

# Contents

<b>1</b>	<b>Brief Review of Dissipativity Theory</b>	1
1.1	Dissipative Systems	1
1.2	Graphical Interpretation	3
1.3	Differential Characterization of Dissipativity	4
1.4	Linear Systems	6
1.5	Numerical Certification of Dissipativity	8
1.6	Using Dissipativity for Reachability and Stability	9
	References	11
<b>2</b>	<b>Stability of Interconnected Systems</b>	13
2.1	Compositional Stability Certification	13
2.2	Small Gain Criterion	15
2.3	Passivity Theorem	16
2.3.1	Skew Symmetric Interconnections	17
2.3.2	Negative Feedback Cyclic Interconnection	17
2.3.3	Extension to Cactus Graphs	20
	References	21
<b>3</b>	<b>Equilibrium Independent Stability Certification</b>	23
3.1	Equilibrium Independent Dissipativity (EID)	24
3.2	Numerical Certification of EID	26
3.3	The Stability Theorem	27
	References	28
<b>4</b>	<b>Case Studies</b>	29
4.1	A Cyclic Biochemical Reaction Network	29
4.2	A Vehicle Platoon	31
4.3	Internet Congestion Control	35
4.4	Population Dynamics of Interacting Species	37
	References	39

<b>5 From Stability to Performance and Safety.</b>	41
5.1 Compositional Performance Certification.	41
5.2 Safety under Finite Energy Inputs	43
5.3 Platoon Example Revisited	46
References	48
<b>6 Searching Over Subsystem Dissipativity Properties</b>	49
6.1 Conical Combinations of Multiple Supply Rates	49
6.2 Mediated Search for New Supply Rates	50
References	53
<b>7 Symmetry Reduction</b>	55
7.1 Reduction for Stability Certification	55
7.2 Cyclic Interconnections Revisited.	58
7.3 Reduction for Performance Certification	60
References	62
<b>8 Dissipativity with Dynamic Supply Rates</b>	63
8.1 Generalizing the Notion of Dissipativity	63
8.2 Stability of Interconnections	66
8.3 Certification of Performance	69
8.4 Search for Dynamic Supply Rates	71
8.5 EID with Dynamic Supply Rates	71
References	72
<b>9 Comparison to Other Input/Output Approaches</b>	73
9.1 The Classical Input/Output Theory.	73
9.2 Integral Quadratic Constraints (IQCs).	75
9.3 The IQC Stability Theorem.	77
9.4 Conclusions and Further Results	79
References	80
<b>Appendix A: Sum-of-Squares (SOS) Programming.</b>	83
<b>Appendix B: Semidefinite Programming (SDP)</b>	89
<b>Appendix C: The KYP Lemma</b>	95
<b>Appendix D: True/False Questions for Chapter 1.</b>	97
<b>Series Editors' Biographies</b>	99
<b>Index</b>	101

Networks of Dissipative Systems

Compositional Certification of Stability, Performance,  
and Safety

Arcak, M.; Meissen, C.; Packard, A.

2016, X, 102 p. 19 illus., 6 illus. in color. With online  
files/update., Softcover

ISBN: 978-3-319-29927-3
