

Contents

1	Introduction	1
1.1	Our Main Objective and a Guide Through the Book	1
1.2	The History of the Problem	3
1.2.1	Models for Elastic Solid Bodies	3
1.2.2	Models for Viscous Fluid Bodies	10
1.2.3	Models for Viscoelastic Bodies	12
	References	15
2	Linear Strain Theory	19
2.1	Pure Self-Gravity: Fundamental Relations	19
2.1.1	Equilibrium of Forces and Hooke’s Law	19
2.1.2	Solution in Spherical Coordinates	23
2.1.3	Numerical Evaluation	26
2.1.4	The Bimaterial Sphere	34
2.1.5	Body Force with Current Mass Density	37
2.2	Rotating Objects: Fundamental Relations	39
2.2.1	Kinematics and Dynamics of Self-Gravity and “Inertial Forces”	40
2.2.2	Explicit Forms for the Stresses and Displacements	43
2.2.3	Evaluation and Discussion of the Results	45
	References	48
3	Nonlinear Strain Theory	51
3.1	Nonlinear Self-Gravity: Current Configuration	52
3.1.1	Momentum Balance for Large Deformations	52
3.1.2	Nonlinear Stress–Strain Relations	56
3.1.3	The Field Equation	57
3.1.4	Dimensionless Field Equation and Boundary Conditions; Seth’s β -Approach	58
3.1.5	Numerics: General Remarks	60
3.1.6	Numerics I: NDSolve Command	61
3.1.7	Numerics II: Finite Difference Scheme	62

3.1.8	Numerics III: Finite Element Method	62
3.1.9	Numerics IV: Series Solution	63
3.1.10	Compilation and Critical Review of the Numerical Results	64
3.1.11	Uniqueness and Existence—A Pedestrian’s Approach . . .	68
3.1.12	Transition from Reference to Current State	70
3.1.13	Limit Mass of a Hookean Planet with Large Deformations	72
3.2	Nonlinear Self-Gravity: Reference Configuration	74
3.2.1	Momentum Balance for Large Deformations	74
3.2.2	Nonlinear Stress–Strain Relations	75
3.2.3	The Field Equation	77
3.2.4	Dimensionless Field Equation	78
3.2.5	Comparison with Results for the Current Configuration	78
	References	80
4	Fluid Models	83
4.1	Self-Gravity in Fluid Bodies—Fundamentals	83
4.1.1	A Historical Remark	83
4.1.2	The Field Equation for the Mass Density	84
4.2	The Incompressible Fluid	86
4.2.1	Solution for the Pressure Distribution	87
4.2.2	Evaluation and Discussion of the Solution	88
4.3	The Compressible Fluid	89
4.3.1	Rewriting the Current Mass Density	89
4.3.2	Thermal Equation of State	91
4.3.3	Dimensionless Equations	92
4.3.4	Numerical Evaluation and Discussion	92
	References	94
5	Miscellaneous Applications and Outlook	97
5.1	Multi-shell Self-Gravitating Objects	97
5.2	A Simple Viscoelastic Model for Self-Gravitating Objects	98
5.2.1	Equations Pertinent to the Viscoelastic Model	99
5.2.2	Solution in Dimensionless Form	100
5.2.3	Numerical Evaluation and Discussion of Results	102
5.3	Conclusions and Outlook	106
	References	106
	Appendix A: Laplace and Poisson Equation in Newtonian Gravity	109

The State of Deformation in Earthlike Self-Gravitating
Objects

Müller, W.H.; Weiss, W.

2016, XII, 111 p. 36 illus., 33 illus. in color., Softcover

ISBN: 978-3-319-32578-1
