

Contents

1	Introduction to Radioguided Surgery	1
1.1	The Importance of Full Tumor Resection	1
1.1.1	Non Nuclear Tools	2
1.1.2	R.G.S. with Gamma	5
1.2	Limits of Existing Techniques	10
1.3	Possible Developments	11
1.3.1	β^+	11
1.3.2	β^-	13
	References	17
2	The FLUKA Monte Carlo Code	19
2.1	Physics in FLUKA	20
2.1.1	Electrons and Positrons	21
2.1.2	Photons	21
2.1.3	Cut-Off Energy	22
2.2	Geometry in FLUKA	22
2.2.1	Voxel Geomertry—CT Import	23
2.3	Input File Structure in FLUKA	24
2.4	Output in FLUKA	25
	References	26
3	Design and Tests of the Probe	27
3.1	Detector Choice and Characterization	27
3.1.1	Light Attenuation Length	29
3.1.2	α -Quenching Factor	31
3.1.3	Photon Sensitivity	35
3.1.4	Simulation	37
3.2	First Probe Prototypes	38
3.2.1	Probe1 Testing	39
3.2.2	Comparison Between Data and Simulation	43

3.3	Probes Optimization and Development	43
3.3.1	Spectrophotometry	45
3.3.2	Active Area Optimization.	45
3.3.3	Shielding Optimization	48
	References	50
4	Medical Applications	53
4.1	Brain Surgery	53
4.1.1	Human Brain Structure and Cerebral Tumors	53
4.1.2	Radio Guided Surgery Applicability on Cerebral Tumors	61
4.2	Neuroendocrine Tumors Surgery	72
4.2.1	Neuroendocrine Tumors: Origin and Therapy	72
4.2.2	Feasibility Study of β^- -RGS in Neuroendocrine Tumors	74
	References	84
5	Evaluation of Probe Performances	85
5.1	Developments in FLUKA.	85
5.1.1	PET Import	86
5.1.2	Scoring Routines.	89
5.2	Expected Signal Rates in Brain Surgery Applications.	90
5.2.1	Simulation of the Setup	92
5.2.2	Results.	96
	References	96
6	Conclusions	97
	Curriculum Vitae	99

An Intraoperative Beta–Probe for Cancer Surgery

Collamati, F.

2016, XIV, 100 p. 55 illus., 24 illus. in color., Hardcover

ISBN: 978-3-319-33698-5
