

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Historical Notes and Definition of the Subject Field	2
1.2	Properties of Liquids	4
	References	12
<b>2</b>	<b>Hydrostatics</b>	<b>15</b>
2.1	Some Basic Concepts	17
2.2	Fluid Pressure	19
2.3	Fundamental Equation of Hydrostatics	22
2.4	Pressure Distribution in a Density Preserving Heavy Fluid	26
2.5	Hydrostatic Buoyancy of Floating Bodies	36
2.6	Hydrostatics in an Accelerated Reference System	47
2.7	Pressure Distribution in the Still Atmosphere	52
	Reference	55
<b>3</b>	<b>Hydrodynamics of Ideal Liquids</b>	<b>57</b>
3.1	Basic Kinematic Concepts	60
3.1.1	Motion, Velocity	60
3.1.2	Streamlines, Trajectories, Streaklines	64
3.2	Mass Balance, Continuity	73
3.3	Balance of Linear Momentum	83
3.4	Bernoulli's Equation	92
3.5	Simple Applications of the Bernoulli Equation	100
3.6	Global Formulation of the Momentum Equation	117
3.7	Applications of the Balance Law of Momentum in Integrated Form	119
3.7.1	Reaction Forces Due to Fluid Flow Through Pipes	119
3.7.2	Borda Exit Orifice	120
3.7.3	Impact of a Free Jet on a Wall	125
3.7.4	Mixing Processes	126
3.7.5	Hydraulic Jump	131

3.8	Plane Flow Around Infinitely Long Wings . . . . .	135
3.8.1	Flow Through a Periodic Grid of Wings . . . . .	135
3.8.2	Flow Around a Single Wing . . . . .	140
3.9	Balance of Moment of Momentum. . . . .	146
3.10	Applications of the Balance of Angular Momentum . . . . .	153
3.10.1	Segner's Water Wheel . . . . .	153
3.10.2	Euler's Turbine Equation . . . . .	156
	References . . . . .	158
<b>4</b>	<b>Conservation of Angular Momentum—Vorticity . . . . .</b>	<b>159</b>
4.1	Circulation . . . . .	163
4.2	Simple Vorticity Theorems . . . . .	169
4.3	Helmholtz Vorticity Theorem . . . . .	175
4.4	Potential Vorticity Theorem. . . . .	188
	References . . . . .	194
<b>5</b>	<b>An Almanac of Simple Flow Problems of Ideal Fluids . . . . .</b>	<b>197</b>
5.1	General Concepts. . . . .	201
5.1.1	A Primer on Vector Analysis. . . . .	201
5.1.2	Determination of a Vector Field from Its Sources and Vortices . . . . .	208
5.2	Vortex-Free Flow Fields . . . . .	226
5.2.1	Mathematical Preliminaries . . . . .	226
5.2.2	Potential Fields . . . . .	229
5.3	Motion-Induced Force on a Body in Potential Flow. The Virtual Mass Concept. . . . .	238
5.3.1	Force on a Sphere . . . . .	239
5.3.2	Force on a Body of Arbitrary Geometry . . . . .	241
5.4	Plane Flow Configuration . . . . .	247
5.4.1	Stream Function. . . . .	247
5.4.2	Simple Plane Flows of Ideal Fluids . . . . .	253
	Appendix 5.A: Proof of the Gradient Version of GAUSS' Law . . . . .	264
	Appendix 5.B: Proof of Stokes' Law . . . . .	267
	References . . . . .	269
<b>6</b>	<b>Function-Theoretical Methods Applied to Plane Potential Flows . . . . .</b>	<b>271</b>
6.1	General Principles . . . . .	273
6.1.1	Some Notation and Mathematical Properties of Complex Functions . . . . .	273
6.1.2	Examples . . . . .	281
6.1.3	Steady Flow Around an Arbitrary Cylinder at Rest. . . . .	287
6.1.4	The Kutta-Joukowski Mapping . . . . .	290

6.2	Applications . . . . .	292
6.2.1	Flow Over a Plane Plate . . . . .	292
6.2.2	Potential Flow Over a Circular Segment . . . . .	295
6.2.3	Realistic Air-Wings with Finite Thickness . . . . .	298
6.3	The Circle Theorem of Milne-Thomson . . . . .	303
6.4	Laminar Free Jets . . . . .	307
6.4.1	Flow Through a Slit Orifice in a Vertical Wall . . . . .	307
6.4.2	Potential Flow Through a Periodic Arrangement of Slits . . . . .	311
6.5	Schwarz-Christoffel Transformation . . . . .	315
6.5.1	Build-up of the General Schwarz-Christoffel Transformation . . . . .	317
6.5.2	Examples of Schwarz-Christoffel Transformations . . . . .	323
	Appendix 6.A Some Facts on Complex Functions . . . . .	334
	References . . . . .	345
<b>7</b>	<b>Viscous Fluids . . . . .</b>	<b>347</b>
7.1	Fundamental Dynamical Equations of Viscous Fluids . . . . .	350
7.1.1	Newtonian Fluids . . . . .	356
7.1.2	Dilatant and Pseudoplastic Density Preserving Fluids . . . . .	366
7.2	Plane Wall Bounded Shear Flows . . . . .	371
7.3	Applications . . . . .	378
7.3.1	Couette Viscometer . . . . .	379
7.3.2	Cone Plate Viscometer . . . . .	383
7.3.3	Hover Craft or Oil Pressure Cushion . . . . .	384
7.3.4	Flows of Liquid Films . . . . .	387
7.3.5	Influence of the Weight of a Fluid in Plane Poiseuille Flow . . . . .	390
7.3.6	Slide Bearing Theory . . . . .	391
7.4	Three-Dimensional Creeping Flow of a Pseudoplastic Fluid with Free Surface . . . . .	397
	References . . . . .	420
<b>8</b>	<b>Simple Two- and Three-Dimensional Flow Problems of the Navier-Stokes Equations . . . . .</b>	<b>423</b>
8.1	Introductory Review . . . . .	425
8.2	Steady State Layer Flows . . . . .	426
8.2.1	Hagen-Poiseuille Flow . . . . .	427
8.2.2	Ekman Theory and Its Extensions . . . . .	440
8.3	Simple Unsteady Flows . . . . .	459
8.3.1	Oscillating Wall . . . . .	460
8.3.2	Adjustment of a Velocity Jump . . . . .	462
8.4	Stationary Axisymmetric Laminar Jet . . . . .	467
8.5	Viscous Flow in a Converging Two-Dimensional Channel . . . . .	474

8.6	Closing Remarks . . . . .	480
	Appendix 8.A: Construction of the Solution (8.22) to the Boundary Value Problem (8.8). . . . .	481
	References . . . . .	482
<b>9</b>	<b>Simple Solutions of Boundary Layer Equations. . . . .</b>	<b>485</b>
9.1	Preview . . . . .	487
9.2	Two-Dimensional Boundary Layer Flow in the Vicinity of a Stagnation Point . . . . .	488
9.3	Three-Dimensional Boundary Layer Flow in the Vicinity of a Stagnation Point . . . . .	494
9.4	Boundary Layer Flows Around Wedges . . . . .	497
	9.4.1 Boundary Layer Equations . . . . .	497
	9.4.2 Flow Along Sidewalls of Wedges . . . . .	499
	9.4.3 Rotating Disk of Infinite Extent . . . . .	507
9.5	The BLASIUS Boundary Layer. . . . .	516
9.6	Round Laminar Jet—A Not So Simple Boundary Layer Problem . . . . .	523
9.7	Boundary Layers of the NAVIER-STOKES Equations Treated by Matched Asymptotic Expansions . . . . .	529
	9.7.1 A Simple Introductory Example. . . . .	529
	9.7.2 The Blasius Boundary Layer . . . . .	533
9.8	Global Laws of the Steady Boundary Layer Theory . . . . .	538
	9.8.1 Global Mass and Momentum Balances . . . . .	538
	9.8.2 Holstein-Bohlen Procedure . . . . .	545
9.9	Non-stationary Boundary Layers . . . . .	553
	9.9.1 Impulsive Start from Rest . . . . .	554
	9.9.2 Boundary Layer Formed at the Boundary of an Oscillating Body . . . . .	561
	9.9.3 Oscillation-Induced Drift Current . . . . .	566
	9.9.4 Non-Stationary Plate Boundary Layer. . . . .	568
	References . . . . .	573
<b>10</b>	<b>Pipe Flows. . . . .</b>	<b>577</b>
10.1	Introductory Remarks . . . . .	579
10.2	Laminar Pipe Flow. . . . .	580
	10.2.1 The Law of Hagen-Poiseuille. . . . .	580
	10.2.2 Laminar Flow in Cylindrical Pipes of Arbitrary Cross-Section . . . . .	583
	10.2.3 Flow Out of a Vessel . . . . .	586
	10.2.4 Influence of the Wall Drag of a Pipe to the Exit Flow from a Vessel . . . . .	589

10.3	Turbulent Flows in Pipes . . . . .	592
10.3.1	Coefficient of Resistance . . . . .	592
10.3.2	Plane Turbulent Flow According to Prandtl and von Kármán . . . . .	602
10.3.3	Calculation of Pressure Loss in Pipe Flows . . . . .	608
10.3.4	Questioning the Prandtl-von Kármán Logarithmic Velocity Profile . . . . .	614
10.4	Concluding Remarks . . . . .	618
