

# Contents

<b>1</b>	<b>Systemic Risk Basics</b>	1
1.1	The Nature of This Book	2
1.2	What Is Systemic Risk?	4
1.2.1	Defining SR	5
1.2.2	Haldane's 2009 Speech	6
1.2.3	A Lesson from Network Science: The Sandpile Model	8
1.3	Capital Structure of a Bank	9
1.3.1	Bank Asset Classes	10
1.3.2	Debt and Liabilities	12
1.3.3	Equity	13
1.4	Channels of Systemic Risk	14
1.5	Regulatory Capital and Constraints	16
<b>2</b>	<b>Static Cascade Models</b>	19
2.1	Default Cascades	22
2.1.1	The Eisenberg–Noe 2001 Model	23
2.1.2	Reduced Form E–N Cascade Mechanism	27
2.1.3	The Gai–Kapadia 2010 Default Model	28
2.2	Liquidity Cascades	30
2.2.1	Gai–Kapadia 2010 Liquidity Cascade Model	31
2.2.2	The Liquidity Model of S.H. Lee 2013	33
2.2.3	Generalized Liquidity Cascades	34
2.3	Asset Fire Sales	35
2.3.1	Fire Sales of One Asset	35
2.3.2	Fire Sales of Many Assets	38
2.4	Random Financial Networks	40
2.5	Bibliographic Notes	43
<b>3</b>	<b>Random Graph Models</b>	45
3.1	Definitions and Basic Results	46
3.1.1	Random Graphs	48
3.2	Configuration Random Graphs	49

3.3	Assortative Configuration Graphs . . . . .	50
3.3.1	The ACG Construction . . . . .	51
3.3.2	Locally Tree-Like Property. . . . .	54
3.3.3	Approximate ACG Simulation . . . . .	58
3.4	Inhomogeneous Random Graphs . . . . .	60
3.5	Measures of Network Topology . . . . .	66
3.5.1	Connectivity. . . . .	67
3.5.2	Measures from the Degree Distributions. . . . .	67
3.5.3	Centrality Measures. . . . .	67
3.5.4	Clustering Coefficients. . . . .	68
3.5.5	Connectivity and Connected Components. . . . .	69
<b>4</b>	<b>Percolation and Cascades. . . . .</b>	<b>71</b>
4.1	Branching Processes . . . . .	72
4.2	Percolation on Configuration Graphs . . . . .	74
4.3	Site Percolation. . . . .	78
4.4	Bootstrap Percolation. . . . .	79
4.5	Watt's 2002 Model of Global Cascades . . . . .	80
4.5.1	The Framework . . . . .	80
4.5.2	The Main Result. . . . .	83
4.5.3	The Cascade Condition . . . . .	85
4.5.4	The Frequency of Global Cascades . . . . .	86
4.6	Numerical Experiments on the Watts Model . . . . .	88
4.7	Extensions of the Watts Model . . . . .	90
4.8	Dependence in Random Financial Networks . . . . .	91
4.8.1	The LTI Property . . . . .	93
4.8.2	Ramifications of the LTI Property . . . . .	94
<b>5</b>	<b>Zero Recovery Default Cascades . . . . .</b>	<b>95</b>
5.1	The Gai–Kapadia Model . . . . .	96
5.1.1	Shocks and the Solvency Condition. . . . .	97
5.2	The G–K Model with Random Link Weights . . . . .	100
5.2.1	A Theorem on the G–K Cascade. . . . .	103
5.3	Measures of Cascade Impact. . . . .	105
5.4	The Cascade Condition . . . . .	108
5.4.1	Frequency and Size of Global Cascades. . . . .	110
5.5	Testing and Using the Cascade Mapping . . . . .	113
5.6	A New Model for Default Cascades with Asymmetric Shocks. . . . .	114
5.7	Cascade Computations . . . . .	118
5.8	Numerical Experiments . . . . .	120
5.8.1	Experiment 1: Benchmark Gai–Kapadia Model. . . . .	120
5.8.2	Experiment 2: Assortative Networks . . . . .	121
5.8.3	Experiment 3: Random Buffers and Link Weights. . . . .	123

<b>6 Future Directions for Cascade Models . . . . .</b>	<b>125</b>
<b>Appendix A: Background Material . . . . .</b>	<b>129</b>
<b>References . . . . .</b>	<b>133</b>
<b>Index . . . . .</b>	<b>137</b>
