

# Contents

<b>1</b>	<b>Background, Model and Questions</b>	1
1.1	Introduction and Scope of This Text	1
1.2	The Parabolic Anderson Model	4
1.3	Main Questions	8
1.4	Intermittency	9
1.5	Examples of Potentials	11
1.5.1	Discrete Space	12
1.5.2	Continuous Space	14
<b>2</b>	<b>Tools and Concepts</b>	19
2.1	Probabilistic Aspects	19
2.1.1	Branching Process with Random Branching Rates	19
2.1.2	Feynman-Kac Formula	21
2.1.3	Finite-Space Feynman-Kac Formulas	25
2.1.4	Local Times and Moments	26
2.1.5	Quenched and Annealed Transformed Path Measures	27
2.2	Functional Analytic Aspects	30
2.2.1	Eigenvalue Expansion	30
2.2.2	Relation Between Eigenvalue Expansion and the PAM	31
2.2.3	Anderson Localisation	33
2.2.4	Intermittency and Anderson Localisation	34
2.2.5	Integrated Density of States	34
2.2.6	Lifshitz Tails	36
2.3	First Heuristic Observations	36
2.3.1	The Total Mass as an Exponential Moment	37
2.3.2	Moment Asymptotics Versus Almost Sure Asymptotics	37
2.3.3	Mass Concentration	40
2.3.4	Time-Evolution of the Mass Flow	40

<b>3</b>	<b>Moment Asymptotics for the Total Mass</b>	43
3.1	Rough Bounds	43
3.2	Heuristics via Eigenvalues	44
3.3	Heuristics via Local Times	52
3.4	Decomposition into Four Potential Classes	59
3.5	The Spatially Continuous Case	65
3.5.1	Brownian Motion Among Poisson Obstacles	66
3.5.2	Gaussian Potentials	69
3.5.3	Poisson Shot-Noise Potential with High Peaks	69
<b>4</b>	<b>Some Proof Techniques</b>	71
4.1	The Problems	71
4.2	Large Deviations	72
4.2.1	LDPs for the Occupation Measures of Random Motions	73
4.2.2	LDPs for the Random Potential	75
4.3	Periodisation	75
4.4	Spectral Domain Decomposition	77
4.5	Cutting	78
4.6	Smoothing	79
4.7	Method of Enlargement of Obstacles	80
4.8	Joint Density of Local Times	80
4.9	Dynkin's Isomorphism	81
4.10	Discretisation of the Rayleigh-Ritz Formula	82
4.11	Compactification by Local-Masses Decomposition	83
<b>5</b>	<b>Almost Sure Asymptotics for the Total Mass</b>	85
5.1	Discrete Space	85
5.2	Continuous Space	94
<b>6</b>	<b>Details About Intermittency</b>	99
6.1	Survey	99
6.2	Geometric Characterisation of Intermittency	102
6.3	Eigenvalue Order Statistics	105
6.3.1	Point Process Convergence	106
6.3.2	The Class (DE)	107
6.3.3	Other Classes of Potentials	110
6.3.4	Relation to Anderson Localisation	112
6.4	Concentration in One Island	113
6.4.1	The Class (DE)	114
6.4.2	The Class (SP)	116
6.5	Ageing and Time-Correlations	118
6.5.1	The Class (DE)	119
6.5.2	The Class (SP)	120

<b>7 Refined Questions</b>	123
7.1 Beyond Logarithmic Asymptotics, and Confinement Properties	123
7.1.1 Precise Asymptotics in Case (DE): Spatial Correlations and Effective Shift	126
7.2 Correlated Potentials	129
7.3 Weak Disorder and Accelerated Motion	134
7.3.1 Acceleration of Motion	135
7.3.2 Scaled Gaussian Potential	136
7.3.3 Brownian Motion in a Scaled Poisson Potential	138
7.3.4 Scaled Renormalised Poisson Potential	139
7.4 Upper Deviations of Random Walk in Random Scenery	140
7.5 Upper Deviations of Self-Attractive Functionals of Local Times	141
7.6 Self-Attractive Path Measures	143
7.7 Transition Between Quenched and Annealed Behaviour	145
7.8 Other Diffusivities	147
7.9 PAM in a Random Environment	148
7.9.1 PAM with Random Conductances	148
7.9.2 Localisation in the Bouchaud-Anderson Model	151
7.10 Drifted PAM and Polymers	152
7.11 Branching Random Walks in Random Environment	154
7.11.1 One-Dimensional Models	155
7.11.2 Moment Asymptotics for the Population Size	155
7.11.3 Intermittency for the Particle Flow	156
<b>8 Time-Dependent Potentials</b>	159
8.1 Potentials Built Out of Particles	161
8.2 The Quenched Lyapounov Exponent	167
8.3 White Noise Potential	169
<b>Appendix: Open Problems</b>	173
<b>Bibliography</b>	179
<b>Index</b>	189

The Parabolic Anderson Model  
Random Walk in Random Potential

König, W.

2016, XI, 192 p. 4 illus., Hardcover

ISBN: 978-3-319-33595-7

A product of Birkhäuser Basel
