1	Introduction	1
	Reference	8
2	Applications of Seismic Monitoring in Combating Rock Burst Hazard	9
2.1	Early Monitoring Facilities of South Africa	10
2.2	Application of Seismic Data in Rock Mechanics Practice	13
2.2.1	Applications Relating to 1970–1980	13
2.2.2	Applications Relating to 1980–1990	16
2.3	Summary	23
	References	24
3	Seismic Parameters and Their Physical Meaning	31
3.1	Seismic Parameters Derived from Spectral Analysis	33
3.1.1	Seismic Moment	34
3.1.2	Seismic Energy	36
3.1.3	Source Dimensions	36
3.2	Stress Release Estimates	37
3.3	Magnitude Concept	38
3.4	Single Event Source Parameters	41
3.4.1	Recording Geometry and Seismic Source Parameters	44
3.5	Seismicity Versus Single Event	51
3.6	Summary	52
	References	59
4	Seismic Source Parameter Ranges	61
4.1	Seismic Energy	61
4.2	Seismic Moment	69
4.3	Seismic Energy Release Per Seismic Moment Ranges	73
4.4	Apparent Stress Ranges	74
4.5	Energy S Versus Energy P	75

4.6	Mine Induced Seismicity and Earthquakes	77
4.7	Summary	84
	References	85
5	Interpretation Methods of Mine Induced Seismicity	87
5.1	Space Distribution of Seismicity	90
5.2	Activity Rates	94
5.3	Cumulative Values	102
5.4	Energy Index Concept	110
5.4.1	Development of the Concept	110
5.4.2	Applications of the Energy Index Concept at Cave Mining Operations	112
5.5	Some Problem Areas	121
5.5.1	Activity Rates	121
5.5.2	Locations of Events	123
5.5.3	Dividing the Mine into Polygons	126
5.5.4	Creating Sub-Data Sets	128
5.5.5	Parameters Derived from Moment and Energy	132
5.6	Limitations of Seismic Data	135
5.7	Summary	139
	References	141
6	Palabora Seismic History	143
6.1	Palabora Seismic Network	147
6.2	Influence of the Network Upgrades on the Network Sensitivity	149
6.3	Quality of the Recorded Seismic Data	150
6.4	Achieved Objectives of Seismic Monitoring	153
6.4.1	Cave Monitoring at the Early Caving Stage	153
6.4.2	Cave Monitoring at the Later Caving Stages	157
6.4.3	Stress Distribution Around the Cave and Underground Excavations	161
6.4.4	Seismic Hazard Monitoring	162
6.5	General Description of Palabora Seismicity (Up to the End of 2013)	163
6.5.1	Seismic Energy Release Trends	173
6.5.2	Occurrence and Locations of Events Above Magnitude 1.0	176
6.6	Summary	177
	References	178
7	Palabora Caving Process as Evidenced by Induced Seismicity	181
7.1	Caving Process Time Periods	185
7.2	Caving Process Milestones	196
7.3	Palabora Seismic Response to the Caving Process	216

7.4	Comparison Between Initial and East Break Through	219
7.4.1	Energy Index and Seismicity Elevation Changes Associated with the Break Through	222
7.4.2	Seismic Energy Releases Associated with the Breaks Through	225
7.4.3	Seismic Deformations Associated with the Breaks Through	232
7.4.4	Percentages of Seismicity Taking Place Above the Mine.	236
7.4.5	Similarities and Differences Between the Initial and East Break Through	241
7.5	Production Rates and Seismicity	244
7.6	Notes Relating to the Energy Index Time History Shape.	253
7.7	Failure of the Open Pit North Wall	256
7.8	Summary	260
	References	262
8	Caving Process and Seismic Hazard	265
8.1	Seismic Risk Indicators.	265
8.1.1	Apparent Stress	270
8.1.2	Energy Index.	271
8.1.3	Energy Release by Small Size Events.	275
8.2	Seismic Hazard Estimation	279
8.2.1	Statistical Method	279
8.2.2	Non-statistical Methods of Seismic Hazard Evaluation.	283
8.2.3	Seismic Protocol	285
8.3	Medium and Short Term Seismic Hazard Assessments—Are They Possible?	288
8.4	Estimation of Maximum Possible Magnitude for Seismic Events of Mode Two and Three.	295
8.4.1	Introduction.	295
8.4.2	Discussion of Results	296
8.5	Conclusions	300
8.6	Summary	301
	References	303
9	Problems Related to Software Versions.	305
9.1	Conclusions	306
9.2	Analysis	307
9.3	Comments Regarding the Seismic Energy Release Rates Based on Palabora Experience with Software Version 9.2.1. . . .	320
9.4	Summary	325
	References	325

10	Seismic Preconditioning Below Lift 1 and Its Influence on the Cavability of Lift 2 Cave	327
10.1	Introduction.	327
10.2	Comparison of Seismicity Recorded Below with that Recorded Above the Mine.	329
10.3	Seismically Active Volume	332
10.3.1	Seismically Active Volumes Based on Six Months Seismic Data for the Whole Mine	332
10.3.2	Seismically Active Volume Based on Three Months Seismic Data for the Whole Mine	335
10.3.3	Comparison of Results Based on Six and Three Months Time Periods	336
10.4	Apparent Volume and Seismically Active Volume	337
10.4.1	Apparent Volume and Seismically Active Volume for the Whole Mine	337
10.4.2	Seismicity Recorded Above and Below the Mine	340
10.4.3	Seismically Active Volume Above the Mine	346
10.4.4	Seismically Active Volume Below the Mine	348
10.4.5	Comparison Between Apparent and Seismically Active Volumes Above and Below the Mine	351
10.5	Distributions of Seismic Energy and Moment Above and Below the Mine Foot Print	353
10.6	Conclusions	360
10.7	Summary	361
	References	363
11	Palabora Lift 2 Mine Seismic System	365
11.1	Introduction.	366
11.2	Seismic Catalogue Completeness and Seismic Sensor Configurations	367
11.3	Experience Based on Palabora Lift 1 Seismic System	369
11.3.1	Lift 1 Seismic Network Successes and Failures	370
11.4	Experience from Other Networks Monitoring the Caving Process	372
11.5	Seismic System Management Systems	374
