

Contents

1	Introduction	1
1.1	General Remarks on the Book Content	1
1.2	Nonlinear Continuum Thermomechanics as a Field of Research and Its Industrial Applications	3
	References	4
2	Fundamental Concepts of Mechanics	5
2.1	Statics of a Bar	5
2.2	Trusses	8
2.3	Two-Dimensional Continuum Generalization	11
3	Fundamentals of Tensor Algebra and Analysis	15
3.1	Introduction	15
3.1.1	Euclidean Space and Coordinate Systems	15
3.1.2	Scalars and Vectors	19
3.1.3	Basis of Vector Space	27
3.2	Tensors	30
3.2.1	Definitions	30
3.2.2	Operations on Tensors	33
3.2.3	Isotropic Tensors	36
3.3	Second Order Tensors	37
3.3.1	Definitions and Properties	37
3.3.2	Tensor Eigenproblem	45
3.3.3	Spectral Decomposition of Symmetric Tensor	48
3.3.4	Polar Decomposition of Tensor	53
3.4	Tensor Functions and Fields	57
3.4.1	Integration and Differentiation of Tensor Fields	58
3.4.2	Gauss–Ostrogradski Theorem	62
3.5	Curvilinear Coordinate Systems	65
3.6	Notations Used in Tensor Description	74
	Reference	79

4	Motion, Deformation and Strain in Material Continuum	81
4.1	Motion of Bodies.	81
4.2	Strain	85
4.2.1	Definitions	85
4.2.2	Physical Meaning of Strain in One Dimension.	89
4.2.3	Physical Meaning of Strain Components	90
4.2.4	Some Other Strain Tensor Properties	93
4.3	Area and Volumetric Deformation	98
4.4	Strain Rate and Strain Increments	102
4.4.1	Time Derivative of a Tensor Field. Lagrangian and Eulerian Description of Motion	102
4.4.2	Increments and Rates of Strain Tensor Measures	105
4.4.3	Strain Increments and Rates in One Dimension	109
4.5	Strain Compatibility Equations.	111
5	Description of Stress State	115
5.1	Introduction.	115
5.1.1	Forces, Stress Vectors and Stress Tensor in Continuum	115
5.1.2	Principal Stress Directions. Extreme Stress Values	122
5.2	Description of Stress in Deformable Body.	127
5.2.1	Cauchy and Piola–Kirchhoff Stress Tensors.	127
5.2.2	Objectivity and Invariance of Stress Measures	131
5.3	Increments and Rates of Stress Tensors	133
5.4	Work of Internal Forces. Conjugate Stress–Strain Pairs.	136
	References	141
6	Conservation Laws in Continuum Mechanics	143
6.1	Mass Conservation Law	143
6.2	Momentum Conservation Law	146
6.3	Angular Momentum Conservation Law	150
6.4	Mechanical Energy Conservation Law	151
7	Constitutive Equations	155
7.1	Introductory Remarks	155
7.2	Elastic Materials	156
7.2.1	Linear Elasticity.	157
7.2.2	Nonlinear Elasticity	168
7.3	Viscoelastic Materials.	173
7.3.1	One-Dimensional Models	174
7.3.2	Continuum Formulation	178
7.3.3	Energy Dissipation in Viscoelastic Materials	182
7.4	Elastoplastic Materials	184
7.4.1	One-Dimensional Models	185
7.4.2	Three-Dimensional Formulation in Plastic Flow Theory	189
	Reference.	199

8	Fundamental System of Solid Mechanics Equations	201
8.1	Field Equations and Initial-Boundary Conditions	201
8.2	Incremental Form of Equations	205
8.3	Some Special Cases	207
8.4	Example of Analytical Solution	208
9	Fundamentals of Thermomechanics and Heat Conduction	
	Problem	213
9.1	Laws of Thermodynamics	213
	9.1.1 The First Law of Thermodynamics	213
	9.1.2 The Second Law of Thermodynamics	216
9.2	Heat Conduction Problem	218
9.3	Fundamental System of Solid Thermomechanics Equations. Thermomechanical Couplings	224
9.4	Thermal Expansion in Constitutive Equations of Linear Elasticity	227
10	Variational Formulations in Solid Thermomechanics	233
10.1	Variational Principles—Introduction	233
10.2	Variational Formulations for Linear Mechanics Problems	243
	10.2.1 Virtual Work Principle and Potential Energy	243
	10.2.2 Extended Variational Formulations	250
10.3	Variational Formulations for Nonlinear Mechanics Problems	253
	10.3.1 Elasticity at Large Deformations	254
	10.3.2 Incremental Problem of Nonlinear Mechanics	257
10.4	Variational Formulations for Heat Conduction Problems	261
	Reference	264
11	Discrete Formulations in Thermomechanics	265
11.1	Discrete Formulations in Heat Conduction Problems	266
	11.1.1 Linear Problem of Stationary Heat Conduction	266
	11.1.2 General Form of the Heat Conduction Problem	269
11.2	Discrete Formulations in Solid Mechanics Problems	271
	11.2.1 Linear Problem of Statics	272
	11.2.2 Linear Problem of Dynamics	274
	11.2.3 Nonlinear Elastic Problem with Large Deformations	275
	11.2.4 Incremental Form of Nonlinear Mechanics Problem	277
11.3	Weighted Residual Method	280
12	Fundamentals of Finite Element Method	287
12.1	Introduction	287
	12.1.1 FEM Formulation for Linear Heat Conduction Problem	290
	12.1.2 FEM Formulation for Linear Static Elasticity Problem	294

12.2	FEM Approximation at the Element Level	298
12.2.1	Simple One-Dimensional Elements	298
12.2.2	Constant Strain Elements	303
12.2.3	Isoparametric Elements	308
	References	313
13	Solution of FEM Equation Systems.	315
13.1	Introduction.	315
13.2	Solution Methods for Linear Algebraic Equation Systems	319
13.2.1	Elimination Methods	320
13.2.2	Iterative Methods	323
13.3	Multigrid Methods	328
13.4	Solution Methods for Nonlinear Algebraic Equation Systems	328
13.5	Solution Methods for Linear and Nonlinear Systems of First Order Ordinary Differential Equations	332
13.6	Solution Methods for Linear and Nonlinear Systems of Second Order Ordinary Differential Equations	336
	Index	341

Introduction to Nonlinear Thermomechanics of Solids

Kleiber, M.; Kowalczyk, P.

2016, VIII, 345 p. 69 illus., Hardcover

ISBN: 978-3-319-33454-7
