

Contents

1	Introduction	1
1.1	Motivation	1
1.2	Characteristic Applications of Non-Road Mobile Machines	3
1.3	Configurations of Hybrid Electric Powertrains	4
1.4	Challenges in Controlling Hybrid Electric Vehicles	5
1.5	Proposed Concepts	6
1.6	Main Contributions	8
2	Battery Management	11
2.1	Introduction	11
2.1.1	Motivation	11
2.1.2	Cell Chemistry-Dependent System Behavior of Batteries	12
2.1.3	Challenges in Dynamic Battery Model Identification	13
2.1.4	State of the Art	14
2.1.5	Solution Approach	18
2.2	Data-Based Identification of Nonlinear Battery Cell Models	20
2.2.1	General Architecture and Structure of Local Model Networks	20
2.2.2	Construction of LMN Using LOLIMOT	21
2.2.3	Battery Cell Modeling Using LMN	22
2.3	Optimal Model-Based Design of Experiments	26
2.3.1	Optimization Criteria Based on the Fisher Information Matrix	27
2.3.2	Formulation of the Constrained Optimization Problem	29
2.3.3	Constrained Optimization	30
2.3.4	Extensions on the Excitation Sequence	32

2.4	Temperature Model of Battery Cells.	33
2.5	Battery Module Model Design.	35
2.5.1	Battery Cell Balancing in Battery Modules.	35
2.5.2	LMN-Based Battery Module Design.	35
2.6	State of Charge Estimation.	37
2.6.1	General Architecture of the SoC Observer Scheme.	38
2.6.2	SoC Fuzzy Observer Design.	38
3	Results for BMS in Non-Road Vehicles.	43
3.1	Generation of Reproducible High Dynamic Data Sets.	43
3.1.1	Measurement Procedures.	44
3.1.2	Test Hardware for Battery Cells.	44
3.1.3	Test Hardware for Battery Modules.	45
3.2	Battery Cells and Battery Module Specifications.	46
3.3	Training Data for Battery Cell Models.	46
3.4	Validation of Battery Cell Model Accuracy.	48
3.4.1	Battery Model Quality Improvement with Optimal DoE.	48
3.4.2	Comparison of Battery Cell Models with Different LMN Structures and Cell Chemistries.	51
3.4.3	Dynamic Accuracy of the LMN Battery Models.	54
3.5	Battery Cell Temperature Model Accuracy.	57
3.6	Battery Module Model Accuracy.	58
3.7	SoC Estimation Accuracy.	61
3.7.1	Battery Module SoC Estimation Results.	62
3.7.2	Battery Cell SoC Estimation Results.	64
4	Energy Management.	67
4.1	Introduction.	67
4.1.1	Challenges for Energy Management Systems.	67
4.1.2	State-of-the-Art.	68
4.1.3	Solution Approach.	69
4.2	Basic Concept of Model Predictive Control.	70
4.3	Cascaded Model Predictive Controller Design.	72
4.3.1	Architecture of the Control Concept.	72
4.3.2	System Models for Controller Design.	73
4.3.3	Structured Constraints for Controllers.	77
4.3.4	Slave Controller.	79
4.3.5	Master Controller.	83
4.4	Load and Cycle Prediction for Non-Road Machinery.	90
4.4.1	Short-Term Load Prediction.	90
4.4.2	Cycle Detection.	93

- 5 Application Example: Wheel Loader. 97**
 - 5.1 Hardware Configuration of the Hybrid Powertrain Test bed. 97
 - 5.2 Energy Management in Wheel Loaders 98
 - 5.2.1 User-Defined Tuning of the Controller Penalties 99
 - 5.2.2 Simulation Results. 99
 - 5.2.3 Experimental Results 101
- 6 Conclusion and Outlook. 107**
- References 109**

Energy Efficient Non-Road Hybrid Electric Vehicles

Advanced Modeling and Control

Unger, J.; Quasthoff, M.; Jakubek, S.

2016, IX, 116 p. 51 illus., 9 illus. in color., Softcover

ISBN: 978-3-319-29795-8
