

Contents

1	Set Theory and Numbers	1
1.1	Terms and Notation	1
1.2	Indexed Families	3
1.3	Algebras and σ -Algebras of Sets	4
1.4	Orderings	6
1.5	Sequences in \mathbb{R} and $\overline{\mathbb{R}}$	7
1.6	Lim sup and Lim inf	9
1.7	Open and Closed Sets	10
1.8	Closures	12
1.9	Directed Sets and Nets	13
1.10	Compactness	14
1.11	Continuous Functions	16
1.12	Problems	19
2	Measure on the Real Line	25
2.1	Introduction	25
2.2	Lebesgue Outer Measure	26
2.3	General Outer Measures	28
2.4	Measure from Outer Measure	31
2.5	Approximation of Measurable Sets	35
2.6	LimSup and LimInf of a Sequence of Sets	37
2.7	The Existence of a Non-measurable Set	38
2.8	Cantor Set	39
2.9	Problems	40
3	Measurable Functions	45
3.1	Definition	45
3.2	Limits and Special Functions	48
3.3	Approximations and Theorems of Lusin and Egoroff	51
3.4	Problems	55

4	Integration	57
4.1	The Riemann Integral	57
4.2	The Integral of Simple Functions	60
4.3	The Integral of Bounded Measurable Functions	62
4.4	The Integral of Nonnegative Measurable Functions	65
4.5	The Integral of Measurable Functions	68
4.6	Generalization of Fatou's Lemma	70
4.7	Improper Riemann Integral	71
4.8	Convergence in Measure	72
4.9	Problems	73
5	Differentiation and Integration	79
5.1	Introduction	79
5.2	A Covering Theorem for \mathbb{R}	80
5.3	A Local Maximal Function	81
5.4	Differentiation	82
5.5	Functions of Bounded Variation	84
5.6	Absolute Continuity	86
5.7	Problems	90
6	General Measure Spaces	95
6.1	Introduction	95
6.2	Integration	96
6.3	Signed Measures	102
6.4	Convexity and Jensen's Inequality	105
6.5	Problems	107
7	Introduction to Metric and Normed Spaces	109
7.1	Metric Spaces	109
7.2	Baire Category	112
7.2.1	Application to Differentiable Functions	114
7.3	Normed Spaces	114
7.4	Classical Normed Spaces	115
7.5	Linear Functionals	119
7.6	Problems	121
8	Hilbert Spaces	127
8.1	Basic Definitions	127
8.2	Basic Inequalities	128
8.3	Convex Sets, Orthogonality, and Bounded Linear Functionals	129
8.4	Radon-Nikodým Theorem	132
8.5	Orthonormal Families and Fourier coefficients	135
8.6	Separability	138
8.7	Unordered Sums and ℓ^2 Spaces	139
8.8	Fourier Series	140

8.9	Trigonometric Series	142
8.10	Problems	143
9	Topological Spaces	147
9.1	Neighborhoods	147
9.2	Metric and Topological Notions	150
9.3	Continuous Mappings	152
9.4	Sequences and Nets	152
9.5	Subspaces	154
9.6	Connectedness	155
9.7	Compact Spaces	156
9.8	Properties of Topologies	160
9.9	Product Spaces, Metrization, and Compactification	163
9.10	Ascoli-Arzelá Theorem	169
9.11	Stone-Weierstrass Theorem	172
	9.11.1 Vector Lattices	172
	9.11.2 Algebras	173
9.12	Problems	175
10	Measure Construction	179
10.1	Measures from Outer Measures	179
10.2	The Carathéodory Extension Theorem	180
10.3	Lebesgue Measure on Euclidean Space	183
10.4	Product Measures	185
10.5	Other Integrals	189
10.6	Problems	189
11	Banach Spaces	191
11.1	Banach Spaces	191
11.2	Return to Classical Normed Spaces	193
11.3	Dual Space of L^p	196
11.4	Hahn-Banach Theorem	199
11.5	Imbedding Into a Second Dual	202
11.6	Properties of Banach Spaces	202
11.7	Weak and Weak* Topologies	205
11.8	Functionals on Continuous Functions	206
11.9	Problems	218
A	Appendix on the Axiom of Choice	221
B	Appendix on Limit and Covering Theorems	225
B.1	A General Limit Theorem	225
B.2	Besicovitch and Morse Covering Theorems	228
B.3	The Best Constant and Proof of Besicovitch's Theorem	230
B.4	Proof of Morse Covering Theorem	232

C	Appendix on Infinitesimal Analysis and Measure Theory	235
C.1	Basic Nonstandard Analysis	235
C.2	A Simple Extension of the Real Numbers	236
C.3	The Transfer Principle	238
C.4	Using the Transfer Principle	240
C.5	Properties of ${}^*\mathbb{R}$	241
C.6	The Nonstandard Natural Numbers and Hyperfinite Sets	243
C.7	Sequences	244
C.8	Open Sets in the Reals	245
C.9	Limits and Continuity	245
C.10	Differentiation	246
C.11	Riemann Integration	247
C.12	Metric and Topological Spaces	249
C.13	Measure and Probability Theory	251
D	Answers	255
	References	267
	Index	271
