

Contents

1	Organo-Metal Lead Halide Perovskite Properties	1
1.1	Perovskite Crystal Structure	1
1.2	Perovskite Energy Level	2
1.3	Absorption Coefficient of Perovskite	3
1.4	Balance Charge Transport of Perovskite	3
	References	3
2	The Evolution of Perovskite Solar Cells Structures	5
2.1	Perovskite Solar Cells with Liquid Electrolyte	5
2.2	Perovskite Solar Cells with Solid-State Hole Conductor	5
2.3	Perovskite Solar Cells in Planar Configuration	7
	References	8
3	Hole Transport Material (HTM) Free Perovskite Solar Cell	9
3.1	Introduction	9
3.2	Mesoporous HTM-Free Perovskite Solar Cell	10
3.3	Planar HTM-Free Perovskite Solar Cell [14]	18
	References	23
4	Parameters Influencing the Deposition of Methylammonium Lead Halide Iodide in Hole Conductor Free Perovskite-Based Solar Cells	25
4.1	Introduction	25
4.2	Spin Velocity	25
4.3	Dipping Time	27
4.4	Annealing Temperature	28
4.5	Methylammonium Iodide Concentration	30
	References	32

5	Tuning the Optical Properties of Perovskite in HTM	
	Free Solar Cells	33
5.1	Halide (X-Site) Modifications [1].	33
5.2	Cation (A-Site) Modifications [7]	37
	References	43
6	High Voltage in Hole Conductor Free Organo Metal Halide	
	Perovskite Solar Cells	45
	References	50
7	Self-assembly of Perovskite for Fabrication of Semi-transparent	
	Perovskite Solar Cells	51
	References	55
8	Summary	57
