1	Introduction	1
1.1	Control over Networks	1
1.1.1	General Issues	1
1.1.2	Work in the Area of Control over Network	4
1.2	System Architecture	6
1.2.1	Single Loop Schemes	7
1.2.2	Multi-loop Schemes	8
1.3	Event-Based Control	10
1.3.1	Preliminaries	10
1.3.2	Event-Based Control and NCS	11
1.4	Model-Based Control in NCS	14
1.5	Objectives of the Thesis	15
1.6	Outlines and Contributions	16
1.7	Publications and Projects	17
	References	19
2	Anticipative Control Design in Internet-Like Networks	25
2.1	Introduction	25
2.2	Contributions of This Chapter	26
2.3	Assumptions	27
2.4	The Controller Adaptation Layer (CAL)	30
2.4.1	Packets Processing	30
2.4.2	Control Sequence Computation	31
2.5	The Process Adaptation Layer (PAL)	32
2.6	Event-Based Anticipative Control	33
2.6.1	CAL Design for Event-Based Control	34
2.6.2	PAL Design for Event-Based Control	35
2.7	Stability Analysis	36
2.7.1	Analysis of the Maximum RTT and the Model Uncertainties	39
2.7.2	Analysis of the Error Bounds	42

2.8	Disturbance Estimator	44
2.8.1	Stability Analysis.	47
2.9	Output-Based Event-Triggered Control	48
2.9.1	PAL Design for Output Measurement.	49
2.9.2	CAL Design for Output Measurement	50
2.9.3	Stability Analysis.	52
2.9.4	PI Anticipative Control.	54
2.10	Centralized Anticipative Control for N Subsystems	56
2.10.1	The Scheduler	58
2.11	Conclusions	60
	References	60
3	Implementation and Experimental Evaluation of the Anticipative Control	63
3.1	Contributions of This Chapter	63
3.2	Experimental Framework	63
3.2.1	Prototypes Overview	64
3.3	Implementing the CAL and the PAL in LabVIEW.	68
3.3.1	Implementation of the PAL.	68
3.3.2	Implementation of the CAL.	69
3.4	Experimental Results	70
3.4.1	Performance of Event-Based Control	71
3.4.2	Response to Disturbances	73
3.4.3	PI Anticipative Controller	75
3.4.4	Network: Delays and Packet Losses	76
3.5	Conclusions	79
	References	80
4	Distributed Event-Based Control for Interconnected Linear Systems.	81
4.1	Introduction	81
4.2	Contributions of this Chapter	82
4.3	Background and Problem Statement.	83
4.3.1	Matrix and Perturbations Analysis	83
4.3.2	Problem Statement.	86
4.4	Event-Based Control Strategy	88
4.5	Results for Perfect Decoupling	89
4.5.1	Static Trigger Functions	93
4.5.2	Pure Exponential Trigger Functions	93
4.5.3	Simulation Results	94
4.6	The Non-perfect Decoupling Case	97
4.6.1	Simulation Results	100

4.7	Extension to Discrete-Time Systems.	101
4.7.1	System Description	101
4.7.2	Discrete-Time Trigger Functions	102
4.7.3	Stability Analysis.	103
4.8	Conclusions	105
	References	106
5	Extensions and Improvements of the Distributed Event-Based Control	107
5.1	Introduction	107
5.2	Contributions of This Chapter	109
5.3	Extension to Non-reliable Network	110
5.3.1	Transmission Protocols.	111
5.3.2	Performance Analysis for Perfect Decoupling	114
5.3.3	Performance Analysis for Non Perfect Decoupling.	121
5.3.4	Simulation Results.	124
5.4	Reducing Actuation in Distributed Control Systems	127
5.4.1	Trigger Functions	127
5.4.2	Performance Analysis.	130
5.4.3	Simulation Results.	134
5.5	Model-Based Design	137
5.5.1	Main Result	139
5.5.2	Simulation Results.	141
5.6	Conclusions	142
	References	143
6	Simulation Tools and Application Example of the DEBC: Networked Mobile Robots	145
6.1	Introduction	145
6.2	Contributions of This Chapter	146
6.3	Formation Control for Networked Mobile Robots	147
6.3.1	Multi-agent Systems and the Consensus Problem.	147
6.3.2	Formation Control	149
6.3.3	Model of Non-holonomic Mobile Robots	150
6.3.4	Time-Schedule Control.	153
6.3.5	Robot Wireless Communication Protocols.	154
6.4	MaSS: Multi-agent Systems Simulator	155
6.4.1	Existing Tools.	156
6.4.2	Description of the GUI.	157
6.4.3	Modeling a Multi-agent System in Ejs	159
6.4.4	Using MaSS	164

6.5	Application Example to a Real Testbed	167
6.5.1	Experimental Framework	168
6.5.2	Experimental Results	169
6.6	Conclusions	175
	References	175
7	Conclusions and Future Work	177
7.1	Conclusions	177
7.2	Future Work	178
	References	179
8	Proofs	181
8.1	Proof of Theorem 2.2.	181
8.2	Proof of Theorem 2.3.	182
8.3	Proof of Theorem 4.2.	182
8.4	Derivation of (4.45)	184
8.5	Proof of Theorem 4.3.	185
8.6	Proof of Proposition 5.2	187
8.7	Proof of Theorem 5.3.	188
8.8	Proof of Theorem 5.4.	189
8.9	Proof of Theorem 5.5.	190
8.10	Proof of Theorem 5.6.	191
	Appendix A: Prototypes Models.	193
	Appendix B: Software	199

Contributions to Networked and Event-Triggered
Control of Linear Systems
