1	Nanostructured Materials for High Efficiency Perovskite Solar Cells.	1
	Meidan Ye, Xueqin Liu, James Iocozzia, Xiangyang Liu and Zhiqun Lin	
1.1	Introduction.	1
1.2	Nanostructured Scaffold Layers in PSCs	7
1.2.1	Nanostructured TiO ₂ Layers	7
1.2.2	Nanostructured Al ₂ O ₃ Layers.	19
1.2.3	Nanostructured ZnO Layers.	19
1.2.4	Nanostructured NiO Layers	21
1.2.5	Nanostructured Carbon Materials	22
1.2.6	Other Nanostructured Layers	25
1.3	Summary and Outlook	27
	References	27
2	Dielectric Nanomaterials for Silicon Solar Cells.	41
	Ingo Dirnstorfer and Thomas Mikolajick	
2.1	Dielectric Nanomaterials in Today's and Future Silicon Solar Cells	42
2.1.1	Epitaxial Si Foil-Based Solar Cell	43
2.1.2	Heterojunction Solar Cell with Dielectric Front Side Layer	44
2.1.3	Solar Cell with Symmetrical Passivation	44
2.1.4	Solar Cell with Carrier Selective Contacts.	45
2.1.5	Up-Converter Solar Cell	45
2.2	Theory of Surface Recombination and Surface Passivation	46
2.2.1	Surface Recombination Model	46
2.2.2	Dielectric Charges and Near Surface Recombination.	47
2.2.3	Surface Passivation	51

2.3	Deposition Methods	61
2.3.1	Plasma Enhanced Chemical Vapor Deposition	61
2.3.2	Atomic Layer Deposition	63
2.3.3	Alternative Deposition Methods	65
2.3.4	Low-Thermal Budget Processing	65
2.4	Dielectric Multi-oxide Nanolaminates	68
2.4.1	Zero-Fixed-Charge Passivation Layers	68
2.4.2	Carrier Selective Contacts	70
2.5	Dielectric Materials and Light Management	74
2.5.1	Dielectric Layers for Surface Reflection Control	74
2.5.2	Concepts for Light Trapping	76
2.5.3	Spectral Conversion of Light	77
2.6	Conclusions and Outlook	81
	References	82
3	Nanostructured Cathode Buffer Layers for Inverted Polymer Solar Cells	95
	Zhiqiang Liang and Guozhong Cao	
3.1	Introduction	96
3.2	Polymer Solar Cells	97
3.2.1	Inverted PSCs	98
3.2.2	Nanostructured ZnO Cathode Buffer Layers for Inverted PSCs	101
3.3	Fabrication of Nanostructured ZnO Films for Inverted PSCs	103
3.3.1	Sol-Gel Processing	103
3.3.2	ZnO CBLs Derived from Pre-fabricated ZnO Nanoparticles	107
3.3.3	Atomic Layer Deposition	109
3.4	The Impacts of ZnO CBLs on the Performance of Inverted PSCs	111
3.4.1	The Impacts of the Morphology of ZnO CBLs on the Performance of Inverted PSCs	111
3.4.2	The Effects of the Thickness of ZnO CBLs on the Performance of Inverted PSCs	115
3.5	Doping of ZnO CBLs in Inverted Polymer Solar Cells	117
3.5.1	Metal Doped ZnO Nano-films	117
3.5.2	Fullerene Derivatives Doped ZnO Nano-films	121
3.6	One-Dimensional ZnO Nanostructures for Inverted PSCs	122
3.7	Surface Modification of ZnO CBLs	126
3.7.1	UV Illumination Treatment of ZnO CBLs	127
3.7.2	Fullerene-Based Interlayer Modification of ZnO CBLs	128
3.7.3	Non-fullerene Based Interlayer Modification of ZnO CBLs	131

3.8	ZnO-Based Nanocomposites CBLs.	137
3.9	Conclusion and Outlook	144
	References	145
4	Nanomaterials for Stretchable Energy Storage and Conversion Devices	159
	Keyu Xie and Bingqing Wei	
4.1	Introduction.	159
4.2	Carbon Materials	162
4.2.1	Carbon Nanotubes	162
4.2.2	Graphene	167
4.2.3	CNT/Graphene Hybrid	170
4.2.4	Carbon Fiber	172
4.2.5	Carbon Grease.	173
4.3	Conjugated Polymer.	173
4.4	Metal Oxides.	179
4.5	Lithium Metal Oxides.	181
4.6	Elemental and Compound Semiconductors	184
4.7	Metals	186
4.8	Summary and Outlook	187
	References	188
5	Piezoelectric Nanomaterials for Energy Harvesting	193
	Kory Jenkins and Rusen Yang	
5.1	Introduction to Piezoelectric Nanomaterials	193
5.1.1	Piezoelectricity	194
5.2	Properties and Synthesis of Piezoelectric Nanomaterials	194
5.2.1	Zinc Oxide	195
5.2.2	Molybdenum Disulfide	197
5.2.3	Diphenylalanine (FF) Peptide	200
5.3	Energy Harvesting with Piezoelectric Nanomaterials.	202
5.3.1	Energy Harvesting with Zinc Oxide	202
5.3.2	Energy Harvesting with Molybdenum Disulfide	207
5.4	Conclusions and Outlook	210
	References	211
6	Discotic Liquid Crystals for Self-organizing Photovoltaics	215
	Hari Krishna Bisoyi and Quan Li	
6.1	Introduction.	216
6.1.1	Organic Photovoltaic Solar Cells	216
6.1.2	Discotic Liquid Crystals	218
6.2	Discotic Liquid Crystals in Organic Photovoltaic Solar Cells	222
6.2.1	Liquid Crystalline Porphyrins in OPV	223
6.2.2	Liquid Crystalline Phthalocyanines in OPV	225
6.2.3	Liquid Crystalline Hexabenzocoronenes in OPV	229

6.2.4	Liquid Crystalline Perylenebisimides in OPV.	237
6.2.5	Liquid Crystalline Triphenylenes in OPV	238
6.2.6	Liquid Crystalline Decacycene in OPV	243
6.2.7	Other Liquid Crystalline Discotic Compounds in OPV.	245
6.3	Conclusions and Outlook	246
	References	247
7	Vertically-Aligned Carbon Nanotubes for Electrochemical Energy Conversion and Storage	253
	Feng Du, Quanbin Dai, Liming Dai, Qihong Zhang, Thomas Reitz and Levi Elston	
7.1	Introduction.	253
7.2	VA-CNTs for Efficient Energy Conversion and Storage	254
7.3	VA-CNTs for Energy Conversion	256
7.4	VA-CNTs for Energy Storage	258
7.5	Conclusions	265
	References	266
8	Graphene-Based Electrochemical Microsupercapacitors for Miniaturized Energy Storage Applications.	271
	Hao Yang and Wu Lu	
8.1	Introduction.	271
8.2	Supercapacitors	272
8.2.1	Electrode Materials.	274
8.2.2	Electrolytes	275
8.2.3	Solid Electrolyte	276
8.2.4	Performance Evaluation	277
8.3	Interdigital Microsupercapacitors	279
8.4	Graphene-Based Microsupercapacitors	282
8.5	Conclusion and Outlooks	288
	References	288
9	Incorporating Graphene into Fuel Cell Design	293
	Edward P. Randviir and Craig E. Banks	
9.1	It's All Gone Graphene	294
9.2	Barriers to Commercialisation of Graphene	295
9.3	Fuel Cells	297
9.4	Graphene Fuel Cells.	299
9.4.1	Pristine Graphene.	299
9.4.2	Laser-Induced Graphene	302
9.4.3	Reduced Graphene Oxide	304
9.4.4	N-Doped Graphene	307
9.5	Conclusions and Outlook	309
	References	310

10 Mesoporous Materials for Fuel Cells.	313
Jin Zhang and San Ping Jiang	
10.1 Introduction.	315
10.2 Mesoporous Materials in SOFCs	317
10.3 Mesoporous Polymer Based PEM	318
10.3.1 Mesoporous Nafion Membrane	319
10.3.2 Mesoporous Block Copolymers	321
10.4 Sulfonated Mesoporous Silica Base PEMs.	323
10.4.1 Sulfonated Mesoporous Silica Fillers for Nafion Membrane	324
10.4.2 Sulfonated Mesoporous Silica for Alternative Polymer	327
10.4.3 Sulfonation of Mesoporous Silica.	329
10.4.4 Pore Structure and Acidity of Mesoporous Silica	331
10.5 Non-sulfonated Mesoporous Silica for PEMs.	333
10.5.1 Imidazole	334
10.5.2 Triazole	335
10.5.3 Protic Ionic Liquids	336
10.5.4 Phosphoric Acid	336
10.5.5 Alternative Mesoporous Materials for PEM.	338
10.6 Mesoporous Silica Based Inorganic PEMs.	340
10.6.1 Synthesis of HPW/ <i>Meso</i> -Silica.	341
10.6.2 Conductivity and Cell Performance of HPW/ <i>Meso</i> -Silica Composite Membrane	344
10.6.3 Proton Diffusion Mechanism in the HPW/ <i>Meso</i> -Silica	349
10.6.4 HPW/ <i>Meso</i> -Silica Membrane Fabrication	350
10.7 Mesoporous Materials for the Electrode Materials in PEMFC	351
10.7.1 Mesoporous Carbon Supported Catalyst	352
10.7.2 Mesoporous Metal Oxide Based Catalyst	355
10.8 Conclusions	357
References	358
