

Contents

1	Black-Body Radiative Functions in a Given Spectral Range	1
1.1	Total Energy Density	1
1.2	Stefan-Boltzmann Law	2
1.3	Number Density of Photons	3
	References	4
2	Thermodynamics of Black-Body Radiation	
	in a Finite Spectral Range	5
2.1	General Relationships	5
2.2	Helmholtz Free Energy Density	6
2.3	Entropy Density	7
2.4	Heat Capacity at Constant Volume Density	7
2.5	Pressure	7
2.6	Enthalpy Density	8
2.7	Black-Body Radiative and Thermodynamic Functions for Different Domains	8
	References	10
3	Examples of the Use of the Tables 6.1–6.3 for	
	Practical Applications	11
3.1	Fourier Transform Infrared Radiant Spectrometer (FT-IR)	11
3.2	Far Infrared Absolute Spectrophotometer (FIRAS)	13
3.3	High Temperature Radiance Spectroscopy	14
3.4	Cosmic Microwave Background Radiation (CMB)	16
	References	18
4	Chromaticity Properties of Black-Body Radiation	
	for Different Color Spaces	19
4.1	General Approach	19
	Step 1. Obtaining RGB Tristimulus Values	20
	Step 2. Getting Normalized Chromaticity Coordinates	25

Step 3. Choice of the RGB Color Space Parameters	25
Step 4. Conversion Between <i>rgb</i> and <i>xyz</i> Coordinates	26
Step 5. Conversion from <i>xyz</i> to <i>XYZ</i> Coordinates	26
Step 6. Normalization of the Luminosity for White Color	27
Step 7. Representation of the Transformation Matrix in the <i>XYZ</i> Coordinates	27
Step 8. Solving the Equation for the White Point	28
Step 9. Reverting the Transformation Matrix	28
Step 10. Out-of-Gamut Corrections	29
Step 11. Non-linear Transformations (Gamma-Correction)	30
4.2 Rec. 709 (HDTV) Color Space	30
4.3 sRGB Color Space	31
4.4 Adobe RGB Color Space	31
References	33
5 Optimization Problems for the Devices Using the Black-Body Thermal Radiation	35
5.1 General Guidelines for the Optimization of the Thermal Radiation Devices Working in a Finite Range of Frequencies	35
Type 1: Search for the Optimal Interval	36
Type 2: Search for the Optimal Temperature	36
5.2 The Most Intensively Radiating Frequency Interval	37
Optimization Problem 1: The Most Intensively Radiating Interval of Frequencies	37
5.3 Optimization for the Maximum Number of Photons	43
Optimization Problem 2: Interval of Frequencies Which Emits the Maximal Number of Photons	43
5.4 Search for the Temperature for the Most Efficient Thermal Radiation from a Given Frequency Interval	44
Optimization Problem 3: Search for the Temperature for the Most Efficient Thermal Radiation from a Given Frequency Interval	47
5.5 Analytical Solution of the Equation $F_n(x_1, s) = 0$	51
References	53
6 Tables of Black-Body Radiative, Thermodynamic, and Chromatic Functions	55
6.1 Physical Constants	55
6.2 Description of the Tables	55
Appendix A: Derivation of the Formula for the Total Energy Density in a Given Spectral Range	447
Appendix B: Derivation of the Formula for the Helmholtz Free Energy Density in a Finite Range of Frequencies	451

Black-body Radiative, Thermodynamic, and Chromatic
Functions: Tables in Finite Spectral Ranges

Fisenko, A.I.; Lemberg, V.F.
