1	Deterministic Chaos Phenomenon from the Standpoint of Information Protection Tasks	1
1.1	Principles and Concepts of the Classical Cryptology as the Traditional Strategy of Information Protection	1
1.2	The Optical Vortex as a Product of the Beam Perturbation and the Data Carrier in the Communication System	7
1.3	Examples of Dynamic Systems in Radiophysics and Optics with Complicated Behavior.	9
1.3.1	Examples of Radio Physical Systems with Complicated Behavior	9
1.3.2	Designs of Nonlinear Elements	21
1.3.3	The Nonlinear Ring Interferometer as an Example of the Optical System with Complex Behavior	25
1.4	Principles of Information Protection by the Deterministic Chaos	30
1.4.1	General Schemes and Functioning Principles of the Confidential Communication Systems in the Mode of the Dynamic Chaos	34
1.4.2	Examples of Radio Physical Systems for Information Protection.	46
1.4.3	Examples of the Application of Deterministic Chaos in Optical System of the Confidential Communication	49
1.4.4	Influence of Disturbing Factors on the Characteristics of the Data Transmission System	54
1.4.5	Classification of Communication Systems Using the Dynamic Chaos	59
1.5	Conclusions	61
	References	62

2 Radiophysical and Optical Chaotic Oscillators Applicable for Information Protection	71
2.1 The Radio-Electronic Oscillator of the Deterministic Chaos with Nonlinearity in the Form of Parabola Compositions	71
2.1.1 The Structure and the Mathematical Model of the Oscillator	71
2.1.2 The Nonlinear Element: A Structure, a Mathematical Description.	75
2.1.3 Analysis of Equilibrium State Stability in the Model of the Deterministic Chaos Oscillator	77
2.2 Simulation of Static and Dynamic Modes of the Deterministic Chaos Oscillator	80
2.2.1 Stability of Equilibrium States	80
2.2.2 Operating Modes in the Deterministic Chaos Oscillator	86
2.3 Modes and Scenarios of Transitions to Chaotic Oscillations in the Radio-Frequency Oscillator of Deterministic Chaos	92
2.3.1 The Breadboard of Deterministic Chaos Oscillator.	92
2.3.2 Transition to the Chaos Through the Period Doubling Bifurcation.	95
2.3.3 Transition to the Chaos Through Intermittency	96
2.3.4 Transition to the Chaos Through a Collapse of Two-Frequency Oscillating Mode	99
2.3.5 Transition to the Chaos Through a “Semi-Torus” Collapse.	101
2.3.6 Bifurcation Diagrams.	105
2.4 The Ring Interferometer with the Kerr Nonlinear Medium and Its Modifications as the Deterministic Chaos Oscillators	108
2.4.1 Mathematical Models of Processes in the Nonlinear Ring Interferometer	108
2.4.2 Double-Circuit Nonlinear Ring Interferometer and Models of Processes in It.	127
2.4.3 Dynamics in the Ring Interferometer Models	140
2.4.4 The Nonlinear Fiber-Optical Interferometer.	150
2.4.5 The Double-Circuit NRI and Structurally Connected NRIs: Prospects for Chaos Generating and Data Processing	156
2.5 Conclusions	160
References	161

3 Radio Electronic System for Data Transmission on the Base of the Chaotic Oscillator with Nonlinearity in the form of Parabola Composition: Modeling and Experiment.	167
3.1 Description of the Data Transmission System	167
3.1.1 The Structure of the Data Transmission System on the Base of the Chaotic Oscillator, Its Mathematical Model, and a Quality Criteria	167
3.1.2 Temperature Dependence of the Transfer Characteristics of the Nonlinear Element	172
3.1.3 Temperature Compensation in the Voltage Limiter on the Shottky Diodes and a Choice of the Nonlinear Element Parameters	176
3.2 Numerical Modeling of the Data Transmission System Operation	181
3.2.1 Lack of the Coincidence Influence of the Transmitter and Receiver Parameters on the Data Transmission Quality	183
3.2.2 Temperature Mismatching Influence of the Transmitter and the Receiver on Data Transmission Quality	188
3.2.3 The Role of Noises, Filtering, Level-Discretization in the Communication Channel	193
3.2.4 From Bias Voltage Manipulation in the Oscillator of the Deterministic Chaos to Transmission and Reception of Digital Signals	195
3.3 Description and Characteristics of the Chaotic Communication System Breadboard, Experimental Reception-Transmission of Analog, Digital and Video Signals	199
3.3.1 The Breadboard of the Data Transmission System	200
3.3.2 SNR Measurement in the Laboratory Experiment at Mismatching of the Transmitter and the Receiver Parameters	203
3.4 Experimental Operation Studying of the Communication System with the Complete Chaotic Synchronization	204
3.4.1 Transmission and Reception of Analog, Digital and Video Signals	205
3.4.2 Influence of Data Transmission System Parameters on SNR	208
3.5 Conclusions	212
References	213

4	Single- and Double-Circuit Nonlinear Ring Interferometer as a Cipherer in Optical Systems of Synchronous Chaotic Communications	215
4.1	Confident Communication System Based on NRI	217
4.1.1	Substantiation of the Recovering Possibility for the Signal Made Chaotic by Means of the NRI	217
4.1.2	“Route-Operator Formalism” and Synthesis of the Cryptosystem Structural Scheme	220
4.1.3	Simulation of Secret Transmission of Images: Modes of Deterministic Spatial-Temporal and Spatial Chaos	230
4.1.4	Deciphering Error $\delta(r, t)$ as a Wave Process and Its Normalizing Amplitude A_δ as a Function of Setting Errors of the Decipherer. Evaluation of A_δ	234
4.1.5	Statistical Characteristics of the Relative Deciphering Error Amplitude $\delta\alpha(r, t)$: Simulation Data and Theoretical Estimations	237
4.1.6	Imitation of “Cracking” of the Delay Time in NRI	241
4.2	Imitation of the DNRI Parameters Cracking Based on the Correlation Analysis: Discussion of Advantages	249
4.2.1	The Case of Field Transformation in FBL (Time Delay Estimation)	249
4.2.2	Cases with the Field Rotation in the One Feedback Loop with the Same and Various Field Rotations in FBL	250
4.3	Conclusions	254
