Contents

1 The Whats and Wherefores of Physics 1
1.1 The Beginning 1
1.2 What Is Physics? 2
1.3 Classical and Modern Physics 5
1.4 Why Do We Need Physics?. 8
1.5 Beauty and Symmetries. 9
References 9

2 Dramatis Personae (The Actors) 11
2.1 Definitions. 11
2.2 The Laws of Physics 15
2.3 The Variables of Mechanics 16
2.4 Conservation Laws. 17
2.5 Work and Energy. 18
2.6 Taylor Expansions 20
References 23

3 Is Physics an Exact Science? 25
3.1 Beginnings 25
3.2 Higher, Faster, Heavier, but by How Much? 26
3.3 Accuracy in Scientific Measurement 29
3.4 Measurement of Length in Astronomy 32
3.5 The Path to Understanding 34
3.6 Caveat Emptor! 36
References 38

4 Newton and Beyond 39
4.1 It's All Been Done! 39
4.2 Newton Stands on the Shoulders of Giants 40
4.3 Newton's Law of Gravity 43
4.4 Let There Be Light. 44
4.5 Geometrical Optics: The Corpuscular Theory of Light 45

4.6 Physical Optics: The Wave Theory of Light 47
4.7 Beyond Newton—Analytical Mechanics 49
4.8 The Method of Lagrange 50
4.9 Hamilton's Approach 53
References 54

5 Statistical Mechanics and Thermodynamics 55
5.1 Many Bodies Make Light Work 55
5.2 Kinetic Energy of Gas Molecules 57
5.3 Entropy and the Laws of Thermodynamics 58
Reference 62

6 Electromagnetism and Cracks in the Edifice of Classical Physics 63
6.1 Electricity and Magnetism 63
6.2 Maxwell Brings It Together 65
6.3 The Beginnings of Doubts 69
6.4 Particles or Waves 72

7 Relativity 77
7.1 A Bit of History 77
7.2 A Clerk in the Patent Office of Bern 81
7.3 Paradoxes 83
7.4 The Most Famous Formula of Physics 88
7.5 General Relativity 91
7.6 Sounds from the Depths: Gravitational Waves 95
References 99

8 Quantum Mechanics 101
8.1 A Disconcerting New Physics 101
8.2 Quantization of Light 102
8.3 Quantization of Matter 103
8.4 Wave Functions 105
8.5 Quantum Field Theory 107
8.6 The Uncertainty Principle 108
8.7 Superluminal Phase Waves 110
8.8 Collapse of the Wave Function and Multiple Universes 110
8.9 Entanglement and Superluminal Correlations 112
8.9.1 Macroscopic and Microscopic 113
8.10 QM and Cats 114
References 115

9 Atomic and Nuclear Physics 117
9.1 Early Days 117
9.2 Atomic Models 119
9.3 The Bohr-Rutherford Model of the Atom 121

9.4 The Quantum Mechanical Picture . . . 123
9.5 Inside the Nucleus . . . 125
9.6 Nuclear Decay . . . 127
9.7 Nuclear Synthesis . . . 129
9.8 Nuclear Forces . . . 130
9.9 Nuclear Models . . . 132

10 Fields and Particles . . . 137
10.1 Once Upon a Time . . . 137
10.2 The Particle Zoo . . . 139
10.3 The Standard Model . . . 140
10.4 Leptons . . . 140
10.5 Hadrons . . . 141
10.6 Bosons . . . 143
10.7 The Role of Symmetries . . . 144
10.8 Gauge Symmetries and the Fundamental Interactions . . . 147
10.9 The Problem of the Mass and the Higgs Boson . . . 149
10.10 What About Gravitons? . . . 149
10.11 Outstanding Issues . . . 150
10.11.1 Antimatter . . . 150
10.11.2 Supersymmetry . . . 150
10.11.3 Strings . . . 151
10.11.4 Ptolemy and Quantum Field Theory . . . 151

11 Cosmology . . . 153
11.1 The Time of Myths: Cosmogonies and Cosmologies . . . 153
11.2 Ancient Rational Cosmology . . . 154
11.3 Is the Universe Infinite, Homogeneous and Eternal? . . . 155
11.4 Relativistic Cosmology . . . 157
11.5 The Universe Expands, but Are We Really Sure? . . . 159
11.6 The Cosmic Microwave Background . . . 164
11.7 The Standard Universe Before 1998 . . . 167
11.8 Old and New Problems . . . 170
11.9 The Missing Mass . . . 170
11.10 The Foamy Distribution of Galaxies . . . 171
11.11 The Accelerated Expansion . . . 172
11.12 The Flatness of Space . . . 173
11.13 The Concordance Model of the Universe . . . 174
11.14 Alternative Scenarios . . . 176
Reference . . . 177

12 Complexity and Universality . . . 179
12.1 Simplicity and Complexity . . . 179
12.2 Complexity Theory . . . 181
12.3 On the Edge of Chaos . . . 184
12.4 Fractality . . . 185

12.5 An Epistemological Conjecture 186
12.6 Phenomenological Universalities (PUNs) 187
12.7 The Universality of Growth 190
References 192

13 Conclusions and Philosophical Implications 195
13.1 Introduction 195
13.2 Anthropic Principle 196
13.3 Variability of the Physical Constants 198
13.4 Determinism Versus Free Will 200
13.5 Entanglement Revisited 201
13.6 Reality and the Role of the Observer 204
13.7 What Do We Really Know About the Universe? 206
13.8 Philosophical Implications of Relativity 207
13.9 Philosophical Implications of Quantum Mechanics 208
13.10 Final Conclusions 209
References 210

Physics: The Ultimate Adventure

Barrett, R.; Delsanto, P.P.; Tartaglia, A.

2016, XVI, 218 p. 39 illus., 25 illus. in color., Hardcover
ISBN: 978-3-319-31690-1
