

Contents

1	Introduction	1
1.1	Basic Concepts of Temperature, Heat and Heat Flux	1
1.1.1	Heat and Temperature	2
1.1.2	Heat Transfer Modes	2
1.1.3	The Three Kinds of Boundary Conditions	3
1.1.4	Transient or Unsteady-State Heat Conduction	8
1.2	Electric Circuit Analogy in One Dimension	10
1.3	Material Properties at Elevated Temperature	11
1.3.1	Structural Materials	13
1.3.2	Polymers and Composite Materials	15
1.3.3	Measurements of Material Properties	15
2	Steady-State Conduction	17
2.1	Plane Walls	18
2.2	Cylinders	22
3	Unsteady-State Conduction	25
3.1	Lumped-Heat-Capacity	25
3.1.1	Prescribed Heat Flux: BC of the Second Kind	26
3.1.2	Prescribed Gas Temperature: BC of the Third Kind—And the Concept of Time Constant	27
3.1.3	Conditions for Assuming Lumped-Heat-Capacity	31
3.2	Semi-infinite Solids	33
3.2.1	Constant Surface Temperature: First Kind of BC	35
3.2.2	Constant Heat Flux: Second Kind of BC	39
3.2.3	Constant Gas Temperature: Third Kind of BC	39
4	Boundary Conditions in Fire Protection Engineering	45
4.1	Radiation and Incident Radiation Temperature	46
4.2	Non-linear Convection	50
4.3	Mixed Boundary Conditions	51

4.4	Adiabatic Surface Temperature	53
4.4.1	Calculation of Adiabatic Surface Temperature and Incident Radiation	55
4.4.2	An Electric Circuit Analogy of the AST Boundary Condition	56
4.4.3	Boundary Condition Expressed as “Heat Flux”	60
4.4.4	Calculation of Time Constants for Bodies Exposed to Mixed Boundary Conditions	60
5	Heat Transfer by Radiation	65
5.1	Radiation Between Two Parallel Planes and Radiation Shields	68
5.2	View Factors	72
5.2.1	View Factors Between Differential Elements	74
5.2.2	View Factors Between a Differential Element and a Finite Area	76
5.2.3	View Factors Between Two Finite Areas	81
5.3	Radiation from Flames and Smoke	83
6	Heat Transfer by Convection	89
6.1	Heat Transfer Properties of Air and Water	90
6.2	Forced Convection	91
6.2.1	On Flat Plates	91
6.2.2	Across Cylinders	95
6.2.3	In Circular Pipes and Tubes	96
6.3	Natural or Free Convection	97
6.3.1	On Vertical and Horizontal Plates	97
6.3.2	In Enclosed Spaces	103
7	Numerical Methods	107
7.1	Lumped-Heat-Capacity	107
7.2	Superposition and the Duhamel’s Superposition Integral	111
7.3	The Finite Element Method for Temperature Analyses	114
7.3.1	One-Dimensional Theory	115
7.3.2	Computer Codes for Temperature Calculations	119
7.3.3	On Accuracy of Finite Element Computer Codes	120
7.3.4	On Specific Volumetric Enthalpy	121
8	Thermal Ignition Theory	125
8.1	Ignition Temperatures of Common Solids	125
8.2	Calculation of Time to Ignitions	127
8.2.1	Thin Solids	128
8.2.2	Semi-infinite Solids	129

9	Measurements of Temperature and Heat Flux	133
9.1	Thermocouples	133
9.1.1	Type of Thermocouples	133
9.1.2	Measurement of Temperature in Gases	134
9.1.3	Corrections of Time Delay	137
9.2	Heat Flux Meters	139
9.2.1	Calibration and Use of Heat Flux Meters	139
9.3	The Plate Thermometer	143
9.3.1	Introduction	143
9.3.2	Theory for Measuring Incident Heat Flux and Adiabatic Surface Temperature with Plate Thermometers	143
9.3.3	Alternative Plate Thermometer Designs	147
10	Post-Flashover Compartment Fires: One-Zone Models	153
10.1	Heat and Mass Balance Theory	154
10.2	Solution of the Fire Compartment Temperature	161
10.2.1	Semi-infinitely Thick Compartment Boundaries	161
10.2.2	Insulated and Uninsulated Boundaries with a Metal Core	165
10.2.3	Temperature-Dependent Material and Heat Transfer Properties: Numerical Solutions	171
11	Pre-flashover Compartment Fires: Two-Zone Models	175
11.1	Heat and Mass Balance Theory	177
11.2	Solution of the Upper Layer Fire Temperature	179
11.2.1	Semi-infinitely Thick Compartment Boundaries	179
11.2.2	Insulated and Uninsulated Boundaries with a Metal Core	181
12	Fire Exposure of Structures According to Standards	185
12.1	Standard Time Temperature Fire Curves	186
12.2	Parametric Fire Curves According to Eurocode	188
12.3	Summary of Heat Transfer Conditions According to Eurocodes	192
13	Temperature of Steel Structures	195
13.1	Thermal Properties of Steel	196
13.2	Example of Hot-Rolled Steel Section Dimensions	199
13.3	Protected Steel Sections Assuming Lumped-Heat-Capacity	200
13.3.1	Protection with Heavy Materials	204
13.3.2	Protected Steel Sections Exposed to Parametric Fire Curves	205
13.4	Unprotected Steel Sections	207
13.4.1	Shadow Effects	212

13.5	Examples of Steel Temperatures Calculated	
	Using a Finite Element Code	213
13.5.1	Unprotected Square Steel Tube Section	
	Attached to a Concrete Slab or Wall	214
13.5.2	Encased I-Section Connected	
	to a Concrete Structure	214
13.5.3	Unprotected I-Section Connected	
	to a Concrete Structure	215
14	Temperatures of Concrete Structures	217
14.1	Thermal Properties of Concrete	217
14.2	Penetration Depth in Semi-infinite Structures	220
14.3	Explicit Formula and Diagrams	220
14.4	Fire Protected Concrete Structures	224
15	Temperature of Timber Structures	227
15.1	Thermal Properties of Wood	227
15.2	Charring Depth According to Eurocode 5	228
	Review Questions	235
	References	241

Temperature Calculation in Fire Safety Engineering

Wickström, U.

2016, XIII, 243 p. 148 illus., 24 illus. in color., Hardcover

ISBN: 978-3-319-30170-9
