

Contents

1	Introduction	1
1.1	Scope of the Book	1
1.2	Outline of the Book	4
2	Preliminaries	7
2.1	Quadratic Interpolation	7
2.2	Approximations Using Lagrangian Polynomial	8
2.3	Approximations Using Taylor Series	10
2.4	General Elimination Technique for Linear Systems	13
2.5	Solution Techniques for Special Linear Systems	16
3	Governing Differential Equations	19
3.1	Governing Equations	19
3.2	Characteristics of the Governing Equations	20
3.3	The Velocity-Pressure Coupling Problem	21
4	Finite Difference Formulations	25
4.1	Manipulation of the Momentum Equations	25
4.2	Grid Arrangement for the Solution	26
4.3	Profile Assumptions for the Discretizations	28
4.4	Discretization of the Governing Equations	31
4.4.1	Discretization of the u -Momentum Equation	31
4.4.2	Discretization of the v -Momentum Equation	35
4.4.3	Discretization of the Mass Conservation Equation	38
4.5	A Discussion on the Profile Assumptions	38
5	Preparations for Solution	41
5.1	The Solution Region	41
5.2	Boundary Conditions	42

5.2.1	Types of Boundary Conditions	43
5.2.2	Application of Various Types of Boundary Conditions into the Momentum Equations.	45
5.2.3	Application of Boundary Conditions into the Coupled Equations	47
5.3	Incorporating Relaxation	54
6	Assembling the Discretized Equations into a Block Matrix System.	57
6.1	The Numbering Scheme	57
6.2	Construction of the Block Matrix System	58
6.3	Disadvantages of the Block Matrix.	61
7	The Solution Procedure: Block Incomplete Decomposition	65
7.1	Properties and Advantages of the Block Matrix	66
7.2	General Incomplete Decomposition	68
7.3	An Incomplete Decomposition of the Block System (BIP)	71
7.4	The Block Solution Procedure.	77
7.5	Complete Solution of the Flow Field	78
7.6	A Family of Procedures: BIPEN, FICS-1, FICS-2	78
7.7	Storage Requirements and Complexity	82
7.7.1	Storage Requirements.	82
7.7.2	Complexity.	83
7.8	The Simplest Case (Simple Implicit Coupled Solution—SICS)	84
7.8.1	The Solution Algorithm (SICS).	85
7.8.2	Properties and Benefits of SICS.	87
8	Applications and Testing	89
8.1	Benchmark Fluid Flow Problems	89
8.2	Testing Criteria	99
8.3	Performance Analysis and Comparisons	102
8.4	A Discussion of the Mechanism of the Procedures	106
8.5	Comparison with the Segregated-Type Procedures	108
8.6	Convergence Characteristics and Performances of SICS and SIMPLER: A Relative Comparison	109
9	Special Cases	115
9.1	Time-Dependent Problems	115
9.2	Stoke's Flow Equations	119
9.3	Turbulent Flows and Heat Transfer	119
9.4	Adaptation to Existing Codes	120
9.5	Three-Dimensional Problems	120
10	Concluding Remarks	127

**Appendix A: A Critical Survey of Literature—An Adventure
into Perfection 129**

**Appendix B: Segregated Solution Procedures:
SIMPLE and SIMPLER 141**

**Appendix C: FORTRAN Subroutines—BLOCKSOLFICS2
and BLOCKSOLSICS. 159**
