Part I Convex Analysis

1	Convex Sets	3
1.1	Affine Sets	3
1.2	Convex Sets	5
1.3	Relative Interior and Closure	7
1.4	Convex Hull	12
1.5	Separation Theorems	16
1.6	Geometric Structure	19
1.6.1	Supporting Hyperplane	19
1.6.2	Face and Extreme Point	21
1.7	Representation of Convex Sets	23
1.8	Polars of Convex Sets	25
1.9	Polyhedral Convex Sets	27
1.9.1	Facets of a Polyhedron	28
1.9.2	Vertices and Edges of a Polyhedron	29
1.9.3	Polar of a Polyhedron	31
1.9.4	Representation of Polyhedrons	32
1.10	Systems of Convex Sets	34
1.11	Exercises	36
2	Convex Functions	39
2.1	Definition and Basic Properties	39
2.2	Operations That Preserve Convexity	43
2.3	Lower Semi-Continuity	47
2.4	Lipschitz Continuity	51
2.5	Convex Inequalities	52
2.6	Approximation by Affine Functions	56
2.7	Subdifferential	58
2.8	Subdifferential Calculus	62
2.9	Approximate Subdifferential	65
2.10	Conjugate Functions	67

2.11	Extremal Values of Convex Functions	69
2.11.1	Minimum.....	69
2.11.2	Maximum	70
2.12	Minimax and Saddle Points.....	72
2.12.1	Minimax	72
2.12.2	Saddle Point of a Function	75
2.13	Convex Optimization.....	76
2.13.1	Generalized Inequalities.....	76
2.13.2	Generalized Convex Optimization	78
2.13.3	Conic Programming	80
2.14	Semidefinite Programming	81
2.14.1	The SDP Cone	81
2.14.2	Linear Matrix Inequality	83
2.14.3	SDP Programming	84
2.15	Exercises.....	84
3	Fixed Point and Equilibrium	87
3.1	Approximate Minimum and Variational Principle.....	87
3.2	Contraction Principle.....	89
3.3	Fixed Point and Equilibrium.....	91
3.3.1	The KKM Lemma	91
3.3.2	General Equilibrium Theorem	93
3.3.3	Equivalent Minimax Theorem	96
3.3.4	Ky Fan Inequality.....	97
3.3.5	Kakutani Fixed Point	98
3.3.6	Equilibrium in Non-cooperative Games	98
3.3.7	Variational Inequalities	99
3.4	Exercises.....	101
4	DC Functions and DC Sets	103
4.1	DC Functions	103
4.2	Universality of DC Functions.....	105
4.3	DC Representation of Basic Composite Functions	107
4.4	DC Representation of Separable Functions	110
4.5	DC Representation of Polynomials.....	112
4.6	DC Sets	113
4.7	Convex Minorants of a DC Function	117
4.8	The Minimum of a DC Function	120
4.9	Exercises.....	122
 Part II Global Optimization		
5	Motivation and Overview	127
5.1	Global vs. Local Optimum.....	127
5.2	Multiextremality in the Real World	129

5.3	Basic Classes of Nonconvex Problems	132
5.3.1	DC Optimization	133
5.3.2	Monotonic Optimization	135
5.4	General Nonconvex Structure	135
5.5	Global Optimality Criteria	136
5.6	DC Inclusion Associated with a Feasible Solution	139
5.7	Approximate Solution	140
5.8	When is Global Optimization Motivated?	142
5.9	Exercises	147
6	General Methods	151
6.1	Successive Partitioning	151
6.1.1	Simplicial Subdivision	151
6.1.2	Conical Subdivision	155
6.1.3	Rectangular Subdivision	156
6.2	Branch and Bound	158
6.2.1	Prototype BB Algorithm	158
6.2.2	Advantage of a Nice Feasible Set	160
6.3	Outer Approximation	161
6.3.1	Prototype OA Procedure	162
6.4	Exercises	164
7	DC Optimization Problems	167
7.1	Concave Minimization Under Linear Constraints	167
7.1.1	Concavity Cuts	169
7.1.2	Canonical Cone	172
7.1.3	Procedure DC	173
7.1.4	ω -Bisection	178
7.1.5	Branch and Bound	180
7.1.6	Rectangular Algorithms	182
7.2	Concave Minimization Under Convex Constraints	184
7.2.1	Simple Outer Approximation	185
7.2.2	Combined Algorithm	187
7.3	Reverse Convex Programming	189
7.3.1	General Properties	190
7.3.2	Solution Methods	194
7.4	Canonical DC Programming	198
7.4.1	Simple Outer Approximation	201
7.4.2	Combined Algorithm	203
7.5	Robust Approach	204
7.5.1	Successive Incumbent Transcending	207
7.5.2	The SIT Algorithm for DC Optimization	208
7.5.3	Equality Constraints	211
7.5.4	Illustrative Examples	212
7.5.5	Concluding Remark	213

7.6	DC Optimization in Design Calculations	213
7.6.1	DC Reformulation	214
7.6.2	Solution Method	215
7.7	DC Optimization in Location and Distance Geometry	218
7.7.1	Generalized Weber's Problem.....	218
7.7.2	Distance Geometry Problem	220
7.7.3	Continuous p -Center Problem	221
7.7.4	Distribution of Points on a Sphere	221
7.8	Clustering via dc Optimization	222
7.8.1	Clustering as a dc Optimization.....	223
7.9	Exercises	226
8	Special Methods	229
8.1	Polyhedral Annexation	229
8.1.1	Procedure DC	229
8.1.2	Polyhedral Annexation Method for (<i>BCP</i>)	233
8.1.3	Polyhedral Annexation Method for (<i>LRC</i>)	234
8.2	Partly Convex Problems.....	236
8.2.1	Computation of Lagrangian Bounds.....	244
8.2.2	Applications.....	247
8.3	Duality in Global Optimization.....	249
8.3.1	Quasiconjugate Function	250
8.3.2	Examples	253
8.3.3	Dual Problems of Global Optimization.....	255
8.4	Application	258
8.4.1	A Feasibility Problem with Resource Allocation Constraint.....	259
8.4.2	Problems with Multiple Resources Allocation	261
8.4.3	Optimization Under Resources Allocation Constraints...	264
8.5	Noncanonical DC Problems	268
8.6	Continuous Optimization Problems	271
8.6.1	Outer Approximation Algorithm.....	275
8.6.2	Combined OA/BB Algorithm	278
8.7	Exercises	279
9	Parametric Decomposition	283
9.1	Functions Monotonic w.r.t. a Convex Cone	283
9.2	Decomposition by Projection	286
9.2.1	Outer Approximation.....	288
9.2.2	Branch and Bound	289
9.3	Decomposition by Polyhedral Annexation.....	292
9.4	The Parametric Programming Approach	294
9.5	Linear Multiplicative Programming	298
9.5.1	Parametric Objective Simplex Method	300
9.5.2	Parametric Right-Hand Side Method	302
9.5.3	Parametric Combined Method	303

9.6	Convex Constraints	305
9.6.1	Branch and Bound	306
9.6.2	Polyhedral Annexation	306
9.6.3	Reduction to Quasiconcave Minimization	308
9.7	Reverse Convex Constraints	313
9.7.1	Decomposition by Projection	314
9.7.2	Outer Approximation	314
9.7.3	Branch and Bound	316
9.7.4	Decomposition by Polyhedral Annexation	317
9.8	Network Constraints	319
9.8.1	Outer Approximation	320
9.8.2	Branch and Bound Method	321
9.9	Some Polynomial-Time Solvable Problems	326
9.9.1	The Special Concave Program $CPL(1)$	326
9.10	Applications	328
9.10.1	Problem $PTP(2)$	328
9.10.2	Problem $FP(1)$	329
9.10.3	Strong Polynomial Solvability of $PTP(r)$	330
9.11	Exercises	333
10	Nonconvex Quadratic Programming	337
10.1	Some Basic Properties of Quadratic Functions	337
10.2	The S-Lemma	339
10.3	Single Constraint Quadratic Optimization	346
10.4	Quadratic Problems with Linear Constraints	355
10.4.1	Concave Quadratic Programming	355
10.4.2	Biconvex and Convex-Concave Programming	358
10.4.3	Indefinite Quadratic Programs	361
10.5	Quadratic Problems with Quadratic Constraints	363
10.5.1	Linear and Convex Relaxation	364
10.5.2	Lagrangian Relaxation	377
10.5.3	Application	382
10.6	Exercises	388
11	Monotonic Optimization	391
11.1	Basic Concepts	391
11.1.1	Increasing Functions, Normal Sets, and Polyblocks	391
11.1.2	DM Functions and DM Constraints	395
11.1.3	Canonical Monotonic Optimization Problem	397
11.2	The Polyblock Algorithm	399
11.2.1	Valid Reduction	399
11.2.2	Generating the New Polyblock	402
11.2.3	Polyblock Algorithm	403
11.3	Successive Incumbent Transcending Algorithm	405
11.3.1	Essential Optimal Solution	406
11.3.2	Successive Incumbent Transcending Strategy	407
11.4	Discrete Monotonic Optimization	413

11.5	Problems with Hidden Monotonicity	417
11.5.1	Generalized Linear Fractional Programming	417
11.5.2	Problems with Hidden Monotonicity in Constraints	422
11.6	Applications	424
11.6.1	Reliability and Risk Management	424
11.6.2	Power Control in Wireless Communication Networks ...	425
11.6.3	Sensor Cover Energy Problem	426
11.6.4	Discrete Location	429
11.7	Exercises	433
12	Polynomial Optimization	435
12.1	The Problem	435
12.2	Linear and Convex Relaxation Approaches	436
12.2.1	The RLT Relaxation Method	436
12.2.2	The SDP Relaxation Method	439
12.3	Monotonic Optimization Approach	441
12.3.1	Monotonic Reformulation	442
12.3.2	Essential Optimal Solution	443
12.3.3	Solving the Master Problem	445
12.3.4	Equality Constraints	450
12.3.5	Discrete Polynomial Optimization	450
12.3.6	Signomial Programming	451
12.4	An Illustrative Example	451
12.5	Exercises	452
13	Optimization Under Equilibrium Constraints	453
13.1	Problem Formulation	453
13.2	Bilevel Programming	455
13.2.1	Conversion to Monotonic Optimization	457
13.2.2	Solution Method	459
13.2.3	Cases When the Dimension Can Be Reduced	463
13.2.4	Specialization to (LBP)	465
13.2.5	Illustrative Examples	467
13.3	Optimization Over the Efficient Set	468
13.3.1	Monotonic Optimization Reformulation	469
13.3.2	Solution Method for (OWE)	469
13.3.3	Solution Method for (OE)	474
13.3.4	Illustrative Examples	478
13.4	Equilibrium Problem	479
13.4.1	Variational Inequality	480
13.5	Optimization with Variational Inequality Constraint	483
13.6	Exercises	486
	References	489
