1	Introduction	1
1.1	Introduction	1
1.2	Motivation	3
1.3	Scope, Objectives, Methodology and Background of the Proposed Research Work	4
1.3.1	Scope of the Study	4
1.3.2	Background of the Proposed Research Work	6
1.3.3	Objectives and Methodology	7
	References	9
2	Service Life and Durability of Assemblies	13
2.1	Theoretical Foundations	13
2.2	Service Life of Buildings	14
2.2.1	Criteria that Influence the End of the Service Life of Buildings	16
2.3	Methodologies for Service Life Prediction	18
2.3.1	Deterministic Models	19
2.3.2	Stochastic Models	20
2.3.3	Engineering Models	21
2.4	Normative Framework for the Service Life Prediction of Buildings	22
2.5	Degradation Phenomena of Façade Claddings	24
2.5.1	Data Acquisition Methods to Establish Service Life Prediction Models	25
2.5.2	Systemic Analysis of the Façades Degradation Condition	26
2.5.3	Degradation of Façade Claddings	46
2.6	Characterization of the Samples Analysed	52
2.6.1	Natural Stone Claddings	54
2.6.2	Rendered Façades	55

2.6.3	Painted Surfaces	57
2.6.4	Ceramic Tiling Systems	57
2.7	Conclusion	59
	References	61
3	Deterministic Models	67
3.1	Simple Regression Analysis	67
3.1.1	Theoretical Foundations	67
3.1.2	Application to Façade Claddings.	71
3.2	Multiple Linear Regression Analysis	94
3.2.1	Theoretical Foundations	94
3.2.2	Application of Multiple Linear Regression to Façade Claddings.	103
3.2.3	Analysis of Causal Effects Between Explanatory Variables	117
3.2.4	Results and Discussion	129
3.3	Multiple Nonlinear Regression Analysis	135
3.3.1	Theoretical Foundations	135
3.3.2	Application of Multiple Linear Regression to Façade Claddings.	141
3.4	Conclusions	154
	References	155
4	Stochastic Models	163
4.1	Logistic Regression	163
4.1.1	Theoretical Foundations	163
4.1.2	Probabilistic Analysis of the Degradation Condition in Relation to the Cladding's Age	171
4.1.3	Probabilistic Analysis of Façades Reaching the End of Their Service Life	181
4.1.4	Conclusions	191
4.2	Markov Chains	192
4.2.1	Theoretical Foundations	192
4.2.2	Application of Markov Chain Models to Façade Claddings.	197
4.2.3	Conclusions	212
	References	213
5	Computational Models	219
5.1	Artificial Neural Networks	219
5.1.1	Theoretical Foundations	219
5.1.2	Application to Façade Claddings.	224
5.1.3	Conclusions	239

5.2	Fuzzy Logic	240
5.2.1	Theoretical Foundations	240
5.2.2	Application to Façade Claddings	245
5.2.3	Conclusions	257
	References	258
6	Factorial Models	263
6.1	Introduction	263
6.2	Classic Approach	264
6.2.1	Theoretical Foundations	264
6.2.2	Methodology	267
6.2.3	Application to Façade Claddings	272
6.3	Stochastic Approach	302
6.3.1	Theoretical Foundations	302
6.3.2	Application to Façade Claddings	304
6.4	Conclusions	320
