# Contents

**1 Introduction** . . . . . 1
1.1 The Standard ΛCDM Model of Cosmology . . . . . 1
1.1.1 Key Equations . . . . . 4
1.2 Beyond ΛCDM with Modified Gravity . . . . . 5
1.2.1 Modified Gravity: the Broad Picture . . . . . 6
1.2.2 The Need for Screening Mechanisms . . . . . 8
1.2.3 Strategies to Constrain Modified Gravity . . . . . 12
1.3 Thesis Outline . . . . . 16
References . . . . . 17

**2 Linear Perturbations in Galileon Gravity Models** . . . . . 23
2.1 The Covariant Galileon Model . . . . . 24
2.2 The Perturbation Equations . . . . . 27
2.2.1 The Perturbed Equations in General Relativity . . . . . 27
2.2.2 The Perturbation Quantities in Galileon Gravity . . . . . 30
2.2.3 Perturbed Equations in k-space . . . . . 32
2.3 Understanding the Galileon Parameter Space: Free Parameters and Stability Conditions . . . . . 36
2.3.1 Scaling Degeneracy . . . . . 36
2.3.2 Tracker Solution . . . . . 37
2.3.3 Stability Conditions . . . . . 39
2.4 Results . . . . . 40
2.4.1 Background . . . . . 40
2.4.2 Linear Perturbation Results . . . . . 42
2.5 Summary . . . . . 51
References . . . . . 52

**3 The Observational Status of Galileon Gravity After Planck** . . . . . 55
3.1 Methodology . . . . . 55
3.1.1 MCMC Chains Setup . . . . . 55
3.1.2 Background Evolution: Justifying the Use of the Tracker Solution . . . . . 56

3.1.3 Parameter Space . . . 58
3.1.4 Datasets . . . 61
3.2 Overview of Previous Observational Constraints . . . 62
3.3 Results: Cubic Galileon . . . 63
3.3.1 Cosmological Constraints . . . 63
3.3.2 Sign of the ISW Effect . . . 68
3.3.3 Future Constraints . . . 71
3.4 Results: Quartic and Quintic Galileon . . . 73
3.4.1 Cosmological Constraints . . . 73
3.4.2 Local Time Variation of $G_{\rm eff}$ in the Quartic model . . . 75
3.4.3 The Galileon Subspace of Parameters in the Quintic Model . . . 78
3.5 Tensor Perturbations . . . 81
3.6 Summary . . . 84
References . . . 86

**4 Spherical Collapse in Galileon Gravity** . . . 91
4.1 Spherically Symmetric Nonlinear Equations . . . 92
4.2 Fifth Force Solutions . . . 96
4.2.1 Quintic Galileon . . . 96
4.2.2 Quartic Galileon . . . 99
4.3 Excursion Set Theory in Galileon Gravity . . . 102
4.3.1 Basics of Excursion Set Theory . . . 102
4.3.2 Linear Growth Factor and Spherical Collapse Dynamics . . . 106
4.4 Results . . . 108
4.4.1 Evolution of the Critical Density $\delta_c$ . . . 109
4.4.2 Halo Mass Function . . . 110
4.4.3 Halo Bias . . . 112
4.5 Summary . . . 113
References . . . 115

**5 N-Body Simulations and Halo Modelling in Galileon Gravity Cosmologies** . . . 117
5.1 N-Body Simulations of Cubic Galileon Cosmologies . . . 118
5.1.1 Force Equations in the Quasi-static and Weak-Field Limits . . . 118
5.1.2 Vainshtein Screening . . . 121
5.2 Halo Model of the Nonlinear Matter Power Spectrum . . . 124
5.2.1 Halo Model . . . 124
5.2.2 Halo Mass Function . . . 125
5.2.3 Linear Halo Bias . . . 126
5.2.4 Halo Density Profiles . . . 126

5.3 Results . . . 127
5.3.1 Summary of the Simulations . . . 128
5.3.2 Mass Function . . . 128
5.3.3 Linear Halo Bias . . . 132
5.3.4 Halo Occupation Distribution Analysis . . . 133
5.3.5 Concentration-Mass Relation . . . 136
5.3.6 Halo Model Matter Power Spectrum . . . 138
5.4 Summary . . . 141
References . . . 143

**6 Nonlinear Structure Formation in Nonlocal Gravity** . . . 147
6.1 The $\mathcal{R}\Box^{-2}\mathcal{R}$ Nonlocal Gravity Model . . . 148
6.1.1 Action and Field Equations . . . 148
6.1.2 Background Equations . . . 150
6.1.3 Spherically Symmetric Nonlinear Equations . . . 151
6.1.4 Model Parameters . . . 152
6.2 Results . . . 153
6.2.1 N-Body Simulations Summary . . . 153
6.2.2 Linear Growth and $\delta_c$ Curves . . . 154
6.2.3 Interpretation of the Constraints from Solar System Tests of Gravity . . . 155
6.2.4 Halo Mass Function . . . 158
6.2.5 Halo Bias . . . 160
6.2.6 Halo Concentration . . . 160
6.2.7 Nonlinear Matter Power Spectrum . . . 162
6.2.8 Nonlinear Velocity Divergence Power Spectrum . . . 164
6.3 Summary . . . 166
References . . . 168

**7 Lensing by Clusters and Voids in Modified Lensing Potentials** . . . 171
7.1 Lensing Equations . . . 172
7.1.1 Cluster Lensing Basics . . . 172
7.1.2 Convergence in ΛCDM . . . 174
7.1.3 Convergence in Nonlocal and Cubic Galileon Gravity . . . 174
7.2 Galaxy Cluster Lensing Masses . . . 175
7.2.1 Cluster Density Profiles . . . 175
7.2.2 Fitting Methodology . . . 176
7.2.3 Other Subtleties in Using Cluster Lensing Data to Test Gravity . . . 179
7.2.4 Lensing Mass Estimates in the Modified Gravity Models . . . 181
7.2.5 The Connection with Tests of Gravity . . . 184
7.3 Weak-Lensing by Voids . . . 187
7.3.1 Finding Voids in the Simulations . . . 187
7.3.2 Void Size Function . . . 189

7.3.3 Void Density Profiles . . . . . 191
7.3.4 Void Force Profiles in the Galileon Model . . . . . 193
7.3.5 Void Lensing Signal . . . . . 196
7.3.6 The Connection to Observations . . . . . 198
7.4 Summary . . . . . 201
References . . . . . 203

**8 Summary, Conclusions and Future Work** . . . . . 209
8.1 Summary and Conclusions . . . . . 209
8.1.1 Linear Theory Constraints on the Galileon Model . . . . . 210
8.1.2 Nonlinear Structure Formation in the Galileon Model . . . . 210
8.1.3 Linear and Nonlinear Structure Formation in Nonlocal Gravity . . . . . 211
8.1.4 Cluster and Void Lensing in the Cubic Galileon and Nonlocal Gravity Models . . . . . 212
8.2 Future Research Directions . . . . . 213
8.3 Concluding Remarks . . . . . 216
References . . . . . 217

Structure Formation in Modified Gravity Cosmologies

Barreira, A.

2016, XVIII, 218 p. 59 illus. in color., Hardcover
ISBN: 978-3-319-33695-4
