

Contents

1	Introduction	1
	References	14
2	First Definitions and Basic Properties	17
2.1	Rigid Cohomology and Adic Spaces	18
2.2	Rigid Cohomology over Laurent Series Fields	30
2.3	Sundry Properties of Rigid Spaces and Morphisms Between Them	35
2.4	Independence of the Frame	41
2.5	Relative Coefficients and Frobenius Structures	52
	References	68
3	Finiteness with Coefficients via a Local Monodromy Theorem	71
3.1	Monsky–Washnitzer Algebras and (φ, ∇) -Modules	72
3.1.1	Dagger Algebras over \mathcal{E}_K^\dagger	72
3.1.2	Monsky–Washnitzer Cohomology and (φ, ∇) -Modules	81
3.1.3	A Quillen–Suslin Theorem for Dagger Algebras	88
3.2	A p -Adic Local Monodromy Theorem After Kedlaya	89
3.2.1	Robba Rings for Dagger Algebras over \mathcal{E}_K^\dagger	90
3.2.2	Descending Unipotence from \hat{A} to A	95
3.2.3	Relative Local Monodromy for Dagger Algebras over \mathcal{E}_K^\dagger	99
3.3	Generic Pushforwards in Dimension 1	105
3.4	Finite Étale Pushforwards, Cohomology with Closed Support and a Gysin Isomorphism	109
3.4.1	Étale Pushforwards	110
3.4.2	Cohomology with Support in a Closed Subscheme	113
3.4.3	Logarithmic Monsky–Washnitzer Cohomology for Affine Spaces	116
3.4.4	The Gysin Isomorphism	123

3.5	Finiteness of \mathcal{O}_K^\dagger -Valued Rigid Cohomology for Smooth Varieties	126
	References	129
4	The Overconvergent Site, Descent, and Cohomology with Compact Support	131
4.1	The Overconvergent Site	131
4.1.1	Overconvergent Varieties	134
4.1.2	Comparison Theorems for Cohomology	138
4.1.3	Cohomology with Closed Support	144
4.2	Cohomological Descent	148
4.3	Cohomology with Compact Support.	154
4.3.1	Definitions and Independence of the Frame	155
4.3.2	Non-embeddable Varieties and Descent	162
4.3.3	The Poincaré Pairing	167
4.4	Further Finiteness Results	168
	References	171
5	Absolute Coefficients and Arithmetic Applications	173
5.1	Absolute Coefficients and the Gauss–Manin Connection	175
5.1.1	Differential Calculus on Rigid Varieties over S_K	175
5.1.2	Overconvergent Isocrystals and Connections	179
5.1.3	The Gauss–Manin Connection and (φ, ∇) -Modules	184
5.1.4	The Case of a Point.	187
5.2	A p -adic Weight Monodromy Conjecture	189
5.2.1	Weil–Deligne Representations and Marmora’s Construction	191
5.2.2	Reduction to the Strictly Semistable Case.	195
5.2.3	An Equicharacteristic Hyodo–Kato Isomorphism	196
5.2.4	Global Approximation of Strictly Semistable Schemes.	204
5.2.5	Completion of the Proof.	205
5.2.6	The Generalised Weight Monodromy Conjecture.	206
5.3	Solvability, Log-Solvability and Reduction Types	211
5.4	Independence of ℓ for Curves over $k((t))$	220
	References	224

Rigid Cohomology over Laurent Series Fields

Lazda, C.; Pál, A.

2016, X, 267 p., Hardcover

ISBN: 978-3-319-30950-7
