Contents

1 Introduction 1
1.1 Background 1
1.2 State of the Art in Wind Farm Power Control 2
1.3 Scope of Monograph 4

2 Single Wind Turbine Power Generation Systems 7
2.1 Introduction 7
2.2 Mathematical Model 8
2.2.1 Electrical Dynamics 8
2.2.2 Mechanical Dynamics 10
2.3 Nonlinear Dual-Mode Control with Uncertainties 12
2.4 Controller Design 14
2.4.1 Rotor Voltages Subcontroller 14
2.4.2 Electromagnetic Torque Subcontroller with Uncertainty Estimation 15
2.4.3 Polar Angle and Desired Rotor Angular Velocity Subcontroller 20
2.4.4 Blade Pitch Angle Subcontroller 23
2.5 Simulation Results 23
2.6 Concluding Remarks 25

3 Approximate Model for Wind Farm Power Control 29
3.1 Introduction 29
3.2 Models of Wind Turbine Control Systems 32
3.2.1 Analytical Model 32
3.2.2 Empirical Model 34
3.2.3 Discussion 34
3.3 Proposed Approximate Model 35
3.3.1 Approximating the Analytical Model 35
3.3.2 Approximating the Empirical Model 41

3.4 Model Validation 44
3.4.1 Wind Turbine Model for General Electric 3.6 and 1.5 MW Turbines 44
3.4.2 WTCS Models from Literature and from Real Data 45
3.4.3 Validation Settings 47
3.4.4 Validation Results 47
3.5 Concluding Remarks 51

4 Model Predictive and Adaptive Control of Wind Farm Active Power Output 53
4.1 Introduction 53
4.2 Wind Farm Model and Problem Formulation 56
4.2.1 Wind Speed Model 56
4.2.2 Wind Turbine Control System Model 57
4.2.3 Problem Statement 60
4.3 Wind Farm Controller Architecture 60
4.3.1 Rationale Behind Architecture 60
4.3.2 Controller Block Diagram 63
4.4 Model Predictive Controller on Outer Feedback Loop 64
4.4.1 Forecasts of Slow Wind Speed Components 64
4.4.2 Optimization of Desired Power Trajectories 65
4.5 Adaptive Controller on Inner Feedback Loop 72
4.5.1 Estimation of Wind Speed Parameters 72
4.5.2 Proportional Controllers and Feedforward Gains 73
4.5.3 Optimization of Proportional Controller Gains 74
4.6 Simulation Results 80
4.6.1 Model Predictive Controller in Isolation 80
4.6.2 Adaptive Controller in Isolation 82
4.6.3 Overall Wind Farm Controller 86
4.7 Concluding Remarks 89

5 Quasilinear Control of Wind Farm Active Power Output 91
5.1 Introduction 91
5.2 Model and Problem Formulation 92
5.2.1 Wind Farm Control System 92
5.2.2 Wind Turbine Control System Model 93
5.2.3 Existing Wind Farm Controller Design 95
5.2.4 Problem Statement 97
5.3 QLC-Based Wind Farm Controller Design 98
5.4 Performance Evaluation 101
5.4.1 Evaluation Scenarios 101
5.4.2 Evaluation Results 103
5.5 Concluding Remarks 107

6 Achievability of Kinetic Energy Release in Wind Farm Active Power Control 109
6.1 Introduction 109
6.2 Wind Farm Model 112
6.3 Limitations of the Notion of Wind Farm Capacity 114
6.4 Concept of Achievability 118
6.5 Characterization of Achievability 119
6.5.1 Analytical Method 120
6.5.2 Numerical Method 121
6.6 Illustrative Examples 124
6.7 Concluding Remarks 126

7 Conclusion 129

Control and Operation of Grid-Connected Wind Farms
Major Issues, Contemporary Solutions, and Open Challenges

Jiang, J.N.; Tang, C.Y.; Ramakumar, R.G.

2016, XIII, 139 p. 39 illus., 5 illus. in color., Hardcover
ISBN: 978-3-319-39133-5
