

Contents

1	Dynamical Systems and Modeling	1
1.1	State Variables and State Vector	2
1.2	Input and Output	3
1.3	Modeling	3
1.4	Analytical Modeling	4
1.5	Physical and Computational Systems	7
1.6	Mathematical Model	7
1.7	State Space Method	8
1.8	Linearization	10
1.9	Transfer Function	12
	Problems	17
	References	17
2	Lagrangian Modeling	19
2.1	Modeling in Three Axes	21
2.2	Modeling in Cartesian and Spherical/Polar Coordinates	22
2.3	Work and Energy Formulation	25
2.4	State Space Representation	28
	Problems	32
	References	33
3	Introduction to Bond Graph Modeling	35
3.1	Power Variables	35
3.2	Pseudo Bond Graph	37
3.3	Energy Variables	37
3.4	Excitation and Response	39
3.5	Word Bond Graph	39
3.6	Causality Assignment	40
3.7	Active Bond	40

3.8	Connection of Bonds	43
	Problems	45
	References	45
4	Elements of Bond Graph	47
4.1	1-Port Elements	47
4.1.1	Sources	47
4.1.2	1-Port Resistor	48
4.1.3	1-Port Capacitor	49
4.1.4	1-Port Inertia	50
4.2	Derivative (Differential) Causality and Integral Causality	51
4.3	2-Port Elements	52
4.3.1	Transformer	52
4.3.2	Gyrator	54
4.4	Junctions	54
4.4.1	0-Junction	56
4.4.2	1-Junction	56
4.5	Modulated Transformer and Gyrator	58
4.6	Modulated Sources	59
	Problems	59
	References	62
5	Analytical Formulation by Bond Graph Modeling	63
5.1	Modeling Procedure	63
5.2	Sensors	70
5.3	Mechanical Systems	70
5.4	State Space Equations	74
5.5	20-Sim Software Tips	82
	Problems	84
	References	84
6	Advance Bond Graph Modeling	85
6.1	Algebraic Loops	85
6.2	Derivative Causality	88
6.3	Fields	90
6.4	Series Motor	93
6.5	Resistive Fields	95
6.6	Bridge Circuit	96
6.7	Combination of Elements	96
6.8	Vector Bond Graphs	97
	Problems	100
	References	102
7	Simulation and Analysis of State Space Systems	103
7.1	Free Response of First-Order System	105
7.2	Eigenvalues of Higher Order System	107

7.3	Free Response of a Second-Order System	108
7.3.1	Undamped Systems	109
7.3.2	Damped Systems	111
7.4	Relationship Between Eigenvalue and Time	116
7.5	Damped Natural Frequency	116
7.6	Amplification Not Damping	118
7.7	Internal Stability of the System	121
7.8	Forced Response	123
7.8.1	Impulse Response	124
7.8.2	Step Response	127
7.8.3	Sinusoidal Response	128
7.9	Resonance	129
7.10	Decaying Sinusoidal Response	131
7.11	External Stability	134
7.12	Total Response of the System	137
	Problems	139
	References	141
8	Introduction to Control Systems	143
8.1	Representation of Controller	145
8.2	Error Model	146
8.3	Estimator or Observer	147
8.4	Control Design	150
8.4.1	Performance Specifications	150
8.5	Controlling the Response	152
8.5.1	PID Control	153
8.5.2	Compensation	154
8.5.3	Pole Placement Control Design	155
8.6	Shaping the Dynamic response	155
8.7	Gain Scheduling in Multivariable Control	157
	Problems	158
	References	159
9	Recent Applications of Bond Graph Modeling	161
9.1	Bond Graph Models of the Physiological Elements	161
9.1.1	Muscular Structures	162
9.1.2	Muscle Spindle Model	164
9.1.3	Golgi Tendon Organ Model	167
9.1.4	The Inertial Subsystem	167
9.2	The Complete Musculoskeletal System Model	168
9.2.1	The Extended Musculoskeletal Structure	171
9.3	Anthropomorphic Hand through Bond Graph	172
9.4	Movement Coordination Problem for Human Fingers	173
9.5	Electrical-Impedance Plethysmography	176
9.6	Evaporation in Infant Incubator	177

9.7	Customized Robotic Arm	178
9.8	Bilateral Master–Slave Telemanipulation	179
	Problems	183
	References	184

Real Time Modeling, Simulation and Control of
Dynamical Systems

Mughal, A.M.

2016, XVI, 187 p. 148 illus., 89 illus. in color., Hardcover

ISBN: 978-3-319-33905-4
