

Contents

1	Sets, Orders, Relations and Measures	1
1.1	Sets and Orders	2
1.2	Convergence and Summability in \mathbb{R}	8
1.3	Maps and Multimaps (Relations)	12
1.4	Measurable Spaces	16
1.5	Measures	24
1.6	Completion of a Measure	33
1.7	Lebesgue and Stieltjes Measures	36
1.8	* Product Measures	40
1.9	* Regular Measures on Metric Spaces	46
2	Encounters With Limits	51
2.1	Convergences	52
2.2	Topologies	55
2.2.1	General Facts About Topologies	55
2.2.2	Connectedness	60
2.2.3	Lower Semicontinuity	64
2.2.4	Compactness	69
2.3	Metric Spaces	76
2.3.1	General Facts About Metric Spaces	77
2.3.2	Complete Metric Spaces	85
2.3.3	Application to Ordinary Differential Equations	91
2.3.4	Compact Metric Spaces	93
3	Elements of Functional Analysis	97
3.1	Normed Spaces	98
3.1.1	General Properties of Normed Spaces	98
3.1.2	Continuity of Linear and Multilinear Maps	101
3.1.3	Finite Dimensional Normed Spaces	105
3.1.4	Series and Summable Families	107
3.1.5	Spaces of Continuous Functions	112

3.2	Topological Vector Spaces. Weak Topologies	117
3.3	Separation and Extension. Polarity	120
3.3.1	Convex Sets and Convex Functions	121
3.3.2	Separation and Extension Theorems	125
3.3.3	Polarity and Orthogonality	134
3.4	Couplings and Reflexivity	139
3.4.1	Couplings	139
3.4.2	Reflexivity and Weak Topologies	140
3.4.3	Uniform Convexity	145
3.4.4	Separability	148
3.5	Some Key Results of Functional Analysis	151
3.5.1	Some Classical Theorems	151
3.5.2	Densely Defined Operators and Transposition	160
3.5.3	The Spectrum of a Linear Operator	166
3.5.4	Compact Operators	170
3.6	Elementary Integration Theory	175
3.6.1	Regulated Functions and Their Integrals	175
3.6.2	*Functions of Bounded Variation and Integration	178
3.6.3	*Application: The Dual of $C(T)$	183
4	Hilbert Spaces	185
4.1	Hermitian Forms	185
4.2	Best Approximation	189
4.3	Orthogonal Families	192
4.4	The Dual of a Hilbert Space	196
4.5	Fourier Series	200
4.5.1	Application: The Dirichlet Problem for the Disk	204
4.5.2	Application: Dido's Problem	206
4.6	Orthogonal Polynomials	209
4.7	Elementary Spectral Theory for Self-Adjoint Operators	211
5	The Power of Differential Calculus	219
5.1	Differentiation of One-Variable Functions	221
5.1.1	Derivatives of One-Variable Functions	221
5.1.2	The Mean Value Theorem	224
5.2	Primitives and Integrals	227
5.3	Directional Differential Calculus	229
5.4	Classical Differential Calculus	236
5.4.1	The Main Concepts and Results of Differential Calculus	237
5.4.2	Higher Order Derivatives	248
5.4.3	Taylor's Formulas	252
5.4.4	Differentiable Partitions of Unity	254
5.5	Solving Equations and Inverting Maps	256
5.5.1	Newton's Method	256
5.5.2	The Inverse Mapping Theorem	259

5.5.3	The Implicit Function Theorem	265
5.5.4	Geometric Applications	270
5.5.5	*The Eikonal Equation	276
5.5.6	*Critical Points	278
5.5.7	*The Method of Characteristics	282
5.6	Applications to Optimization	286
5.6.1	Unconstrained Minimization	286
5.6.2	Normal Cones, Tangent Cones, and Constraints	288
5.6.3	Calculus of Tangent and Normal Cones	294
5.6.4	Multiplier Rules	297
5.7	Introduction to the Calculus of Variations	299
5.7.1	The One-Variable Case	300
5.7.2	Some Examples	307
5.7.3	The Legendre Transform	310
5.7.4	The Hamiltonian Formalism	312
5.7.5	The Several Variables Case	314
6	A Touch of Convex Analysis	317
6.1	Continuity Properties of Convex Functions	321
6.2	Differentiability Properties of Convex Functions	326
6.2.1	Derivatives of Convex Functions	326
6.2.2	Subdifferentials of Convex Functions	329
6.2.3	Differentiability of Convex Functions	335
6.2.4	Elementary Calculus Rules for Subdifferentials	338
6.2.5	Application to Optimality Conditions	342
6.3	The Legendre-Fenchel Transform and Its Applications	347
6.3.1	The Legendre-Fenchel Transform	348
6.3.2	A Brief Account of Convex Duality Theories	353
6.3.3	Duality and Subdifferentiability Results	361
6.3.4	The Interplay Between a Function and Its Conjugate	367
6.3.5	Conditioning and Well-Posedness	374
6.4	*Applications to the Geometry of Normed Spaces	378
6.5*	Regularization of Convex Functions	392
7	Integration	399
7.1	Step Functions and μ -Measurable Functions	400
7.2	Integrable Functions and Their Integrals	402
7.3	Approximation of Integrable Functions	412
7.4	Convergence Results	415
7.5	Integrals Depending on a Parameter	421
7.6	Integration on a Product	423
7.7	Change of Variables	432
7.8	Measures on Spheres	438

8	Differentiation and Integration	441
8.1	Vectorial Measures	441
8.2	Decomposition and Differentiation of Measures	447
8.2.1	Decompositions of Measures	447
8.2.2	Differentiation of Measures	451
8.3	Differentiation of Measures on \mathbb{R}^d	456
8.4	Derivatives of One-Variable Functions	463
8.5	Lebesgue $L_p(S, E)$ Spaces	471
8.5.1	Basic Facts About Lebesgue Spaces	472
8.5.2	Nemytskii Maps	479
8.6	Duality and Reflexivity of Lebesgue Spaces	483
8.7	Compactness in Lebesgue Spaces	490
8.8	Convolution and Regularization	496
8.9	Some Useful Transforms	503
8.9.1	The Fourier Transform	504
8.9.2	Introduction to the Radon Transform	509
9	Partial Differential Equations	519
9.1	Definition and Basic Properties of Sobolev Spaces	520
9.1.1	Test Functions and Weak Derivatives	521
9.1.2	Definition and First Properties of Sobolev Spaces	525
9.1.3	Calculus Rules in Sobolev Spaces	529
9.1.4	Extension	532
9.1.5	Traces	533
9.2	Embedding Results	541
9.3	Elliptic Problems	545
9.3.1	Ellipticity	546
9.3.2	Energy Estimates and Existence Results	547
9.3.3	Regularity of Solutions	552
9.3.4	Maximum Principles	555
9.4	Nonlinear Problems	558
9.4.1	Transforming Equations	558
9.4.2	Using Potential Functions	562
9.4.3	Order Methods	565
9.4.4	Monotone Multimaps	568
9.4.5	Representation of Monotone Multimaps	574
9.4.6	Surjectivity of Maximally Monotone Multimaps	581
9.4.7	Sums of Maximally Monotone Multimaps	588
9.4.8	Variational Inequalities	591
10	Evolution Problems	597
10.1	Ordinary Differential Equations	598
10.1.1	Separation of Variables	599
10.1.2	Existence Results	601
10.1.3	Uniqueness and Globalization of Solutions	606
10.1.4	The Exponential Map	611
10.1.5	The Laplace Transform	614

10.2 Semigroups 617

10.2.1 Continuous Linear Semigroups and Their Generators 618

10.2.2 Characterization of Generators of Continuous Semigroups 622

10.2.3 * Dissipative and Accretive Multimaps..... 630

10.3 Parabolic Problems: The Heat Equation 640

10.4 Hyperbolic Problems: The Wave Equation 643

Appendix: The Brouwer’s Fixed Point Theorem 647
