

A product of Birkhäuser Basel
