

Contents

1	Electric Machines and Power Electronics	1
1.1	Outline	1
1.2	Main Types of Power Generators	4
1.2.1	Asynchronous Generators	4
1.2.2	Synchronous Generators	9
1.3	Main Types of Multi-phase Machines	12
1.3.1	The 6-Phase Synchronous Machine	12
1.3.2	Doubly-Fed Reluctance Machine	15
1.4	Main Types of Power Electronics	20
1.4.1	Voltage Source Converters	20
1.4.2	Inverters	21
1.4.3	Active Power Filters	24
1.4.4	DC to DC Converters	26
1.4.5	Fuel Cells	27
1.4.6	Batteries	31
1.5	Components of the Transmission and Distribution System	35
1.5.1	Power Transformers	35
1.5.2	AC Lines	37
1.5.3	HVDC Lines	40
2	Control of the Functioning of Doubly-Fed Induction Generators	43
2.1	Outline	43
2.2	Flatness-Based Control of the DFIG in Successive Loops	44
2.2.1	Overview	44
2.2.2	Field Orientation for Induction Machines	46
2.2.3	Differential Flatness of the Doubly-Fed Induction Generator	49
2.2.4	Control of the Doubly-Fed Induction Generator	53
2.2.5	Flux and Rotation Speed Estimator	55

2.2.6	Implementation of the EKF for Sensorless Control of the DFIG	57
2.2.7	Estimation of the Wind-Generated Mechanical Torque Using EKF.	58
2.2.8	Simulation Tests	60
2.3	Control of the DFIG Based on Global Linearization Approaches	63
2.3.1	Outline	63
2.3.2	Input-Output Linearization of the DFIG Using Lie Algebra Theory	64
2.3.3	Differential Flatness for Nonlinear Dynamical Systems	67
2.3.4	Input-Output Linearization of the DFIG Using Differential Flatness Theory	68
2.3.5	Kalman Filter-Based Disturbance Observer for the DFIG Model	72
2.3.6	Simulation Tests	74
2.3.7	Input-Output Linearization of the DFIG Model with Use of Lie Algebra	77
2.4	Nonlinear H-Infinity Control of DFIGs	81
2.4.1	Outline	81
2.4.2	Approximate Linearization of the Doubly-Fed Induction Generator's Dynamic Model	82
2.4.3	The Nonlinear H-Infinity Control	84
2.4.4	Lyapunov Stability Analysis	86
2.4.5	Simulation Tests	89
2.5	Flatness-Based Adaptive Fuzzy Control of DFIGs	89
2.5.1	Overview	89
2.5.2	Flatness-Based Adaptive Neurofuzzy Control.	90
2.5.3	Estimation of the State Vector	95
2.5.4	Application of Flatness-Based Adaptive Neurofuzzy Control to the DFIG.	96
2.5.5	Lyapunov Stability Analysis	101
2.5.6	Simulation Tests	108
3	Control of the Functioning of Synchronous Generators	111
3.1	Outline	111
3.2	Flatness-Based Control of Synchronous Generators	112
3.2.1	Outline	112
3.2.2	Lie Algebra-Based Design of Nonlinear State Estimators	114
3.2.3	Nonlinear Observer Design for Exactly Linearizable Systems	115
3.2.4	Differential Flatness for Nonlinear Dynamical Systems	119

3.2.5	Differential Flatness and Transformation into the Canonical Form	121
3.2.6	Differential Flatness of the Synchronous Generator.	122
3.2.7	Robust State Estimation-Based Control of the PMSG.	124
3.2.8	Estimation of PMSG Disturbance Input with Kalman Filtering.	127
3.2.9	Simulation Experiments	130
3.3	Flatness-Based Control of Synchronous Generators in Successive Loops.	135
3.3.1	Outline	135
3.3.2	Flatness-Based Control Through Transformation into the Canonical Form	136
3.3.3	A New Approach to Flatness-Based Control for Nonlinear Power Systems.	137
3.3.4	Closed-Loop Dynamics.	140
3.3.5	Comparison to Backstepping Control	142
3.3.6	Simulation Tests	144
3.4	Stabilizing Control of Synchronous Generators Using Interval Polynomials Theory	145
3.4.1	Outline	145
3.4.2	Stabilization for the Single-Machine Infinite-Bus Model.	147
3.4.3	Kharitonov's Stability Theory	150
3.4.4	Design of the Power System Stabilizer	153
3.4.5	Simulation Tests	154
4	Control of the Functioning of Multiphase Electric Machines	159
4.1	Outline	159
4.2	Nonlinear H-infinity Control of Multi-phase Electric Machines	160
4.2.1	Overview	160
4.2.2	Dynamic Model of the 6-Phase Synchronous Machine	161
4.2.3	State-Space Description of the 6-Phase PMSM	163
4.2.4	The Nonlinear H-infinity Control	166
4.2.5	Lyapunov Stability Analysis	168
4.2.6	Robust State Estimation with the Use of the H_∞ Kalman Filter.	171
4.2.7	Simulation Tests	172
4.3	An H-infinity Approach to Optimal Control of Doubly-Fed Reluctance Machines	175
4.3.1	Overview	175
4.3.2	Dynamic Model of the Doubly-Fed Reluctance Machine	176

4.3.3	Linearization of the Reluctance Machine's State-Space Models	180
4.3.4	The Nonlinear H-infinity Control	181
4.3.5	Lyapunov Stability Analysis	183
4.3.6	Robust State Estimation with the Use of the H_∞ Kalman Filter.	186
4.3.7	Simulation Tests	187
4.4	Flatness-Based Adaptive Control of Brushless Doubly-Fed Reluctance Machines	190
4.4.1	Overview	190
4.4.2	Outline of the Dynamic Model of the DFRM	191
4.4.3	Differential Flatness Properties of the Reluctance Machine	192
4.4.4	Flatness-Based Adaptive Neurofuzzy Control.	195
4.4.5	Application of Flatness-Based Adaptive Neurofuzzy Control to the DFRM.	201
4.4.6	Lyapunov Stability Analysis	206
4.4.7	Simulation Tests	211
5	Control of the Functioning of DC to DC and AC to DC Converters.	213
5.1	Outline	213
5.2	Control of DC to DC Converters	214
5.2.1	Overview	214
5.2.2	Differential Flatness of the Model of a DC-DC Converter Connected to a DC Motor	215
5.2.3	Transformation of the Dynamic Model into the Canonical Form	217
5.2.4	Disturbances Compensation with the Derivative-Free Nonlinear Kalman Filter	218
5.2.5	Simulation Tests	221
5.3	Control of Three-Phase AC to DC Converters	224
5.3.1	Overview	224
5.3.2	Linearization of the Converter's Model Using Lie Algebra	226
5.3.3	Differential Flatness of the Voltage Source Converter	230
5.3.4	Kalman Filter-Based Disturbance Observer for the VSC Model	234
5.3.5	Simulation Tests	236
5.4	Nonlinear H-Infinity Control of VSC	239
5.4.1	Outline	239
5.4.2	Linearization of the Voltage Source Converter's Dynamic Model.	240

5.4.3	Nonlinear H-infinity Control for the Three-Phase VSC.	242
5.4.4	Lyapunov Stability Analysis	244
5.4.5	Simulation Tests	246
5.5	Control of the VSC-HVDC Transmission System.	250
5.5.1	Outline	250
5.5.2	Lie Algebra-Based Linearization of the VSC-HVDC Dynamics	252
5.5.3	Differential Flatness of the VSC-HVDC System.	255
5.5.4	Flatness-Based Control of the VSC-HVDC System	258
5.5.5	Compensation of Disturbances Using the Derivative-Free Nonlinear Kalman Filter.	261
5.5.6	Simulation Tests	263
6	Control of the Functioning of DC to AC Converters	267
6.1	Outline	267
6.2	Flatness-Based Control of Inverters	268
6.2.1	Outline	268
6.2.2	Lie Algebra-Based Control of the Inverter's Model	269
6.2.3	Differential Flatness of the Inverter's Model	273
6.2.4	Flatness-Based Control of the Inverter	276
6.2.5	State and Disturbances Estimation with Nonlinear Kalman Filtering	279
6.2.6	Simulation Tests	280
6.3	Flatness-Based Adaptive Control of Active Power Filters	283
6.3.1	Overview	283
6.3.2	Dynamic Model of the Active Power Filter	284
6.3.3	Application if Flatness-Based Adaptive Fuzzy Control to Inverters	285
6.3.4	Flatness-Based Adaptive Control for Active Power Filters.	288
6.3.5	Lyapunov Stability Analysis for the Active Power Filter	291
6.3.6	Simulation Tests	295
7	Control of Fuel Cells and Batteries.	297
7.1	Outline	297
7.2	Flatness-Based Control of PEM Fuel Cells	298
7.2.1	Outline	298
7.2.2	Linearization of the Fuel Cells Dynamics	299
7.2.3	Linearization of the Fuel Cells Dynamics Using Lie Algebra	304
7.2.4	Flatness-Based Control of the Nonlinear Fuel Cells Dynamics	305
7.2.5	Simulation Tests	308

7.3	Nonlinear H-Infinity Control of PEM Fuel Cells	310
7.3.1	Overview	310
7.3.2	Linearization of the PEM Fuel Cells Model.	310
7.3.3	Design of an H-Infinity Nonlinear Feedback Controller	313
7.3.4	Lyapunov Stability Analysis	315
7.3.5	Simulation Tests	319
7.4	Control of the Diffusion PDE in Li-ion Batteries	322
7.4.1	Modeling in State-Space Form of the Li-ions Diffusion PDE.	327
7.4.2	Differential Flatness of the Battery's PDE Diffusion Model.	328
7.4.3	Computation of a Boundary Conditions-Based Feedback Control Law	329
7.4.4	Closed Loop Dynamics.	331
7.4.5	State Estimation for the PDE Diffusion Model.	333
7.4.6	Simulation Tests	336
8	Synchronization and Stabilization of Distributed Power Generation Units	339
8.1	Outline	339
8.2	State Estimation-Based Control of Distributed PMSGs	341
8.2.1	Outline	341
8.2.2	Dynamic Model of the Distributed Power Generation Units	343
8.2.3	Linearization of the Distributed Power Generation System Using Lie Algebra	345
8.2.4	Differential Flatness of the Distributed PMSG Model.	348
8.2.5	Estimation of PMSG Disturbance Input with Kalman Filtering.	352
8.2.6	Simulation Experiments	354
8.3	Nonlinear H-Infinity Control of Distributed Synchronous Generators	358
8.3.1	Overview	358
8.3.2	Dynamic Model of the Multi-machine Power System	359
8.3.3	Linearization of the Model of the Distributed Synchronous Generators	362
8.3.4	The Nonlinear H-Infinity Control	363
8.3.5	Lyapunov Stability Analysis	365
8.3.6	Robust State Estimation with the Use of the H_∞ Kalman Filter.	368
8.3.7	Simulation Tests	369

8.4	Flatness-Based Adaptive Control of Distributed PMSGs	369
8.4.1	An Adaptive Fuzzy Control for the System of the Distributed Synchronous Generators	372
8.4.2	Flatness-Based Adaptive Fuzzy Control for MIMO Nonlinear Systems	374
8.4.3	Application of Flatness-Based Adaptive Fuzzy Control to the Distributed Power Generators' Model.	379
8.4.4	Lyapunov Stability Analysis	384
8.4.5	Simulation Tests	390
8.5	Control and Synchronization of Distributed Inverters	391
8.5.1	Outline	391
8.5.2	Dynamic Model of the Inverter	396
8.5.3	The Synchronization Problem for Parallel Inverters	397
8.5.4	State and Disturbances Estimation of Parallel Inverters with Nonlinear Kalman Filtering.	401
8.5.5	Simulation Tests	403
9	Condition Monitoring and Fault Diagnosis for Electric Power Generators	411
9.1	Outline	411
9.2	Fault Diagnosis for Distributed Power Generators Using Kalman Filtering.	413
9.2.1	Overview	413
9.2.2	Dynamic Model of the Multi-machine Power System	414
9.2.3	Linearization of the Power Generation System Using Differential Flatness Theory	416
9.2.4	Fault Detection with the Use of Statistical Criteria	419
9.2.5	Disturbances Estimation with the Derivative-Free Nonlinear Kalman Filter	421
9.2.6	Simulation Tests	424
9.3	Neural Network-Based Fault Diagnosis in Distributed Power Generators.	427
9.3.1	Outline	427
9.3.2	Power System Faults and Cascading Events	431
9.3.3	Neural Networks for Power System Identification.	433
9.3.4	Fault Diagnosis for Electric Power Transmission Systems	436
9.3.5	Simulation Tests	442
9.4	Fault Diagnosis for Power Generators Using Spectral Analysis Methods	447
9.4.1	Outline	447
9.4.2	Feed-Forward Neural Networks for Nonlinear Systems Modelling.	448
9.4.3	Neural Networks Using Hermite Activation Functions	450

9.4.4	Signals Power Spectrum and the Fourier Transform.	453
9.4.5	Gauss-Hermite Modeling of Electric Power Generators.	456
9.4.6	Fault Diagnosis for Doubly-Fed Induction Generators.	458
10	Condition Monitoring of the Electric Power Transmission and Distribution System.	463
10.1	Outline.	463
10.2	Fault Diagnosis in Power Transformers Using Statistical Signal Processing.	464
10.2.1	Outline.	464
10.2.2	Reasons for Failures in Electric Power Transformers.	466
10.2.3	Condition Monitoring Methods for Power Transformers.	467
10.2.4	Fault Management Practices for Power Transformers.	469
10.2.5	Analytical Thermal Model of Electric Power Transformers.	469
10.2.6	Neuro-Fuzzy Modelling of Power Transformers’ Thermal Condition.	471
10.2.7	Simulation Tests	473
10.3	Distributed Filtering for Condition Monitoring of the Electric Power Grid	477
10.3.1	Outline.	477
10.3.2	State of the Art in State Estimation and Fault Diagnosis for the Power Grid	479
10.3.3	Fault Diagnosis in the Power Transmission and Distribution System	483
10.3.4	State Estimation with the Extended Information Filter	484
10.3.5	State Estimation with the Unscented Information Filter	489
10.3.6	State Estimates Fusion with the Covariance Intersection Method	493
10.3.7	Simulation Tests	496
10.3.8	Distributed State Estimation for Detection of Voltage Dips and Harmonics Variation.	498
	Glossary.	507
