Part I Preliminaries

1	Equilibrium	3
1.1	In the Beginning	3
1.2	Resultant Force and Resultant Moment	5
1.3	Equilibrium of a Solid	6
1.3.1	Three Scalar Conditions	7
1.4	Statically Equivalent Forces	8
1.4.1	Sliding Force	8
1.4.2	Couples	9
1.4.3	Reduction to One Force and One Couple	10
1.4.4	Uniformly Distributed Forces	11
1.4.5	Three Conditions Out of Five	12
1.5	Illustrated Examples	13
1.5.1	Moments with Respect to 3 Collinear Points	13
1.5.2	Auto-Equilibrated 2-Force and 3-Force Systems	14
1.6	The Internal Forces	14
1.6.1	Free-Body Diagrams	14
1.6.2	Equivalent System of Internal Forces	16
1.6.3	Normal Force, Shear Force and Bending Moment	17
1.7	Equilibrium Conditions Along the Element	18
1.7.1	Equilibrium of a Lamella dx of a Prismatic Element	18
1.7.2	Equilibrium at a Concentrated Load	20
1.8	Summing Up	21
2	The $nsm(x)$ Diagrams	23
2.1	Line Elements	23
2.2	Positive, Negative nsm	24
2.3	Calculating nsm at a Section	25

2.4	The <i>nsm</i> Diagrams	27
2.4.1	Basic Rules	27
2.4.2	Practical Guidelines for Positioning the <i>s</i> and <i>m</i> Diagrams	28
2.4.3	Relations Between the <i>s</i> and <i>m</i> Diagrams.	29
2.5	Typical Diagrams	31
2.6	Frames	36
2.6.1	Point Force on a Symmetric Frame with Inclined Columns.	36
2.6.2	Discontinuities at Point Loads	37
2.7	Inverse Analysis	39
2.8	Notes	40
2.8.1	You Cannot Split a Point.	40
2.8.2	What Is in a Name?	40
2.8.3	Why Tensile Side for Bending Moments?	41
2.8.4	How Are the Applied Forces Annulled?	42
2.8.5	Noise on the Way to Equilibrium	43
2.9	Illustrated Examples	44
2.9.1	Frame with Point Loads.	44
2.9.2	<i>Distributed</i> Forces Between Point Loads	45
2.9.3	Inverse Analysis of a Frame.	48
2.9.4	Kinked Bar	49
2.9.5	Broken Line with End-Couples.	50
2.10	Summing Up	50
3	Virtual Work	53
3.1	What Is Virtual Work?	53
3.2	Virtual Work for Particles in a Plane.	56
3.3	Virtual Work for a Frame Element	57
3.4	Equilibrium and Compatible Systems	60
3.4.1	Equilibrium Systems	60
3.4.2	Compatible Systems	60
3.5	Point Loads	61
3.6	Notes	63
3.6.1	$C\theta$ and $(m\kappa dx)$ Are Virtual Work Expressions	63
3.7	Illustrated Examples	64
3.7.1	An Example with Axial Forces.	64
3.7.2	Beam with Arc Shape Deformation	65
3.8	Summing Up	66
4	Deformations	67
4.1	The Bernoulli Hypothesis of Plane Sections.	67
4.2	Study of Deformation	68

4.3	Geometric Interpretation of the Deformations	71
4.3.1	Extensional Deformation Mode $\epsilon(x)$	71
4.3.2	Shear Deformation Mode $\gamma(x)$	72
4.3.3	Bending Deformation Mode $\kappa(x)$	72
4.4	Zero Deformation—Rigid-Body Displacement	73
4.5	In Vector Notation	73
4.6	Summing Up	73
5	Elasticity	75
5.1	Elastic Materials	75
5.2	Hooke's Law at Location y, z on the Cross-Section	76
5.3	The Timoshenko Beam	77
5.4	Euler–Bernoulli Beams	80
5.4.1	Virtual Work for Euler–Bernoulli Deformations	82
5.4.2	A Note on Curvature	83
5.4.3	Rods and Beams	84
5.5	Summing Up	84
6	The Unit-Load Method	85
6.1	The Equilibrium Configuration	85
6.1.1	The Unit-Load Method for Beams	86
6.1.2	Redundant Beams	88
6.2	The General Case	89
6.2.1	Computing a Displacement	90
6.2.2	Computing a Rotation	91
6.2.3	Frames, Beams and Trusses: Numerical Aspects	92
6.2.4	Formula for Calculating the Integrals	93
6.3	Trusses	94
6.4	Illustrated Examples	96
6.4.1	A Kinked Bar or Shifting from Normal to Bending Mode	96
6.4.2	Simple Beam with Distributed Forces	99
6.4.3	A Simple Frame	100
6.4.4	Ineffective Equilibrium Systems	104
6.5	Statically Redundant Examples	104
6.5.1	The Propped Cantilever	105
6.5.2	A Redundant Truss	107
6.5.3	A Portal Frame	109
6.6	Summing Up	110

Part II The Structures

7	Types of Structures	113
7.1	The Frame, the Beam and the Truss	113
7.2	Full Connectivity	115

7.3	Partial Connections Between Elements (Releases)	116
7.4	Partial Connections Between Elements and the Ground (Supports)	119
7.5	Summing Up	120
8	Structural Analysis.	121
8.1	The Two Main Methods of Analysis.	121
8.2	Analysis by the Force Method	122
8.2.1	Determining the Statical Redundancy	122
8.2.2	Releasing the Structure	123
8.2.3	The Compatibility Equations	124
8.3	Analysis by the Displacement Method.	125
8.3.1	Determining the Kinematical Degrees of Freedom	125
8.3.2	The Equilibrium Equations.	126
8.4	Summing Up	127
9	Qualitative Analysis and Design	129
9.1	An Introductory Example	129
9.2	The Basic Tools	131
9.3	Qualitative Analysis of Portal Frame.	132
9.4	Qualitative Design of Truss-Beams	132
9.5	Illustrated Examples	134
9.5.1	Continuous Beam	134
9.5.2	Continuous Beam on Five Supports	135
9.5.3	Fixed Portal Frame with Distributed Forces	136
9.5.4	Four-Cell-Truss-Beam on Three Supports.	137
9.5.5	Simple Truss-Beam.	139
9.5.6	Simply Supported Portal Frame	139
9.6	Summing Up	140
 Part III Flexibility		
10	Flexibility Coefficients.	143
10.1	Virtual Work with Related ϵ and n	143
10.2	Betti and Maxwell Theorems	145
10.2.1	Betti's Theorem	145
10.2.2	Degrees of Freedom	146
10.2.3	Maxwell's Theorem	147
10.3	Computing Influence or Flexibility Coefficients	148
10.4	Flexibility Matrices.	149
10.5	Properties of Flexibility Matrices	151
10.6	Forces and Displacements at the Degrees of Freedom	154
10.7	Generalized Degrees of Freedom	155

10.8	Illustrated Examples	155
10.8.1	Propped Cantilever with Hinge	155
10.8.2	Portal Frame	157
10.8.3	Simple Truss	158
10.8.4	Beam on Elastic Supports	159
10.8.5	Generalized Flexibility Matrix	160
10.8.6	Truss-Beam on Elastic Supports	161
10.8.7	Comparing the Beam and the Truss.	161
10.8.8	Propped Cantilever	164
10.9	Summing Up	165
11	Redundancy.	167
11.1	Typical Redundant Structures.	167
11.2	Definition of Statical Redundancy.	168
11.3	Counting the Redundancy	169
11.3.1	Elements and Nodes	169
11.3.2	Other Decompositions	171
11.3.3	Internal Releases.	172
11.3.4	Frames with Truss Elements.	173
11.4	Redundancy by Inspection.	175
11.4.1	The Simple Tree.	175
11.4.2	Recognizing the Redundancy by Releasing the Structure.	176
11.5	Beams.	177
11.5.1	Counting Unknowns and Equations.	177
11.5.2	Redundancy by Inspection	178
11.6	Trusses	180
11.6.1	Counting Unknowns and Equations.	180
11.6.2	Redundancy by Inspection	180
11.7	Mechanisms and Conditionally Stable Structures	182
11.7.1	Mechanism Versus Structure	182
11.7.2	Conditionally Stable Structures	184
11.7.3	$R \geq 0$ is not always sufficient for stability.	185
11.7.4	Large Internal Forces in Quasi Non-stable Structures.	186
11.8	Properties of Statically <i>Redundant</i> structures	187
11.8.1	Redundant Structures Are Safer	187
11.8.2	Redundant Structures Are Stiffer.	188
11.8.3	Flow of Forces	189
11.9	Properties of Statically <i>Determinate</i> Structures	189
11.9.1	No External Forces Means No Internal Forces	190
11.9.2	Heating Will Not Produce Internal Forces	191

11.9.3	No Prestressing Possible	192
11.9.4	Non-sensitivity to the Exact Dimensions of the Elements	193
11.10	Summing Up	194
12	The Force Method	195
12.1	Note	195
12.2	Released Structures Subjected to the Released Loads	196
12.2.1	$R = 1$ Propped Cantilever	196
12.2.2	$R = 2$ Continuous Beam	197
12.3	The Essence of the Force Method.	198
12.3.1	$R = 1$ Cantilever Beam with Elastic Spring	199
12.3.2	$R = 2$ Continuous Beam	200
12.4	Non-valid Releases	202
12.5	Formalizing the Compatibility Equations	203
12.6	Implementation of the Compatibility Equations	205
12.7	Solved Examples	206
12.7.1	$R = 1$ Propped Cantilever	206
12.7.2	$R = 2$ Beam on Mixed Supports.	208
12.7.3	$R = 2$ Beam: Releasing the Moments over Two Supports.	210
12.7.4	Same $R = 2$ Beam: Disconnecting Two Supports.	211
12.7.5	Beam on Many Supports—Three Moments Equations.	211
12.7.6	Beam Stiffened by Underlying Truss	216
12.7.7	$R = 2$ Portal Frame	218
12.7.8	$R = 2$ Frame	222
12.7.9	$R = 1$ Cable-Braced Frame	224
12.7.10	Fixed Circular Arch with Applied Couple	227
12.7.11	Grid of Beams Under Lateral Force.	229
12.7.12	$R = 2$ Truss	231
12.8	Summing Up	232
13	Applied Strains and Initial Stresses.	235
13.1	Initial Internal Forces	235
13.2	Mechanical Strain Versus Applied Strain.	235
13.3	Applied Strains in Axial and Bending Elements	236
13.3.1	The Case of Statically Determinate Structures.	238
13.3.2	Displacements of Determinate Structures Under Applied Strain	239
13.3.3	Extending the Scope of Applied Strain	240
13.4	Applied Strain in Redundant Structures	240
13.4.1	Internal Forces Due to Applied Strain	240
13.4.2	A Simple Example	241
13.4.3	The General Case	243

13.5	Illustrated Examples	243
13.5.1	Cantilever Propped on Two Supports	243
13.5.2	Determinate and Redundant Trusses	246
13.5.3	Fixed Elements	248
13.5.4	Partially Heated Beam	250
13.5.5	A Heated Roof	251
13.5.6	Rectangular Box with Applied Curvature on Top	252
13.6	Summary of the Technique	253
13.7	Lack-of-Fit	254
13.7.1	Lack-of-Fit as Applied Gaps	254
13.7.2	The Compatibility Equations	255
13.8	Prestressing	255
13.8.1	Why Prestressing?	256
13.8.2	Example	257
13.9	Summing Up	258

Part IV Stiffness

14	Introducing the Stiffness Method	261
14.1	Introduction	261
14.2	Pin-Jointed Ideal Trusses	262
14.3	Rigid-Jointed Trusses	264
14.4	The Fundamental Analysis Equations for Trusses	265
14.5	Virtual Work, $R = Q^T$	266
14.6	Solving the Equations by the Stiffness Method	267
14.7	Element Stiffness Matrices	268
14.8	Solved Example	269
14.9	Summing Up	271
15	Element Stiffness Matrices	273
15.1	Typical Elements	273
15.2	Element Stiffness Matrix	274
15.3	Some Properties of K	275
15.3.1	Physical Interpretation of the Coefficients of K	275
15.3.2	The Stiffness Matrix Is Symmetric	276
15.3.3	Relations Between Rows/Columns	277
15.3.4	An Element Stiffness Matrix Is Singular	279
15.3.5	Orthogonality of the Flexural and Extensional Modes	279
15.3.6	How Many Independent Coefficients Are There?	281
15.4	Formula for a Stiffness Coefficient	282

15.5	Computing the Stiffness Matrix of Uniform Elements	283
15.5.1	Uniform Beam (Flexural) Element Matrix	284
15.5.2	Uniform Rod (Extensional) Element Matrix	286
15.5.3	Extensional and Rotational Spring Element Matrices	286
15.6	Illustrated Examples	287
15.7	Element Stiffness Matrices by Shape Functions	289
15.7.1	The Flexural Matrix	289
15.7.2	The Extensional Matrix	291
15.8	Sample Rod and Beam Element Stiffness Matrices	293
15.8.1	Stepped Rod Element	293
15.8.2	Tapered Rod Element	294
15.8.3	Beam Element with Central Hinge	295
15.8.4	Beam Element with Central Lateral Guide	297
15.9	Note	298
15.10	Summing Up	298
16	Change of Coordinates	299
16.1	The Uniform Frame Element	299
16.2	Congruent Transformations	300
16.2.1	Permutations	302
16.2.2	Stiffness Matrix of an Oblique Element	302
16.3	Summing Up	305
17	Assembling the System Stiffness Matrix.	307
17.1	Modeling the Structure as the Sum of Its Elements	307
17.1.1	Elements and Nodes	307
17.1.2	Nodal or Global Coordinates, Degrees of Freedom	308
17.1.3	Element or Local Coordinates.	309
17.2	The Nodal Equilibrium Equations.	310
17.2.1	If the End-Displacements Are Known	310
17.2.2	If the End-Displacements Are Wrong	312
17.2.3	Equilibrium at the Unknown Degrees of Freedom	314
17.3	Assembling the System Stiffness Matrix	316
17.3.1	An Example for Assembling K.	317
17.3.2	Equilibrium and Assembly Are Equivalent.	319
17.4	More on Degrees of Freedom.	323
17.4.1	Degrees of Freedom in the Force and Displacement Methods	324
17.4.2	Singular Stiffness Matrices	324
17.5	Frames	326
17.5.1	Inextensible Elements	326
17.5.2	Congruent Transformation	326

17.5.3	Direct Assembly	328
17.5.4	Axial Elements Combined with Frame Elements	331
17.5.5	Trusses	333
17.6	Illustrated Examples	335
17.6.1	Fixed Beam with Elastic Supports.	335
17.6.2	Beam with Guides and a Roller	337
17.7	Summing Up	340
18	Loads on Elements	341
18.1	Element Loads	341
18.2	Fixed-End Reactions — f.e.r.	342
18.2.1	Typical f.e.r.	343
18.2.2	The Method in Three Steps	344
18.2.3	Equivalent Nodal Loads.	346
18.3	Illustrated Examples	346
18.3.1	Fixed Beam with Intermediate Support	346
18.3.2	Frame with Rigid Element	348
18.3.3	Fixed Haunched Beam	350
18.3.4	Fixed Beam with Central ‘Haunch’	351
18.3.5	Applied Strain Yielding Zero Equivalent Loads	352
18.3.6	Continuous Beam with Element Loads	353
18.3.7	Frame with Element Loads.	355
18.3.8	Fixed Beam with Central Guide	359
18.4	Summing Up	362
 Part V Four Additional Topics		
19	A Strain Energy Theorem—Moving Supports	365
19.1	Strain Energy	365
19.2	Minimum Strain Energy	366
19.3	Designing for Zero Slope	367
19.4	Illustrated Examples	368
19.4.1	Example 1	368
19.4.2	Example 2	368
19.4.3	Example 3: Several Moving Supports	368
19.5	Summing Up	369
20	Fully-Stressed Trusses	371
20.1	Fully Stressed Trusses.	371
20.2	General Redundant Truss.	372
20.3	Circle-Chord Trusses.	373
20.4	Extended Circle-Chord Trusses.	374
20.5	Summing Up	375

21	Frames Viewed as Generalized Trusses	377
21.1	Element Stiffness Matrices in Modal Coordinates	377
21.1.1	Axial Stiffness Matrix	378
21.1.2	Bending Stiffness Matrix	379
21.2	Coordinate Transformation.	379
21.3	Unimodal Normal, Moment and Shear Elements.	380
21.4	Frames Viewed as Trusses.	381
21.5	Explicit Analysis of a Propped Cantilever	382
21.6	Summing Up	384
22	Explicit Analysis	385
22.1	The Explicit Expression.	385
22.2	Example	388
22.3	Summing Up	390
 Part VI Epilogue		
23	Plus ça Change	393
23.1	The Three Pillars of Structures.	393
23.1.1	Equilibrium	393
23.1.2	Deformation (Virtual Work).	394
23.1.3	Elasticity	395
23.2	Methods of Analysis.	396
23.2.1	The Basic Method.	396
23.2.2	The Displacement Method	398
23.2.3	The Force Method	399
23.3	Equivalence	402
23.3.1	Columns and Rows of Q	402
23.3.2	On the Equilibrium and Compatibility Equivalence	403
23.4	Plus ça Change	404
