

# Contents

<b>1</b>	<b>Basic Principles of ERP Research, Surprise, and Probability</b>	
	<b>Estimation</b>	1
1.1	Data Acquisition and Initial Analysis	1
1.2	Signal-to-Noise Ratio Estimation for Event-Related Potentials	6
1.3	Circularity in Data Analyses	8
1.4	Probabilities and Surprise	9
	1.4.1 Bayesian Updating	10
	1.4.2 Predictive Surprise	11
1.5	Probability Weighting Functions	12
<b>2</b>	<b>Introduction to Model Estimation and Selection Methods</b>	15
2.1	An Example Study	15
2.2	Classical Single-Level Models	16
	2.2.1 The Null and Informative Hypotheses	16
	2.2.2 The General Linear Model	17
2.3	Hierarchical Multiple-Level Models	19
	2.3.1 The First Level	19
	2.3.2 The Second Level	20
	2.3.3 The Third Level	20
2.4	Model Estimation and Selection	22
	2.4.1 Collapsing and Augmenting the Hierarchical Model	23
	2.4.2 Model Parameter Optimization and Likelihood Calculation	25
	2.4.3 Model Selection Using Bayes Factors and Posterior Model Probabilities	27
	2.4.4 Group Studies	28
2.5	A Transfer Example Experiment—Setup	29
	2.5.1 Signal-to-Noise Ratio Simulation	31
	2.5.2 Synthetic Data and Experimental Conditions	32
	2.5.3 The Model Space	34

2.6	A Transfer Example Experiment—Results . . . . .	35
2.6.1	A Single Subject . . . . .	36
2.6.2	Multiple Subjects . . . . .	38
2.7	Evaluation Summary . . . . .	40
<b>3</b>	<b>A New Theory of Trial-by-Trial P300 Amplitude Fluctuations. . . . .</b>	<b>41</b>
3.1	Overview . . . . .	41
3.2	Participants, Experimental Design, Data Acquisition, and Data Analysis . . . . .	44
3.3	State-of-the-Art Observer Models and Surprise . . . . .	45
3.3.1	Approach by Squires et al. (SQU) . . . . .	45
3.3.2	Approach by Mars et al. (MAR) . . . . .	47
3.3.3	Approach by Ostwald et al. (OST) . . . . .	48
3.3.4	Surprise Based on the SQU, MAR, and OST Models . . . . .	49
3.4	The Digital Filtering Model (DIF) . . . . .	50
3.4.1	Short-Term Memory . . . . .	51
3.4.2	Long-Term Memory . . . . .	52
3.4.3	Alternation Expectation . . . . .	54
3.4.4	Explanatory Notes . . . . .	54
3.4.5	Surprise Based on the DIF Model . . . . .	55
3.4.6	DIF Model Parameter Training . . . . .	55
3.5	Specification of the Design Matrices for Model Estimation and Selection in the Oddball Task . . . . .	56
3.6	Results . . . . .	58
3.6.1	Conventional ERP Analyses . . . . .	58
3.6.2	Model-Based Trial-by-Trial Analyses . . . . .	61
3.7	Summary and Discussion . . . . .	66
<b>4</b>	<b>Bayesian Inference and the Urn-Ball Task . . . . .</b>	<b>71</b>
4.1	Overview . . . . .	71
4.2	Participants, Experimental Design, Data Acquisition, and Data Analysis . . . . .	73
4.3	The Bayesian Observer Model . . . . .	77
4.3.1	Bayes' Theorem and the Urn-Ball Task . . . . .	77
4.3.2	The Belief Distribution (BEL) . . . . .	79
4.3.3	The Prediction Distribution (PRE) . . . . .	80
4.3.4	Surprise Based on the Bayesian Observer Model . . . . .	80
4.3.5	Summary and Visualization of Bayesian Inference . . . . .	81
4.4	Incorporating Probability Weighting Functions into the Bayesian Observer Model . . . . .	83
4.4.1	Probability Weighting of the Inference Input (BEL <sub>SI</sub> and PRE <sub>SI</sub> ) . . . . .	83
4.4.2	Probability Weighting of the Inference Output (BEL <sub>SO</sub> and PRE <sub>SO</sub> ) . . . . .	84
4.4.3	Weighting Parameter Optimization . . . . .	85

- 4.5 The DIF Model in the Urn-Ball Task . . . . . 87
  - 4.5.1 The Objective Initial Prior ( $DIF_{OP}$ ) . . . . . 88
  - 4.5.2 The Initial Prior Using Weighting Functions ( $DIF_{SP}$ ) . . . . . 88
- 4.6 Specification of the Design Matrices for Model Estimation and Selection in the Urn-Ball Task . . . . . 89
- 4.7 Results . . . . . 90
  - 4.7.1 Conventional ERP Analyses . . . . . 90
  - 4.7.2 Model-Based Trial-by-Trial Analyses . . . . . 94
- 4.8 Summary and Discussion . . . . . 106
- 5 Summary and Outlook . . . . . 111**
- Appendix . . . . . 115**
- Bibliography . . . . . 119**

Computational Modeling of Neural Activities for  
Statistical Inference

Kolossa, A.

2016, XXIV, 127 p. 42 illus., 20 illus. in color., Hardcover

ISBN: 978-3-319-32284-1
