Contents

1 Introduction 1
1.1 Beta Ensembles with Varying Weights 1
1.1.1 Local Fluctuations and Universality 3
1.1.2 Enumerative Geometry and N-fold Integrals 5
1.2 The Large-N Expansion of $\mathcal{Z}_N^{(\beta)}$ 6
1.2.1 Leading Order of $\mathcal{Z}_N^{(\beta)}$: The Equilibrium Measure and Large Deviations 6
1.2.2 Asymptotic Expansion of the Free Energy: From Selberg Integral to General Potentials 10
1.2.3 Asymptotic Expansion of the Correlators via Schwinger–Dyson Equations 12
1.2.4 The Asymptotic Expansion of the Free Energy up to $o(1)$ 23
1.3 Generalisations 24
1.4 β-Ensembles with Non-varying Weights 30
1.5 The Integrals Issued from the Method of Quantum Separation of Variables 32
1.5.1 The Quantum Separation of Variables for the Toda chain 32
1.5.2 Multiple Integral Representations 37
1.5.3 The Goal of the Book 39
1.6 Notations and Basic Definitions 43
References 47

2 Main Results and Strategy of Proof 53
2.1 A Baby Integral as a Motivation 53
2.2 The Model of Interest and the Assumptions 55
2.3 Asymptotic Expansion of $Z_N[V]$ at $\beta = 1$ 57

2.4 The N-dependent Equilibrium Measure and the Master Operator . . . 59
2.5 The Overall Strategy of the Proof . . . 64
References . . . 66

3 Asymptotic Expansion of $\ln Z_N[V]$—The Schwinger–Dyson Equation Approach . . . 69
3.1 A Priori Estimates for the Fluctuations Around $\mu_{\mathrm{eq}}^{(N)}$ . . . 69
3.2 The Schwinger–Dyson Equations . . . 82
3.3 Asymptotic Analysis of the Schwinger–Dyson Equations . . . 87
3.4 The Large-N Asymptotic Expansion of $\ln Z_N[V]$ up to $\mathrm{o}(1)$ . . . 96
Reference . . . 98

4 The Riemann–Hilbert Approach to the Inversion of $\mathcal{S}_N$ . . . 99
4.1 A Re-writing of the Problem . . . 99
4.1.1 A Vector Riemann–Hilbert Problem . . . 99
4.1.2 A Scalar Riemann–Hilbert Problem . . . 104
4.2 The Auxiliary 2×2 Matrix Riemann–Hilbert Problem for χ . . . 106
4.2.1 Formulation and Main Result . . . 106
4.2.2 Transformation $\chi \rightsquigarrow \Psi \rightsquigarrow \Pi$ and Solvability of the Riemann–Hilbert Problem . . . 107
4.2.3 Properties of the Solution χ . . . 110
4.3 The Inverse of the Operator $\mathcal{S}_N$ . . . 115
4.3.1 Solving $\mathscr{S}_{N;\gamma}[\varphi] = h$ for $h \in H_s([0\,;\overline{x}_N]), -1 < s < 0$ . . . 115
4.3.2 Local Behaviour of the Solution $\widetilde{\mathscr{W}}_{\vartheta}[h]$ at the Boundaries . . . 119
4.3.3 A Well-Behaved Inverse Operator of $\mathcal{S}_{N;\gamma}$ . . . 126
4.3.4 $\mathcal{W}_N$: The Inverse Operator of $\mathcal{S}_N$ . . . 129
References . . . 131

5 The Operators $\mathcal{W}_N$ and $\mathcal{U}_N^{-1}$ . . . 133
5.1 Local Behaviour of $\mathcal{W}_N[H](\xi)$ in ξ, uniformly in N . . . 133
5.1.1 An Appropriate Decomposition of $\mathcal{W}_N$ . . . 133
5.1.2 Local Approximants for $\mathcal{W}_N$ . . . 140
5.1.3 Large N Asymptotics of the Approximants of $\mathcal{W}_N$ . . . 146
5.2 The Operator $\mathcal{U}_N^{-1}$ . . . 153
5.2.1 An Integral Representation for $\mathcal{U}_N^{-1}$ . . . 153
5.2.2 Sharp Weighted Bounds for $\mathcal{U}_N^{-1}$ . . . 156

6 Asymptotic Analysis of Integrals . . . 165
6.1 Asymptotic Analysis of Single Integrals . . . 165
6.1.1 Asymptotic Analysis of the Constraint Functionals $\mathcal{X}_N[H]$ . . . 165
6.1.2 Asymptotic Analysis of Simple Integrals . . . 169

6.2 The Support of the Equilibrium Measure 174
6.3 Asymptotic Evaluation of the Double Integral 176
6.3.1 The Asymptotic Expansion Related to $\mathfrak{I}_{\mathrm{d};\mathrm{b}k}$ and $\mathfrak{I}_{\mathrm{d};R}$ 180
6.3.2 Estimation of the Remainder $\Delta_{[k]}\mathfrak{I}_{\mathrm{d}}[H, V]$ 183
6.3.3 Leading Asymptotics of the Double Integral 189
Reference 192

Appendix A: Several Theorems and Properties of Use to the Analysis 193

Appendix B: Proof of Theorem 2.1.1 195

Appendix C: Properties of the *N*-Dependent Equilibrium Measure 205

Appendix D: The Gaussian Potential 209

Appendix E: Summary of Symbols 215
