

Contents

1	Introduction	1
1.1	Derivation of MFG Models	2
2	Explicit Solutions, Special Transformations, and Further Examples	9
2.1	Explicit Solutions	9
2.2	The Hopf–Cole Transform	10
2.3	Gaussian-Quadratic Solutions	11
2.4	Interface Formation	12
2.5	Bibliographical Notes	13
3	Estimates for the Hamilton–Jacobi Equation	15
3.1	Comparison Principle	15
3.2	Control Theory Bounds	16
3.3	Integral Bernstein Estimate	25
3.4	Integral Estimates for HJ Equations	29
3.5	Gagliardo–Nirenberg Estimates	35
3.6	Bibliographical Notes	37
4	Estimates for the Transport and Fokker–Planck Equations	39
4.1	Mass Conservation and Positivity of Solutions	39
4.2	Regularizing Effects of the Fokker–Planck Equation	41
4.3	Fokker–Planck Equation with Singular Initial Conditions	43
4.4	Iterative Estimates for the Fokker–Planck Equation	44
4.5	Relative Entropy	56
4.6	Weak Solutions	59
4.7	Bibliographical Notes	61
5	The Nonlinear Adjoint Method	63
5.1	Representation of Solutions and Lipschitz Bounds	64
5.2	Conserved Quantities	65
5.3	The Vanishing Viscosity Convergence Rate	66
5.4	Semiconcavity Estimates	69
5.5	Lipschitz Regularity for the Heat Equation	70

5.6	Irregular Potentials	72
5.7	The Hopf–Cole Transform	75
5.8	Bibliographical Notes	76
6	Estimates for MFGs	77
6.1	Maximum Principle Bounds	78
6.2	First-Order Estimates	79
6.3	Additional Estimates for Solutions of the Fokker–Plank Equation	81
6.4	Second-Order Estimates	82
6.5	Some Consequences of Second-Order Estimates	84
6.6	The Evans Method for the Evans–Aronsson Problem	85
6.7	An Energy Conservation Principle	87
6.8	Porreta’s Cross Estimates	88
6.9	Bibliographical Notes	95
7	A Priori Bounds for Stationary Models	97
7.1	The Bernstein Method	97
7.2	A MFG with Congestion	98
7.3	Logarithmic Nonlinearity	100
7.4	Bibliographical Notes	103
8	A Priori Bounds for Time-Dependent Models	105
8.1	Subquadratic Hamiltonians	106
8.2	Quadratic Hamiltonians	108
8.3	Bibliographical Notes	109
9	A Priori Bounds for Models with Singularities	111
9.1	Logarithmic Nonlinearities	111
9.2	Congestion Models: Local Existence	115
9.3	Bibliographical Notes	123
10	Non-local Mean-Field Games: Existence	125
10.1	First-Order, Non-local Mean-Field Games	125
10.2	Second-Order, Non-local Mean-Field Games	128
10.3	Bibliographical Notes	130
11	Local Mean-Field Games: Existence	131
11.1	Bootstrapping Regularity	131
11.2	Regularization Methods	133
11.3	Continuation Method: Stationary Problems	134
11.4	Continuation Method: Time-Dependent Problems	138
11.5	Bibliographical Notes	144
	References	145

Regularity Theory for Mean-Field Game Systems

Gomes, D.A.; Pimentel, E.A.; Voskanyan, V.

2016, XIV, 156 p. 4 illus. in color., Softcover

ISBN: 978-3-319-38932-5
