

Contents

1	Introduction	1
2	Quantum Chromodynamics	5
2.1	Mathematical Formulation.	6
2.2	Lattice Quantum Field Theory.	8
2.2.1	The Discretised Action.	9
2.2.2	Lattice Expectation Values	14
2.2.3	Scale Setting.	15
2.3	Strangeness and Charge Symmetry Violation in the Nucleon.	16
2.3.1	Nucleon Strangeness	17
2.3.2	Charge Symmetry Violation	18
	References	19
3	Chiral Perturbation Theory	21
3.1	Effective Field Theory	22
3.2	Chiral Symmetry	23
3.3	The Chiral Effective Lagrangian	25
3.3.1	Pseudo-Goldstone Bosons.	26
3.3.2	Octet Baryons.	28
3.3.3	Decuplet Baryons and Resonances.	30
3.3.4	Feynman Rules	33
3.4	Chiral Power Counting.	34
3.5	Finite-Range Regularisation	36
3.6	The Nucleon Mass.	37
3.7	Finite-Volume Corrections	39
	References	42
4	Octet Baryon Mass Splittings	43
4.1	SU(3) Chiral Extrapolation	44
4.2	Fits to Isospin-Averaged Lattice QCD Simulation Results.	48
4.3	Mass Splittings	53

4.4	Summary and Discussion	56
	References	58
5	Sigma Commutators	59
5.1	The Feynman-Hellmann Theorem	61
5.2	Light and Strange Sigma Terms.	62
5.3	Charge Symmetry Violation	66
5.4	Summary and Discussion	67
	References	69
6	Parton Distribution Moments	71
6.1	Moments of Quark Distribution Functions	72
6.2	Chiral Perturbation Theory	74
6.2.1	Feynman Rules	76
6.2.2	Feynman Diagrams	78
6.2.3	Loop Integrals.	79
6.2.4	Loop Contributions	80
6.2.5	Fit Functions	82
6.3	Fits to Lattice QCD Simulation Results	83
6.4	Hyperon Spin Fractions and the Proton Spin Puzzle.	86
6.5	Charge Symmetry Violation	88
6.5.1	Linear Flavour Expansion.	89
6.5.2	Chiral Expansion.	92
6.6	Summary and Discussion	95
	References	95
7	Electromagnetic Form Factors	99
7.1	Dirac, Pauli and Sachs Form Factors	100
7.2	Lattice QCD Simulation	101
7.2.1	Simulation Parameters	102
7.2.2	Lattice Method	104
7.2.3	Lattice Results for F_1 and F_2	105
7.3	Connected Chiral Perturbation Theory	108
7.3.1	Partially-Quenched Chiral Perturbation Theory	110
7.3.2	Electromagnetic Form Factors of the Octet Baryons.	112
7.4	Fits to Lattice Simulation Results.	117
7.4.1	Finite-Volume Corrections	118
7.4.2	Binning in Q^2	118
7.4.3	Fits	119
7.4.4	Test of Finite-Volume Effects	122
7.5	Electromagnetic Form Factors at the Physical Point	124
7.5.1	Isovector Quantities	125
7.5.2	Connected Baryon Form Factors	130
7.5.3	Magnetic and Electric Radii	133
7.5.4	Quark Form Factors.	137
7.5.5	Ratio of Electric and Magnetic Form Factors	140

7.6	Charge Symmetry Violation	142
7.6.1	CSV Form Factor Formalism	142
7.6.2	Disconnected Contributions to the CSV	144
7.6.3	CSV Relevant to the Strange Electromagnetic Form Factors	145
7.7	Strange Nucleon Form Factors	145
7.7.1	Indirect Determination of the Strange Form Factors	148
7.7.2	Strange Form Factors at $Q^2 > 0$	151
7.7.3	Strange Magnetic Moment	154
7.8	Summary and Discussion	157
	References	158
8	Summary and Outlook	161
	Appendix A: Formal Details of Heavy Mass Techniques	165
	Appendix B: Definitions and Identities	169
	Appendix C: Derivations for Chapter 3	171
	Appendix D: Tables of Chiral Coefficients	173
	Appendix E: Deep Inelastic Scattering and the Operator Product Expansion	187
	Appendix F: Chiral Extrapolation Formulae for Moments of PDFs	193
	Appendix G: Lattice Simulation Results for the Electromagnetic Form Factors	197
	Appendix H: Additional Results for Chapter 7	207

Strangeness and Charge Symmetry Violation in Nucleon
Structure

Shanahan, P.E.

2016, XV, 213 p. 58 illus., 19 illus. in color., Hardcover

ISBN: 978-3-319-31437-2
