Part I High Energy Pulsed CO₂ Lasers

1 Carbon Dioxide Laser with an Output Energy of 3 kJ, Excited in Matched Regime	3
References	7
2 SSVD in Long Gaps Containing CO₂-N₂-He Mixtures	9
References	13
3 Carbon Dioxide Laser with a Variable Output Pulse Duration	15
References	18
4 Efficiency of Utilization of Certain Readily Ionized Substances for Discharge Stabilization in CO₂ Lasers	19
References	23
5 Electric Discharge CO₂ Laser with a Large Radiating Aperture	25
5.1 Introduction.	25
5.2 General Propositions	26
5.3 Experimental Part.	27
5.4 Experimental Results and Discussion	29
References	32
6 Formation of an SSVD with Intense Ultraviolet Irradiation of the Cathode Region	35
References	41
7 High-Energy Electric-Discharge CO₂ Laser with Easily Ionizable Substances Added to the Mixture	43
7.1 Introduction.	43
7.2 Apparatus	44
7.3 Volume Discharge Characteristics	44

7.4	Optimization of Laser Output Characteristics	46
7.5	Conclusions	48
	References	48
8	Formation of a Spatially Homogeneous Discharge in Large-Volume CO₂-N₂-He Gas Mixtures	49
	References	51
9	Stability of an SSVD in a CO₂-N₂-He Gas Mixture with Easily Ionizable Additives.	53
	References	56
10	Formation of an SSVD for the Pumping of CO₂ Lasers.	57
10.1	Introduction.	57
10.2	Experimental Setup	58
10.3	Model of Propagation of an Electron Flux.	60
10.4	Results of Experiments and Discussion.	63
10.5	Conclusions	70
	References	71
11	Mechanism of Formation of an SSVD Initiated by a Barrier Discharge Distributed on the Surface of a Cathode	73
	References	77
12	Formation of an SSVD for Pumping of Gas Lasers in Compact Electrode Systems	79
	References	81
13	Large-Aperture CO₂ Amplifier.	83
	References	85
14	Dynamic Profiling of an Electric Field in the Case of Formation of an SSVD Under Conditions of Strong Ionization of the Electrode Regions.	87
	References	90
15	Small-Signal Gain of CO₂ Lasers Pumped by an SSVD.	91
	References	94
16	Feasibility of Increasing the Interelectrode Distance in an SSVD by Filling the Discharge Gap with Electrons.	97
	References	100
17	Influence of Easily Ionizable Substances on the Stability of an SSVD in Working CO₂ Laser Mixtures	101
	References	106

18	Dynamics of Population of the $A^3\Sigma_u^+$ Nitrogen Metastable State in an SSVD of a Pulsed CO₂ Laser	107
	References	111
19	High-Energy Molecular Lasers Pumped by an SSVD	113
19.1	Introduction	113
19.2	Discharge Stability	114
19.3	Initial Electrone Concentration	119
19.4	Dynamic Profiling in the Discharge Gap	122
19.5	CO ₂ Lasers Pumped by the Discharge	127
19.6	Characteristics of an Active Medium and Scalability	127
19.7	N ₂ O Lasers	128
19.8	Conclusions	132
	References	132
20	N₂O Laser Pumped by an SSVD	135
	References	138
21	CO₂- and N₂O-Lasers with Preliminary Filling of the Gap by Electrons	139
21.1	Necessary Conditions for Preionization and Field Enhancement	140
21.2	Discharge Preionization and Ignition Model	141
21.3	Method of Solution and Rate Data	144
21.4	Discharge Ignition Phenomena	146
21.4.1	CO ₂ Lasers	146
21.4.2	N ₂ O Lasers	149
21.5	Discussion and Conclusions	151
	References	152
22	Modeling of Large-Aperture CO₂-Lasers	155
22.1	Excitation Waveform Requirements	156
22.1.1	Single-Pulse Waveforms	156
22.1.2	Double-Pulse Waveforms	157
22.1.3	Minimum Ignition Voltage	158
22.2	Coupled-Particle Kinetics-Equivalent Circuit Model	158
22.3	Pulsed Power Systems	161
22.4	Computational Results	162
22.4.1	Single-Pulse Excitation Without Quasi-DC Bias	162
22.4.2	Single-Pulse Excitation with Quasi-DC Bias	164
22.4.3	Double-Pulse Excitation	167
22.5	Conclusions	169
	References	170

Part II High Energy HF/DF Lasers

23 Non-chain High Radiation Energy Electric-Discharge HF(DF) Lasers.	173
References	177
24 SIVD in Nonchain HF Lasers Based on SF₆-Hydrocarbon Mixtures	179
24.1 Introduction.	179
24.2 Experimental Apparatus	180
24.3 Experimental Results	182
24.4 Discussion of the Results	191
24.5 Conclusions	194
References	194
25 Discharge Characteristics in a Nonchain HF(DF) Laser.	197
References	201
26 Ion-Ion Recombination in SF₆ and in SF₆-C₂H₆ Mixtures for High Values of E/N	203
26.1 Introduction.	203
26.2 Experimental	204
26.3 Results of Measurements	206
26.4 Discussion of Results	207
26.5 Conclusions	212
References	213
27 SSVD Instability of Nonchain HF(DF) Laser Mixture	215
27.1 Introduction.	215
27.2 Experimental Setup	216
27.3 Experimental Results	218
27.4 Results and Discussion	220
27.4.1 Nonlinear Mechanism of Ionization Development in Active Media of HF/DF Lasers 4.1.	220
27.4.2 Self-Organization of SSVD Plasma upon Laser Heating of SF ₆ -Based Mixtures	223
27.4.3 Mechanism of Evolution of Conducting Channels in SF ₆ and Its Mixtures.	224
27.5 Conclusions	224
References	225
28 Dynamics of a SIVD in Mixtures of Sulfur Hexafluoride with Hydrocarbons	227
28.1 Introduction.	227
28.2 Experimental Investigation	228
28.3 Conclusion	230
