

Contents

1	Introduction	1
1.1	Overview	1
1.1.1	Related Works on Contact-State (CS) Modeling	2
1.1.2	Related Works on Robots Control	5
1.1.3	Related Works on Peg-in-Hole Searching Algorithms	7
1.2	Problem Description and Objectives	8
2	Contact-State (CS) Modeling	13
2.1	Problem Statement	13
2.2	Gravitational Search–Fuzzy Clustering Algorithm (GS–FCA)	15
2.2.1	T–S Fuzzy Modeling	16
2.2.2	T–S Fuzzy Models Parameters Estimation	17
2.2.3	Antecedent Part Parameters Estimation	17
2.2.4	Consequent Part Parameters	20
2.3	Expectation Maximization-Based Gaussian Mixtures Model (EM-GMM)	21
2.3.1	Bayesian Classification	22
2.3.2	Gaussian Mixtures Model (GMM)	23
2.3.3	Expectation Maximization (EM)	24
3	Control of Unknown Switched Constraints Robots	29
3.1	Problem Formulation	29
3.2	Adaptive Sliding Mode Control (ASMC) Strategy	30
3.3	Improved Robust Adaptive Control (IRAC) Strategy	33
3.3.1	Robust Control (RC) Strategy	34
3.3.2	Robust Adaptive Control (RAC) Strategy	35
3.3.3	Improved Robust Adaptive Control Strategy (IRAC) Strategy	36
3.4	Robust Adaptive Fuzzy Control (RAFC) Strategy	38
3.4.1	Fuzzy Logic Approximators (FLA)	38
3.4.2	Robust Adaptive Fuzzy Control (RAFC) Design	39

3.5	Robot Control Decentralization	41
3.5.1	Problem Reformulation	41
3.5.2	Decentralized Robust Control (DRC) Design	43
3.5.3	Decentralized Robust Adaptive Control (DRAC) Design	44
3.5.4	Enhanced Decentralized Robust Adaptive Control (EDRAC) Design	45
3.5.5	Decentralized Robust Adaptive Fuzzy Control (DRAFC) Design	47
3.5.6	Object Flexibility Accommodation	49
3.5.7	Hybrid Position/Force Control	50
4	Position Uncertainty Accommodation	53
4.1	Problem Description	53
4.2	Hole Position Identification.	53
4.2.1	The Spiral Search Path	54
4.2.2	The Proposed Position Identification Algorithm.	57
5	Experimental Validations	65
5.1	Contact-State Modeling	65
5.1.1	Experiment 1: Rigid Cube-in-Corner Assembly.	66
5.1.2	Experiment 2: Rigid Peg-in-Hole Assembly	76
5.1.3	Experiment 3: Flexible Cube-in-Corner Assembly Task-(Neukasil RTV 230 Material)	80
5.1.4	Experiment 4: Flexible Cube-in-Corner Assembly Task-(Neukasil RTV 23 Material)	86
5.1.5	Experiment 5: Flexible Peg-in-Hole Assembly Task-(Neukasil RTV 230 Material)	89
5.1.6	Experiment 6: Flexible Peg-in-Hole Assembly Task-(Neukasil RTV 23 Material)	91
5.1.7	Remarks	91
5.2	Control of Unknown Switched Constrained Robots.	93
5.2.1	Experiment 7: Peg-in-Hole Assembly Processes of Rigid Objects	94
5.2.2	Experiment 8: Peg-in-Hole Assembly Processes of Flexible Objects	100
5.2.3	Notes on the DRAFC Strategy	101
5.3	Position Identification	106
5.3.1	Experiment 9: Peg-in-Hole Assembly Process of Rigid Object.	106
5.3.2	Experiment 10: Peg-in-Hole Assembly Process of Flexible Object.	109
5.3.3	Experiment 11: The Entire Peg-in-Hole Assembly Processes	111
5.3.4	Remarks on the Position Identification Strategy.	113

6 Industrial Applications	117
6.1 Application 1: Cylinder Head Camshaft Caps Assembly	117
6.2 Application 2: Powertrain Air-Intake Manifold Assembly	119
7 Miscellaneous Topics	121
7.1 Human Error Identification in CS Modeling	121
7.1.1 Human Errors in the CS Modeling Process	121
7.1.2 The Suggested Human Error Identification Scheme	122
7.1.3 Experiment 12	126
7.2 Enhanced Impedance Parameters Estimation	129
7.2.1 Problem Formulation	130
7.2.2 Signals Smoothing-Based Enhanced Impedance Parameters Estimation	131
7.2.3 Experiment 13	135
Appendix A	137
Appendix B	143
Appendix C	163
Appendix D	169
Appendix E	171
References	175

Force-Controlled Robotic Assembly Processes of Rigid
and Flexible Objects

Methodologies and Applications

Ghalyan, I.F.J.

2016, XXI, 184 p. 93 illus., 70 illus. in color., Hardcover

ISBN: 978-3-319-39184-7
