

Preface

It is a great pleasure to present the Proceedings of the 6th International Conference on Cloud Computing (CloudComp 2015). This year's conference continued its tradition of bringing together researchers, developers, and industry professionals to discuss recent advances and experiences in clouds, cloud computing, and related ecosystems and business support. The conference also provides a forum for presenting the recent advances and results obtained in the wider area of cloud computing, giving users and researchers alike a chance to gain better insight into the capabilities and limitations of current cloud systems.

CloudComp 2015 received 89 paper submissions, from which the Technical Program Committee (TPC) selected 36 regular papers for presentation and publication in these proceedings after rigorous reviews by expert TPC members. The acceptance rate is 40.44 %. The conference consisted of six symposia that covered a broad range of research aspects. In addition to these paper presentations, CloudComp 2015 also featured two inspiring keynotes on software-defined cloud systems and cloud-assisted big data application. We hope that the conference proceedings will serve as a valuable reference to researchers and developers in the area.

Located in the charming and cultural city of Daejeon at an enchanting time of the year, CloudComp 2015 was an exciting and stimulating event. It advanced our understanding of cloud computing and opened up new directions for research and development.
