1	Asymmetric Synthesis of the Aminocyclitol Pactamycin, A Universal Translocation Inhibitor	1
1.1	Introduction	1
1.2	Background	1
1.2.1	Introduction, History, and Biological Activity of Pactamycin	1
1.2.2	Pactamycin Structural Features, Biosynthesis, and Previous Synthetic Endeavors	3
1.2.3	Initial Retrosynthetic Analysis and Summary of Preliminary Route	5
1.3	Results and Discussion	6
1.3.1	C2 Unfunctionalized Desymmetrization Approach: Strategy Development	6
1.3.2	Substrate Preparation for Symmetry-Breaking Reduction	7
1.3.3	Symmetry-Breaking Reduction and Stereochemical Analysis	8
1.3.4	Intramolecular C5 Addition	9
1.3.5	Attempts at Lactone Reduction	9
1.3.6	Revision of Strategy and Early Stage Incorporation of C2 Functionality	10
1.3.7	C2 Furan Approach—Substrate Preparation and Desymmetrization Studies	11
1.3.8	Advancement of Desymmetrization Product to Pactamycin	13
1.3.9	C2 Mannich Reaction Development	14
1.3.10	C2 Mannich Product Symmetry-Breaking Reduction Studies	16
1.3.11	Stereochemical Analysis: Conclusions	18
1.3.12	Attempted Acylation/Cyclocondensation Route	19
1.3.13	Formaldehyde Aldol/Cyclocondensation Approach	20

1.3.14	Installation of C3, C4, C5 Stereocenters	22
1.3.15	Unambiguous Assignment of Stereochemical Identity.	23
1.3.16	Implications of C5 Ketone Methylation	24
1.3.17	Implications of X-Ray Study to the Symmetry Breaking Reduction.	25
1.3.18	Absolute Confirmation of Symmetry-Breaking Reduction Stereochemistry, Desymmetrization Analysis, and a Fortuitous Stereochemical Correction.	26
1.3.19	Endgame and Synthesis Completion.	28
1.4	Conclusion	31
1.5	Experimental Details	32
	References	64
2	Preparation and Biological Evaluation of Synthetic and Polymer-Encapsulated Congeners of the Antitumor Agent Pactamycin: Insight into Functional Group Effects and Biological Activity.	67
2.1	Introduction	67
2.2	Background	67
2.2.1	Importance of Natural Products in Pharmaceutical Development.	67
2.3	Results and Discussion.	73
2.3.1	C3 Aniline Derivative Preparation	73
2.3.2	Derivatization at the C1 Dimethyl Urea: A Surprising Ring Closure	76
2.3.3	Preparation of Pactamycate Derivatives	77
2.3.4	C5 Derivatization	79
2.3.5	Elaboration of C5 Addition Products to Pactamycin Derivatives	80
2.3.6	Derivative Preparation at the C6 Hydroxymethylene Position	81
2.3.7	Attempts to Prepare C7-Deoxypactamycin Derivatives	83
2.3.8	Synthesis of <i>Ent</i> -Pactamycin	85
2.3.9	<i>Carcinoma</i> in Vitro Biological Evaluation	86
2.3.10	Analysis of Pactamycin Derivatives via NCI 60-Cell Line Screen	90
2.3.11	Pactamycin Nanoparticle Fabrication and Biological Evaluation	90
2.4	Conclusion	92
2.5	Experimental Details	92
	References	148

3	Inception and Development of a Global and Local Desymmetrization Approach to the Synthesis of Steroidal Alkaloids: Stereocontrolled Total Synthesis of Paspaline	151
3.1	Introduction	151
3.2	Background	151
3.2.1	Historical Perspective on Ergot Alkaloids	151
3.2.2	Structure Analysis and Biosynthetic Proposal for Paspaline	152
3.2.3	Smith Synthesis of Paspaline	153
3.2.4	Desymmetrization Analysis for Paspaline	156
3.3	Results and Discussion	157
3.3.1	Transannular Cyclization Strategy	157
3.3.2	Donor-Acceptor Cyclobutane Annulation Studies	158
3.3.3	Tetrahydropyran Synthesis via Tandem Alkylation/Michael Addition	160
3.3.4	Access to the C4a Stereocenter	160
3.3.5	Indole/Pyran Fragment Coupling: A Non-trivial Operation	161
3.3.6	Decarboxylative Annulation Approach to D,E Rings	163
3.3.7	Development of an Enantioselective Desymmetrization Strategy	164
3.3.8	Enantioselective Desymmetrization: Substrate Preparation	165
3.3.9	Development of a “Global” Enantioselective Desymmetrization	166
3.3.10	F-Ring Synthesis and C2 Stereocenter: An Unexpected Stereocontrol Element	167
3.3.11	Synthesis of Paspaline via “D-Ring First” Approach	169
3.3.12	Attempts to Install C12c Quaternary Stereocenter	170
3.3.13	Paspaline “Methyl Group-First” Approach via Diels Alder Reaction	172
3.3.14	Investigation of Alternative Methyl Group-First Annulation Modes	173
3.3.15	Development of an Ireland-Claisen Rearrangement Approach to Paspaline	175
3.3.16	Investigation of Higher Order Esters in the Ireland-Claisen Rearrangement	177
3.3.17	Development of a “Local” Desymmetrization of C12b Dimethyl Group	178
3.3.18	Synthesis of Paspaline C-Ring and Incorrect C6a Stereocenter	180

3.3.19	Substrate Directed Hydrogenation for Access to C6a	
	Stereocenter	182
3.3.20	Indolization and Synthesis Completion	183
3.4	Conclusion	185
3.5	Experimental Details	185
